Message-ID: <t51e5ov7a290e@corp.supernews.com>
Source record: 16562

I'd mentioned in a previous post that in the middle of May 1983,
the CBS RAD}}|((O NETWORK changed the sounder(s)...

The News sounder was a "pure-tone" single-freq. pitch of the
traditional melody, instead of the "real sounding organ" of 1968
(thru early-May 1983).

This "pure-single-pitch-tones" only lasted a week or two.

By the end of May, they went to the sounder for the newscasts
(and NetALERT bulletins) that was a bit more like the "organ"
sound of 1968 thru early May 1983, i.e., harmonics, etc., but
electronic/synthesized. This continued thru and including the
11am EST hourly newscast, Tuesday 26 December 2000.

Also, in May 1983, the Sports jingle/sounder was modified. Yes,
it was still the 1968 melody, and followed the 1968 sounder style
for Sports (Sports Central USA, Weekend Worldwide Sports, Sportstime,
Worldwide Sports, Sports World Roundup, Pat Summerall's Sports, etc),
but it too was electronicized/synthesized, similar to the way the
news sounder was.

THIS SPORTS SOUNDER of May 1983 is STILL in use. Just a few mins
ago (6:15pm EST, 5:15pm CST), I was listening to WTIX Radio 690.
On Sunday afternoons, the OWNER, Mr.George Buck hosts (from his
own residence, wired to the studios some 15 miles away, via wideband
telco lines) his own "Golden Era of Radio", i.e., his own tapes of
radio commedies/dramas/etc. from the 1930's thru 60's. This runs
(Central Time) from 12-Noon to 6:00pm. I tape the ENTIRE 6-hours
every week, onto the audio track of a 6-hr VHS tape, by patching the
headphone jack of the radio into the aux-audio-input of the VCR, and
setting the channel to EXT/AUX/CAMERA/LINE (whatever).

The WTIX studios are automated. The automation will kick-in the
line to Mr.Buck's residence at approx 6 min after the hour, and cut
away from him and over to the Westwood/CBS/Infinity satellite channel
for "NBC", which except for M-F morning hours, is "CNN Radio" hourly
news. However, the (former) NBC satellite channels use the NBC
Hotline "gurgle" sounding auto-tones, even for feeds of CNN and other
CBS/Westwood/etc. feeds that go over (former) NBC sat channels.

Similarly, the sat channels that used to be for Mutual, still use
the MutALERT "Bee-doop" auto-tones.

Of course, the sat-channels for the REAL CBS (if you can still call
it that) are still feeding the NetALERT "phase-II 1978->on" squeaky
chirps for auto-tones.

Anyhow, when WTIX isn't running owner Mr.Buck's live hosted programs on Sundays remote from his residence, or some live local talk show at the studios, or some tape paid program from the studios, they are automation-switched into TalkAmerica Network, except for the hourly (Westwood/NBC-Radio) CNN Radio newscasts.

At 5:00pm CST today, the WTIX automation switched Mr.Buck's live hosting remote for "Golden Era of Radio" out, and kicked in the sat channel for (NBC) CNN Radio news.

However, at 5:05 or 5:06pm CST today, the automation did *NOT* switch back to Mr.Buck's residence remote hosting of OTR! :(

HOWEVER, the station automation didn't kick-in TalkAmerica neither.

IT KEPT CNN/NBC side of Westwood/CBS on the air!!!

I heard the (old) NBC-Hotline "gurgle" auto-cue-tones, and then a "generic" Westwood/CBS/Unistar/Infinity closed cct newsfeed of cuts over WTIX-690 am.

Then, at about 5:15pm CST, more (old) NBC-Hotline "gurgle" cue-tones, then the 1983-to-today CBS Radio SPORTS sounder, with the sportscaster saying "Sports Central USA from CBS Radio Sports".

At the end (3? 5? min later), the announcer closed out "Sports Central USA, CBS Radio Network" followed by NBC-Hotline "gurgle" cue-tones!

I do miss hearing the late Win Elliot though... who had been with the CBS Radio Network going back to the early 1950's (or even earlier?) He used to do all kinds of fun "ad-libs" on CBS Radio's Sports-Central USA in the 1970's, including "Win Elliot, Sports Central USA on the Columbia Broadcasting System"... or if running late, instead of the regular "outcue", he would close out: "Hey folks, we're WAY over, BYE!".

ALSO, I don't know if Capitol Cloakroom or the World of Religion or Science Editor still is around on the CBS Radio Network or not... Also I don't know if Face the Nation (which I guess is still on CBS Television) still has an audio feed over CBS Radio...

But ALL of these longer-form features had their OWN unique 1968-origin sounder/jingle, using the melody, but in their own instrumentation and style. This sounder/jingle as well was modified a bit (synthesized) in May 1983.

BTW,
AS I COMPOSE this, the engineer went over to WTIX' studios, and corrected the automation problem. George Buck came back on, and said that from 6:05 to 7pm (which is usually the first Sunday nite hour of the TalkAmerica Network on WTIX), since he wasn't on from 5-to-6pm CST tonite, that instead he'll do his own tapes from his residence of Old Time NBC and CBS Dance Band / Big Ban Remotes from across the USA, on 31-Dec from various years of the 40's and 50's, as each time-zone

rang-in-the-New Year! (It's playing now on WTIX, the tapes of the old CBS/NBC Radio big dance band New Years' Eve remotes, FILLED with the Bell System's 5.0 Khz acoustic audio quality! :-)

Of course, I *AM* taping this! :-)

Happy New Year/Century/Millenium, which all begins at 00:00:00 local time, on 01/01/2K PLUS-01, *NOT* 366 days ago!

The news sounder regularly heard on the World Service, D-B-G-F-E, C-A-F-C. You're right, it's probably not heard ahead of every short form newscast, but neither is it exclusive to one program. Lili Bolero hasn't been completely banned; I've heard it within the past three weeks.

Looking forward to the BBC pips as the planet officially enters the third millennium, at zero UTC, 01/01/001, about five hours from now as I write. Greetings to all.

Jerome

Overnight radio host Herb Jepko's broadcasts on the Mutual Network in the mid-'70's were part of the reason I got into broadcast radio. For nostalgia, I'd like to acquire any decent-quality audio of his Mutual shows, especially the jingle (sung, sort of Sergio Mendes/Brasil '66-style, "The Nightcap Radio Network...your nighttime radio service for North America").
I would appreciate anyone who could provide this material at a reasonable price. Thanks!

Keith

Rich Wood <richbwood@compuserve.com> wrote:

"Let's do another analogy. If exposure of a product is enhanced by theft of that product then General Motors should be happy when cars are stolen from dealers' lots and put on the road."

You're making the mistake of assuming that copyright infringement is exactly the same as theft. It isn't. If it were, all infringements would be criminal acts -- which most are not -- and there would be no exemptions for fair uses.

A better analogy would be if someone started manufacturing and selling unauthorized copies of Corvettes, Park Avenues, Suburbans, etc. GM wouldn't lose any of its product to theft in this scenario, but it may well lose some of the opportunity it had to sell those products. *That* is the harm done, if any, when copyrights are infringed, and the harm depends on how that intellectual property is used by the alleged infringer.

No its not. They actually did a decent job keeping the same theme, but modernizing it.

The old one was old and dated. Updating the sounder was long, long overdue.

NPR should run a nationwide contest to see who's king of the
noncom rimshot club. My stations are

WAER-Jazz 88.3 Syracuse,
WRVN 91.9 Utica,
WMHT 89.1 Schenectady,
Vermont Public Radio 94.3,
the doppelgangers WAMC/WCAN Albany and Canajoharie
and WCNY/WUNY Syracuse and Utica
and true local WSQC 91.7-Oneonta, gracious enough not to insist I
obtain a waiver to listen to the others.

Honorable mention also to 89.9, where I'm within range of both
WRVO and North Country Public Radio. I receive either when the
other is off the air but not really usable the rest of the time.
My little hamlet is also the rough borderline between four
different library systems, so I can borrow books in Albany,
Schenectady, Binghamton or Utica and drop them off at nearby
locations for each system.

Jerome

8. The End of Commercial Free-Form Radio in New York

Newsgroup: rec.radio.broadcasting
Date: 2001-01-01 17:05:05 UTC
From: tbetz@panix.com
Message-ID: <t51e61gisbsn18@corp.supernews.com>
Source record: 16570

Vin Scelsa is doing his last Idiot's Delight show on WNEW as I type this, signifying the very end of an era. To the best of my knowledge, his was the last surviving free-form radio show (he plays exactly what he feels like when he feels like it, within the time limitations of the scheduled spots) on commercial radio, certainly in New York City, and possibly in the nation. (I'd very much like someone to point out another case, if one exists.)

For example, the last set started with a song from Sondheim's "Into The Woods", then Tony Bennett, The English Beat, Nat King Cole, ending with Kirsty McCall.

Over the last 16 years, first at WXRK and then at WNEW, his program was the last bit of art floating on the pool of commerce, like a lotus on mud.

His voice, still available three days a week over the web at liveatlunch.com, will be sorely missed over New York's air.

Although it doesn't feature musical selections per se' in the same way that Vin Scelsa's show did, why wouldn't Howard Stern's radio program also be considered as "free-form" ?

According to a DXer in South Africa, copies ordered directly form England
have already been received.

Unfortunately, the publication has been going downhill for the last 5 years
or so. The Latin American section is a bout as useful as wheels on a fish.

OK, you're the second person to mention Hyman Brown as the host, but I just
don't ever remember him hosting it. It was always E.G. Marshall. Maybe they
remastered the shows and used another host? Or original host? I don't know.

All I know is when I taped the shows off of the air (I have three cassettes
with six shows total) back around 1990 or so, the host was E.G. Marshall. That
is the host who is on the tape that I recorded off the air with.

| >wonder if some goofball exec thinks this will impact ratings.
|
| Why would sounders on radio be less important than some "droid" at
| General Motors thinking up cup holder placements?

Well, one important factor is to give the listener a break from a constant stream of voices. Having jingles on all-news stations may be taking that principle just a bit too far, but sounders and musical bridges and the like can help spice things up a bit without impacting content at all. They're also a great way of signalling the start of something you might want to hear (or, for me, a sports sounder tells me I can tune out for a couple of minutes).

The lesson must have something to do with how LPFM would have stepped
in to fill the void. I'm certain all of them would have had complete
news and weather staffs backed up by emergency generators to cover
their little plot of turf.

Either that or a preacher telling us that Armageddon is here and your
money will have no further use, so send it in.

Saw one today in Currys, Basingstoke.

Obviously the staff didn't know what the f***
it was, or how to use it, so it was sat alone
in a dark corner on its carton, totally neglected without a label,
price..etc

IMHO the build quality was poor. Nasty sharp edges,
and the tuning knob 'scuffed' the fascia as I turned
it.

Wasn't powered up, connected to an amp, or an aerial;
so how the store expect to sell it, I don't know.

One of the first things I brought up to our CBS rep when I took over at Ops Director at WPTF Raleigh, was to please change the news sounder...it was so old school...right out of the Telstar days. I was abruptly and sternly told that that was just not going to happen..."there is too much history behind that sounder...its our signature." Well four years later I guess somebody wised up. I like it...gives the newscast a faster pace...one which I think Christopher Glenn will have trouble keeping up with. :-)

Here's something I posted back in 1994 when I still lived in Kansas City.

As an aside, Popular Communications asked in April 1994 for reports from its readers. If you have access to back issues of PopComm, there may indeed be some reports in there.

(The ISP mentioned below is long defunct)

From: transvox@tyrell.net (Mark Roberts)
Newsgroups: rec.radio.broadcasting
Subject: Eclipse Watchers -- Kansas City
Followup-To: rec.radio.broadcasting
Date: 12 May 1994 01:40:41 GMT
Organization: Tyrell Corporation - (816) 459-7584 - (800) TYRELL-1
Lines: 53
Approved: rrb@airwaves.chi.il.us
Distribution: world

I took a long lunch today (May 10), drove home, and listened to the solar eclipse.
Observations of the eclipse's effect on the radio dial in south-central Kansas City:
* KFRM (550, Salina, Kansas) could be received in the car without any interference from KSD St. Louis at 11.30 am. The signal was not terribly strong, but the lack of interference was unusual.
* KFDI (1070, Wichita, Kansas) registered a two (on a scale of five) on my home tuner's signal strength indicator at 11.45 am (the peak of the eclipse). Half an hour later, it was back at zero though still barely audible.
* KFSB (1310, Joplin, Missouri) registered a three at about 11.55 am. Normally, I do not receive this station. It appeared to be simulcasting its FM station, which is a real comedown for one of southwest Missouri's high-coverage signals.
* KKLL (1100, Webb City, Missouri) registered a two on the tuner at about the same time. I didn't listen for long; I can normally get it only in the car; normally, it runs a format (Christian easy-listening) that is quite avoidable.
* Traces of KGBX (1260, Springfield, Missouri) were heard at around

12 noon. Normally, it doesn't make it up here at all. I didn't try
KWTO at 560; it usually comes in up here OK.
* While on the way home in the car, I listened to the station at
1530 in Butler, Missouri (KMAM). This small-town station had enough
creativity to drag a microphone or two out to its parking lot and have
its DJs describe what they were seeing and talk to people driving up,
asking what they thought of the eclipse and what they were seeing.
Little KMAM was doing a better job of being an on-the-spot radio
station than the big-city (and not-so-big-city) talk stations relaying
the bloated blathering of Rush Limbaugh, whose career ought to go into
eclipse.
Conclusion: The eclipse seemed to give a bit of a boost on signals
that normally come in very weakly at midday.
I couldn't do a comprehensive scan because of my center-city
location (quite a bit of interference from WDAF and KMBZ where I live
-- and KMBZ interference will be worse at my new location, where I
think I'll be able to SEE the strange tower-and-a-half DA that KMBZ
uses) and because I did have to get back to work!
Also wild was to see the Kansas City skyline from the roof of
Hallmark at about 11.30 am -- we had a crystal clear day, yet the light
was as dim as it normally is at about 8 o'clock at night.
Did anyone else try radio listening during the eclipse?

I was listening to a part of the Howard Stern show yesterday morning, just for the heck of it. Of course I know Howard is notorious for FCC rule violations, but today I heard him talk for almost 40 minutes straight (from 6:35 to 7:15) which caused the local affiliate (KYNG) to delay the legal ID. I thought'd they'd do it right at the start of the commercial break, but instead they played 6 spots in a row and then did the ID. By that time it was 7:21.

Is there some provision for the program which says affiliates can delay the legal ID that long? I know it can be anywhere between 10 minutes before to 10 minutes after the hour, but clearly KYNG (and all the other affiliates I presume) were late with the ID because of this. What's the deal here?

Just curious

Thanks!

>signal-wise, and that the multi-station cast is definitely needed in
>that market.

I can say from personal experience that WTOP (1500) is marginal at night and in the early morning drive time along I-70 from Baltimore to Frederick. Often I get nearly as much sky wave as ground wave and of course, they're out of phase...

In fairness, many Balitmore stations are even worse. WBAL (1090) in the evenings goes through deep selective fades not far outside the Baltimore beltway west on I-70.

On the other hand, WMAL (630) gets through most of the time with a reasonable signal and no skywave cancellation. Maybe the lower frequency (higher ionospheric absorbtion) has something to do with it...

So there are stations in the DC market that radiate well. Too bad WTOP isn't one of them. I wish they would fix that problem instead of eating up stations in other markets.

|Although it doesn't feature musical selections per se' in the same way that
|Vin Scelsa's show did, why wouldn't Howard Stern's radio program also be
|considered as "free-form" ?

No, I'd consider it "raunch radio". It's a definite format, one that is
being emulated all over the dial, and it's as strict (and as commercially
successful) a format as any out there.

If he ever diverged from his format, if (for example) he ever engaged in serious
discussion of anything meaningful to a demographic outside of males 13-35, Stern
would be out of business, and he knows it.

|
| Unfortunately, the publication has been going downhill for the last 5 years
| or so. The Latin American section is a bout as useful as wheels on a fish.
|
I feel that it's been a bit longer than that. The format of the
publication hasn't worked very well for countries with extensive
private broadcasting systems. The WRTH had been doing a decent job
of keeping up with parts of Europe. But I think they've kind of
given up. They may be better off recasting it as a shortwave-only
publication since that is, in effect, what it has become.

I never felt its coverage of Latin America was very good (perhaps
with the exception of Brazil and some of the smaller countries).
As far as United States coverage is concerned, forget it: there are
far better sources (the M Street book being the best).

WTOP has a very deep night null toward KSTP - and Frederick ;) They
also slight this direction with their day pattern.

> In fairness, many Balitmore stations are even worse. WBAL (1090) in
> the evenings goes through deep selective fades not far outside the
> Baltimore beltway west on I-70.

WBAL in ND days, but a very deep null to the west (read I-70) at night.

> On the other hand, WMAL (630) gets through most of the time with a
> reasonable signal and no skywave cancellation. Maybe the lower
> frequency (higher ionospheric absorbtion) has something to do with
> it...

No, it's mostly their pattern.

> So there are stations in the DC market that radiate well.

Name them, please. The only other DC-area station that I know to have
decent night coverage is 980, whatever its call is this week. 570
doesn't even have enough night signal over DC to be allowed to be
licensed to DC. 1260 is a joke at night. 1150, 1390, 1460, and 1600 are
marginal suburban stations. That's all there are at night except a
couple of stations on 1340 and 1450.

> Too bad
> WTOP isn't one of them. I wish they would fix that problem instead of
> eating up stations in other markets.

You have a distorted view of WTOP's coverage. They have good skywave
coverage up and down the east coast at night. You can't expect them to
cover to the northwest in the direction of the only other class A
station on 1500. This is not about to change, having been cast in
concrete at least as early as 1940.

If you wade through the night patterns of the stations along the eastern
seaboard you will find that all but the very oldest have nulls to the
west. These are required to protect the many cochannel station in the
midwest and beyond. WTOP (having gone high power about 1930) is NOT
among the "very oldest". 630 and 980 are.

Bob C.

41. CBS RAD))|((O Mystery (and Adventure) Theater

Newsgroup: rec.radio.broadcasting
Date: 2001-01-03 23:52:09 UTC
From: "Mark J. Cuccia" <mcuccia@tulane.edu>
Message-ID: <t57ep9lbhhp7ae@corp.supernews.com>
Source record: 16402

Regarding CBS Radio's Mystery (and Adventure) Theater of the 1970's:

Mystery Theater ran on the Network from Jan.1974 thru Dec.1982. Adventure Theater ran on the Net from Feb.1977 thru Jan.1978.

Himan Brown was the producer of both, *in association with* the CBS RAD))|((O NETWORK.

I don't know when Mystery Theater stopped producing "new" ep's, but there were probably new productions well into 1981, maybe even 1982. However, reruns were already popping in by mid-1974, only a few months into its original run! You'd have a rerun here or there, and then more repeats slipping in, with fewer "new" episodes.

Mystery Theater ran SEVEN nights a week through about the end of the 1970's. By the time it ended the original network feed/run, it was only airing/feeding M-F nights. In 1980 or 81, the weekend feeds/runs were eliminated, but I don't know if they eliminated the Sunday edition and later the Saturday edition, or if they eliminated BOTH Sat/Sun at the same time.

Many affiliates didn't always carry the Sunday ediiton even in the 1970's, probably because of prior paid-religious program committments. When WWL-870 in New Orleans (the CBS Radio affil) carried Mystery Theater, they never ran the Sunday night edition. In early 1977, WWL cancelled their airing of CBS Radio Mystery Theater, but by late 1977, WNPS-1450 (which may have just changed its calls to WWIW-1450, and in 1989 it changed to WBYU-1450 - at the time the NBC Radio affil, and a nostalgic music station, presently affiliated with ABC Radio's Dalls "Stardust" service) picked up the option to Mystery Theater, and carried it 7-nites, but of course, CBS dropped it to five nights by the final original network year (1982).

The "official" CBS Radio affil not desiring Mystery Theater, and having it picked up by an alternate station was *NOT* uncommon.

Five of the seven CBS Radio O&O AMs carried Mystery Theater... WCBS-880 (NY) and KCBS-am (San Francisco) didn't carry it. They felt that Mystery Theater didn't fit into their "all news/information" format. Yet the other five CBS O&O AMs were also "all news" yet they *DID* run Mystery Theater. BTW, I *FREQUENTLY* heard Mystery Theater from CBS-O&O WBBM-NewsRadio 78(0) 50Kw Chicago at 10:30pm Central (on a taped delay from the network feed).

I don't know offhand which San Francisco radio station picked up Mystery Theater when KCBS didn't want it... but WOR-710 NY picked up Mystery Theater when WCBS-NewsRadio-88(0) didn't want it. WOR was also still carrying a lot of Mutual programming at the time.

E.G. Marshall *WAS* the host/narrator of Mystery Theater during its original Network run, 1974-82. But I've heard Himan Brown's voice at least "open up" Mystery Theater (The CBS Radio Mystery Theater presents...) on many syndicated reruns or current CBS/Westwood satellite reruns in more recent years (1989-to-current).

When E.G. Marshall passed away a few years ago, I remember Christopher ("In the News" CBS-TV Sat morn vignettes of the 1970s) Glenn on "The World Tonight" on CBS Radio mentioning the passing AND crediting Marshall as the host of CBS Radio Mystery Theater back in the 70's. (Douglas Edwards was the CBS News anchor for "The World Tonight" for YEARS, and his last W/T on CBS Radio was Good Friday 1-April-1988. I have most of that broadcast on tape and listened to it recently. He retired to Florida and passed away in 1990 or so. Edwards had started with CBS Radio/News in **1943 or 1942**)

Radio ADVENTURE Theater ran on CBS Radio from Feb.1977 to Jan.1978. It aired on Sat and Sun. The series was aimed more towards "kids", and had stories on Moby Dick, Treasure Island, etc. Some were original stories though. There were several "two-parters" that started on Sat and concluded on Sun.

Himan Brown *WITH* CBS produced the series just like they did with Mystery Theater. Much of the MUSIC SCORE on CBS Radio Mystry Th and CBS Radio Adv Theater was the *SAME* music as used on older late 50's and early 60's CBS Radio Dramas (Suspense, Johnny Dollar, the radio edition of Have Gun Will Travel, Gunsmoke radio, Fort Laramie, etc) and also the music as used on CBS *owned/produced* TV dramas of that time as well (the main five: Perry Mason, Twilight Zone, Rawhide, TV Gunsmoke, TV Have Gun Will Travel; and other TV series). Some of this CBS Music Score dates back to the 1930's/40's and early 50's on CBS Radio dramas and early CBS-TV dramas. Much of this CBS music score was composed/conducted by the late Bernard Herrmann, who also composed the music for Hitchcock's movies of he 50's/60's (Vertigo, Marnie, N.by-NW, Trouble with Harry, Psycho, etc)... watching a 50's/60's Hitchcock movie is an experience like watching TZ or Perry Mason, or listening to Suspense, etc. of that era! Herrmann also worked closely with Orson Wells' Mercury Theater players (Agnes Moorehead who was regularly on other CBS Radio dramas, and Ray "Lt.Tragg" Collins) on Wells' CBS Radio dramas, and Wells' RKO Movies of the 30's/40's. Herrmann also composed music for numerous other Movie/Production companies throughout his career as well.

Other composers (most notably Lucien Morawek/Rene Garriguenc, and conducted by Lud Gluskin; but many many others - Lyn Murray, Van Cleve, Franz Waxman, etc.etc.) composed music that CBS Radio/TV used in their OWN OWNED/PRODUCED dramas throughout the "good old

days", and much of this "traditional" score has been heard on CBS Radio Mystery/Adventure Theater as well as Perry Mason, TZ, Rawhide, etc. and Suspense, Johnny Dollar on Radio...

(Even the original 1963-67 David Jansen "Fugitive" TV series, which neither was produced by CBS-TV Productions nor aired on the CBS-TV Network - it was produced by United Artists and Quinn Martin, and aired over ABC-TV... also used "traditional" CBS Music Score for the BULK of its music in the stories)

Anyhow...

Radio Adventure Theater was first called General Mills Radio Adventure Theater for the first six months, Feb thru July 1977. The sole network sponsor was General Mills cereals, and done in "cartoon" style... Trix, Lucky Charms (NOT Lucky Strikes! :), Kix, Cheerios, Cocoa Puffs, the "monster" cereals Count Chockula and Franken-Berry (and others), etc. The remaining six months (Aug 1977 thru Jan 1978), CBS Radio did "regular" commercials... and the program was simply called the CBS Radio Adventure Theater. The second half of the network run was reruns, in the same order as the first six months original airings.

Tom Bosley (Howard Cunningham of Happy Days) was the host. He opened up as well "The General Mills Radio Adventure Theater...." for the first six months Gen.Mills sponsorship original airing.

The pre-recorded hosting by Bosley continued in the second-six-months repeats, but Himan Brown recorded the opening for the (non-Gen-Mills) second-six-months reruns: "the CBS Radio Adventure Theater presents..."

CBS Radio Mystery Theater had several feeds a night, from :07-:59. However, there was a PRE-feed for stations to tape to play earlier if they so desired, from 1:07-1:59pm (Eastern) M-F, and from 3:07-3:59pm (Eastern) on Sat/Sun.

(Gen.Mills) CBS Radio Adventure Theater... the "desired" time that the network wanted, and fed the program on Sat and Sun was 6:08-6:58pm Eastern. But the Sat ed had a Thursday morning pre-feed, and the Sun ed had a Friday morning pre-feed, 11:08-11:58am (Eastern).

In 1979, there was yet ANOTHER drama on CBS Radio, M-F, called "Sears Radio Theater". It was an INDEPENDENTLY produced radio drama, with ORIGINAL music score by Nelson Riddle. CBS Radio aired the drama, but did NOT own/produce it. Sears and Robuck was the SOLE sponsor.

Each nite of the week (M-F) was a different theme and host: Lorne Greene for Westerns (Monday), Eve Arden or Lucy for Commedy (Tuesday), etc. One nite was "Mystery", one night was "Adventure", another night "romance". I forget the hosts and nites, and they did

change some... Vincent Price was one of the "theme night" hosts. Howard Duff and Ida Lupino hosted another night/theme.

There were several weeknite feeds of "Sears Radio Theater", from :08-:58, alternating with hours where Mystery Theater was fed. And there was a weekday morning pre-feed, from either 10:08-10:58am or 11:08-11:58am (Eastern). I'll have to dig out my old CBS Radio network feed schedules to see exactly which time the pre-feed was.

A year later, in early 1980, CBS Radio *CANCELLED* Sears Radio Theater. Being an indepdendently produced radio drama (CBS only aired it and was NOT involved in production/ownership), the Mutual Network picked it up. Mutual hadn't yet gone fully satellite, and was still feeding much of the country on Bell System landlines, mostly 3.5 Khz bandwidth except for the LARGEST markets getting 'cleaner' 5.0 Khz bandwidth Telco feed.

Also, Mutual had TWO five-min newscasts an hour, one at :00 and also at :30, the "Progressive" newscast at :55... several sports/features at either :05/:35 or :15/:45, and there was also the Sheridan/Mutual Black Network which fed its news down the Mutual Broadcasting System telco landlines, from :50-:54:50.

Mutual syndicated the radio drama on tape reels or 12" vinyl. Sears was still the sole (or maybe just primary but not "sole" anymore) network sponsor, but the title was called "Mutual Radio Theater" instead of Sears Radio Theater.

Throughout 1980, Sears sponsorship was less-and-less, until the sponsorship was just "any participating national sponsor" on the network commercial position spots/slots. The drama was gone by 1981 or 1982. I don't remember the exact year that it ceased production and (syndicated) reel/disk distribution by Mutual.

BTW, since Mutual "syndicated" Sears/Mutual Radio Theater on disk or reel, you had no need for "bee-doops".

But when CBS had it as Sears Radio Theater (and also on CBS Radio Mystery Theater and CBS/Gen.Mills Radio Adventure Theater), since they were FED DOWN the CBS Radio Network telco lines, and there were local spot avails, you *DID* hear the NetALERT "bleeps" or "squeaks". And, if a news bulletin needed to be aired, you'd hear the "chirps/bleeps/squeaks" during Mystery Theater or Adventure Theater, or the CBS 1979 Sears Radio Theater, and the 1968-83 jingle with announcer voice alerting that there is a "CBS Radio NetALERT News bulletin".

Jeff Miller has a PERFECT example of this at his Broadcasting Sounds website at Geocities:

http://www.geocities.com/jeff560khz

Look for the CBS Radio news bulletin on the 1977 NYCity power blackout. You hear some dialog of Mystery Theater's feed, with FIVE (pre-1978 version) NetALERT "chirps", then dead air, then the sounder/bulletin for 5-minutes. (mostly David Jackson and Doug Poling of CBS News). Then the close out with the sounder, a single "chirp" and the rejoin to Mystery Theater already in progress.

Not neccesarily. But, if we can have a generator at our house, you'd certainly have to feel that Clear Channel either can not afford one or simply doesn't care about the communities it's supposed to be serving... I wonder which it is? (This could also open them up to potential license challenges at renewal time, as well...)

I wasn't aware the Nightcap Show was on Mutual. It originated from KSL-1160 Salt Lake City and for a time, was carried on WHAS-840 Louisville. Jepko claimed that with those two stations he covered the whole US. Maybe in those days . . . but not today!

When 1430-AM returned to the air about 4 years ago after being off the air for about 5 years; It became News channel 5 radio. This station simocasts the local news casts from our CBS affiliate, WTVF channel 5. It also broadcasts programing from channel 5's cable channel known as news channel 5 plus. The call sign for this radio station (used only in its legal ID at the top of the hour) was WMAK.

Yesterday, 96.3-FM (known as Oldies 96.3) has taken the WMAK call sign. It is now known as Oldies 96.3-WMAK. They are promoting this to those who remember 1300-AM WMAK Nashville's main top 40 station in the 60's and 70's. They also have Ciotte McCloud in the morning. He was also an air personality at WMAK before leaving Nashville in the mid 70's. He returned to KX 104 in 79 and has done a morning show for most of the last 20 years first on KX 104, before going to Y-107 in the mid 80's. The listeners seem to like the new call sign for oldies 96.3.

Since 96.3-FM has taken over the WMAK call sign, 1430-AM (News channel 5 radio) has brought back the WKDA call sign. It uses WKDA in its legal ID at the top of the hour.

I don't have the exact regulation here in front of me but, it's paraphrased as being "as close to the top of the hour as possible during a natural break in programming"...
In other words, the idea is to keep from breaking in over, say, a potential third strike with the bases loaded during a baseball game. But, where I'm from, a network and/or locally originated remote broadcast has the "common courtesy" to take a break for a legal I.D. as close to the top of the hour as possible. (This is the DXer in me speaking, now.) It surely makes logging those far away stations a great deal easier when you KNOW the I.D. will be given within TWO minutes of the hour. I've actually tuned in at the :50 break (just AFTER an I.D. was given) and tried to identify a station that was skipping in only to have it fade before the next I.D. at least an hour later!

Paul,
Besides WRVO check out xminusone.com where you can download RMT also BOB COOKS Mystery Theatre, KENS MYSTERY THEATRE page , JASON CARRS Team Mousetrap site at cbsrmt.com.
If you go to search and enter CBS RADIO MYSTERY Theatre you will also find Slappys Place by Mark Yafchack and videoking@peoplepc.com.
EG MARSHALL was host from 1974-1982.
Tammy Grimes did it in 1982
Himan Brown did when it it was brought back in 1998. Until next time Plesant Dreams.

For the most part, no. The trend in satellite delivery is toward
addressable digital systems. In order to receive the signal the
provider must "permission" the receiver to open the channel.

Rich

I didn't say he WAS the host. I did say there is no mistaking him in the intros on the reruns on NPR in stations in the Cincinnati area. Mr. Cuccia just confirmed this in a post on this board. Quoting him:

E.G. Marshall *WAS* the host/narrator of Mystery Theater during its original Network run, 1974-82. But I've heard Himan Brown's voice at least "open up" Mystery Theater (The CBS Radio Mystery Theater presents...) on many syndicated reruns or current CBS/Westwood satellite reruns in more recent years (1989-to-current).*

john cline ii who knows the voice of Hyman Brown when he hears it, but may not know how to spell his name correctly! :)

KJHK-FM, the Public Radio station at the University of Kansas in Lawrence, KS used to promote the fact that they were the first RADIO STATION to stream audio on the Internet. I don't know when it started, but I know it was and and running in late 1995 or early 1996.

Their web site at http://kjhk.ukans.edu/ doesn't mention it anymore, but I'm sure you can email someone connected with the station for some sort of confirmation.

>Pritchard

You see NOW that you say "reel to reel format" this looks like a dead givaway
that this stuff is PIRATED MATERIAL. Ebay has strict guidelines against illegal
auctions like those ;-)

Heck, if I were allowed to palm off PIRATED MATERIAL on Ebay, I'd become a
$$$Millionaire$$$ overnight just because I'm the Only One on Earth WITH
ABC-TV's California Jam Concert, the Long Lost & Forgotten just like Atlantis
Mother of ALL Concerts.

A word to the wise is sufficient, Sir!

Scott ;-)

I don't know what audio copies exist, but I know where some actual scripts of the show exist. Here. I have some. A frequent actor on the show was my Connecticut neighbor, Alexander Scorby. His wife, actress Lori March, used them and other scripts for scratch paper.

I saw some of them at their house one day and brought home a stack of copy...CBS Mystery Theater, As The World Turns, Gallo Wine commercials, industrial scripts, etc. Alex's penciled edits, markings, and notations on the copy are interesting.

Unfortunately Alex died some years ago...in Boston, there to record a show for WGBH.

Westwood One re-released Mystery Theatre in 1999 and we aired it here on 580 Memories CKWW in Windsor/Detroit.

Sadly, after about 6 months they announced they were ending syndication because of low station signup. Our regular listeners were truly bummed. We added When Radio Was from Radio Spirits in its stead. Still, WW1 has a goldmine in their vaults and will hopefully figure out what to do with all those shows.

63. DFW spanish radio status

Newsgroup: rec.radio.broadcasting
Date: 2001-01-04 16:27:25 UTC
From: arnoldevns@aol.com
Message-ID: <t5993ddg1n35e1@corp.supernews.com>
Source record: 16424

The much talked-about change of 94.1KLNO to spanish AC has been a success. KLNO is drawing a 3 share in the latest ratings and looks like it is making a slow, but steady, climb up the charts. However, the total share of spanish language radio in the DFW market remains a very tiny 6.3 share. It's still hard to imagine how 10-12 stations can live off a 6.3 share when one of the stations is drawing almost half that audience.

Of course it's operational here in the old Commonwealth. In Canada, no less.

Our four CHUM Group Radio stations in Windsor,Ontario (and beaming into Detroit Michigan) have been DAB for about a year. 580 Memories CKWW (Nostalgia/Big Band), 800 CKLW (News/Talk), Lite Rock 939 (AC) and 89X (Alternative) are giving the U.S. a taste of what radio can sound like. Sadly, the tuners are still few and far between.

There is DAB in Toronto, Montreal and Vancouver as well.

I'm just wondering if there's likely to be any kind of audio support using the new 3G (GPRS) mobile 'phones, due to be rolled out fairly soon.

What would it take to persuade Nokia, Ericsson et al to put codecs for MP3 in their 3G products? I imagine that with projected data rates of 256 - 512 KBps, it could be the future of broadcasting. You only need 128KBps to get crystal clear stereo audio.

Any thoughts? I'd be interested to know what people think...

180 miles isn't that far. I grew up in Brownsville, Texas listening to top 40 from KTSA in San Antonio (200 miles) and KILT Houston (250 miles) and both were 5,000 watt AMs at the low end of the dial. They had tremendous daytime signals.

One time as an experiment I mounted a regular car radio antenna on top of my grandmother's one-story house. I was able to tune in WBAP in Fort Worth and WWL in New Orleans-- both 50,000 watt stations about 500 miles away-- during the daytime.

Okay, so what is the guideline for that? Are stations required to identify only once an hour, or do they have to identify at the top and bottom of each hour?

And when ID'ing, aren't they required to give the callsign and the call letters with the frequency?

Paul.

I've picked up WCBS (albeit faintly) in Boston during the day. Reception in Boston was a lot better before the long-dormant construction permit for 890 in Dedham was built in the mid-1990s. Currently I live in York, PA, about 200 miles from NYC by road (maybe 150 miles as the crow flies) and can pick it up during the day -- if I really want to listen to it.

The reason you get such clear reception of WCBS is because the direct path from City Island in the Bronx, where WCBS' transmitter is, to Providence is mostly over salt water. You can pick up any of the major New York stations (save WINS) on Cape Cod for that same reason.

-Sean

The real problem is that the population centers of today, not to
mention the commuting patterns and even the audience itself, are
nothing like what they were in the 1940s. Interstate 70 wasn't much
of a commuter route as little as ten years ago. That's not true any
more.

I don't think my view of WTOP's coverage is "distorted." I've merely
mentioned places where they don't cover very well. Yes, skywave
coverage at night is decent. I have very few problems hearing them in
downtown Philadelphia.

However, Richmond, Virgina is not nearly as easy. (another null?)
I usually resort to listening to stations out of New York or to WMAL
while driving at night. WTOP FM helps, but it doesn't go the
distance.

>If you wade through the night patterns of the stations along the eastern

>midwest and beyond. WTOP (having gone high power about 1930) is NOT
>among the "very oldest". 630 and 980 are.

Agreed. The old WRC 980 station was what I had in mind (I'm not a
regular listener, so I really don't know what it's call sign is
today).

I've covered this subject ad nauseam before. Although I know many
will disagree with me when I say this, I think there are too many MW
AM broadcast stations on at night. I realize it's kind of pointless
to argue this because the licenses have been granted and nobody is
going to volunteer to stop broadcasting.

So instead, we're left with a situation where broadcasters buy up
smaller stations to cover areas they have to null for interference
purposes and you end up with the same program material on multiple
channels interfering with other cities with other stations that also
carry multiple rebroadcasts of the same material, or worse yet,
syndicated programs which are heard on other stations in both markets.

Have we managed to improve on local content? Do we really have more listeners on MW AM than before? Is there more content available than before? I doubt it. I seems to me that we're playing a zero sum game here --with entropy.

Thanks, Mark, for that great treatise on the Theatre! It was very interesting! I printed it so I can read it at home, but I did glance through it.

I remember the Mystery Theatre from the 70's, as that was when I grew up (graduated HS in '82). I lived in Colorado Springs then, and listened to it nightly on KVOR-1300, and the Adventure Theatre ran on the weekends after the Mystery Theatre.

I thought the Theatre was ALWAYS more interesting than the TV any day, as one had to use one's imagination to make the pictures and etc. It reminds me of a quote I heard once (don't remember who said it), but it was in response to a question this person was asked about whether he preferred radio or television: "I like radio; the pictures are better."

After I moved to Denver in '89, I discovered that KOA-850 was running reruns of the Mystery Theatre, which allowed me to tape several of the episodes. I moved to Houston in '97, and that was the last I heard of the Radio Mystery Theatre.

I collect a lot of old radio broadcasts from places such as Radio Spirits and etc. I have some shows from the Mercury Theatre on the Air, a few episodes of "Escape!", several Sherlock Holmes radio mysteries, and others. But the Radio Mystery Theatre holds a special place for me because it was being produced when I was listening.

Paul.

75. DAT/SEDAT Satellite for Network Radio

Newsgroup: rec.radio.broadcasting
Date: 2001-01-04 22:23:55 UTC
From: "Mark J. Cuccia" <mcuccia@tulane.edu>
Message-ID: <t59tvr5lr2657b@corp.supernews.com>
Source record: 16436

Disney-CapCities-ABC/ESPN Radio does use "SEDAT",
and it is much more digitally-compressing than the
earlier "DAT" which is used by
CBS/Westwood-Infinity/Unistar/NBCRadio/(Mutual)/
CNNRadio/FoxRadio/etc.

It *CAN* be received (theoretically) by a private
individual at home, but it is EXPENSIVE, and involves
a lot of investigating and shopping around for "industry/
technical" equipment that the regular/average private
person wouldn't even *KNOW* where to begin to look.

As for ABC Radio's Dallas-originated "StarDust"
nostalgic/Sinatra/etc music service, I remember
one time talking on the phone with Eddie Hubbard
and he told me that there was a lady in Georgia
who was upset that the local station that carried
ABC Radio's StarDust nostalgic music service actually
was able to purchase the dish and associated receiving
equipment.

At the time, "Stardust" and the other 24/7 music services
of the Satellite Music/News Networks had just been purchased
by CapCities-ABC. It is possible that SMN (including Stardust)
was still using analog on Western Union's Westar (or some other
telecom common-carriers') satellites.

But maybe ABC had already begun to put the SMN networks'
24/7 services on the RCA/GE Satcom Digital?

Offhand, I don't remember what Eddie Hubbard told me "exactly",
but this elderly lady in Georgia apparantly *HAD MONEY* and *WAS*
able to purchase the associated equipment and dish, and was
listening to "Stardust" at home directly via Satellite, without
having to have a local affiliate! :-)

BTW, with DAT and SEDAT, it is *HIGHLY RECOMMENDED*
that you have a rather LARGE dish, and FIXED, due to the
fact that an *ENTIRE TRANSPONDER* is used for this digial
compressed/multiplexed stream of dozens or hundreds of network
radio audio feeds, as well as TTY/Data of program schedules,
as well as possible auto-cue-tones on their own dedicated
satellite sub-channels.

(Yeah... home receiving network radio satellite equipment!
To be able to hear Joe Lacina, Eddie Hubbard, Patti Pratt, etc. from

ABC-Dallas Stardust, to hear Paul Harvey, to hear CBS-NBC-Mutual-WWOne,
etc! DIRECTLY and UN-adulterated! But only if one has 10K+ $'s)

|180 miles isn't that far. I grew up in Brownsville, Texas listening to top 40
|from KTSA in San Antonio (200 miles) and KILT Houston (250 miles) and both were
|5,000 watt AMs at the low end of the dial. They had tremendous daytime
|signals.

In the Northeast, it actually *is*, because the ground conductivity there is so poor. The Gulf Coast has above-average ground conductivity.

Moreover, KILT is one of several Houston AMs whose daytime DAs produce patterns that "hug the coast", so to speak. I have a map that KTRH produced in the early 1980s showing the respective coverages of KILT, KTRH, KULF (790), KXYZ, and others, and what was striking was the similarities among most of them. KTRH had (and, I presume, still has) a bit of a daytime "bump" up into Deep East Texas, but otherwise there's lots of signal shooting over the coast.

When I was at KTRH, we would get letters from missionaries and diplomatic personnel stationed in central America who appreciated our 10 pm news block -- because KTRH was the strongest U.S. station they could receive on AM.

I agree that there are probably 3 times the number of AM stations that can reasonably fit in the band. This could have been fixed if the rules had been rewritten to encourage marginal stations to be bought and turned off. It has happened in a few cases. But economics generally encourages buying and keeping the marginal stations.

If there are N stations in a market and one is turned off, the advert income of all the others (including competitors) might increase by a factor of very roughly 1/(N*(N-1)) . And there would be less interference.

If there are N stations in a market and one is bought and kept on, the income of buying organization might be increased by 1/N, but the income of the competitors WON'T INCREASE.

Which approach would you expect a business to favor?

A legal ID consists of call letters followed up immediately by city of license. Back in the 80's (I think), the FCC amended this to allow a station to also name any secondary markets which they may (or, actually may not) serve. This gave us the ID's that sound like "(Mutter the call letters)WXYZ, (speak fast, low, and as unintellligible as possible) podunk, (really punch this next city) NEW YORK CITY!"
Even more recently, the rules was modified to allow the insertion of the name of the licensee and/or the frequency: "(Mutter the calls letters) WXYZ, (really punch the frequency and name of the licensee) CORPORATE RADIO COMMUNICATIONS CORPORATION, (mutter the city of license), podunk, (now, really punch the secondary market in which we are a wannabe market leader) NEW YORK CITY!"
The ID is SUPPOSED to be given, at least, hourly "as close to the top of the hour as possible at a natural break in programming". When this break actually occurs depends upon the programming (obviously). Some are more lax than others.
I'll never forget a "legal" ID that a station near my home town (who actually was a medium market "wannabee") came up with back in the 80's. The station was (and still is) a full class C (100,000 watts at 1,850 feet HAAT) and had JUST attained such great antenna height. It had gone from 29,000 watts at 150 feet to this "Monster FM" (no pun intended) signal. It was (and still is) licensed to the small town of Atmore, Alabama (population, 15,000 if you really PUSH it). There "legal" ID became: "WIZD, atMOOOOORE MUSIC FOR MOBILE, PENSACOLA!" This was also "burried in the :50 stopset, as has become the custom.
In all honesty, as stations become more and more ashamed to mention their actual city of license, I'm surprised that there are not more challengers who would actually SERVICE their city of license at renewal time!
I also think this may soon change. Several rather large churches (which were "bumped" out of LPFM frequencies by the recent NAB/NPR fiasco with congress) who have MORE than enough money have already

expressed interests in some fairly large license challenges. Their reasoning is that, if the corporate stations are actually doing what they're supposed to be doing "to the letter", at least, they'll rack up some big legal fees in the process and there will be no profitting from "cut-throat radio" operating methods and that they'll be forced to operate as a SERVICE to their city of license...

[Moderator's Note: Dayton, Ohio's Z93 still, in my mind, holds the title for Most Creative Legal ID. Licensed to Eaton, a tiny town 10 miles west of Dayton, they used to use the positioner, "Z93 is WGTZ... Eatin' Dayton & Springfield Alive!" They still may; I haven't listened to them lately.]

From 'CKWW Radio':

>Our four CHUM Group Radio stations in Windsor,Ontario (and beaming into
>Detroit Michigan) have been DAB for about a year. 580 Memories CKWW
>(Nostalgia/Big Band), 800 CKLW (News/Talk), Lite Rock 939 (AC) and 89X
>(Alternative) are giving the U.S. a taste of what radio can sound like.

Unfortunately, when CIDR (or whatever its calls are now) switched to Lite Rock from AAA, they stopped playing a lot of the music that no one else plays, stuff that made them unique. I can get the station quite clearly here in Cleveland due to some pretty funky patterns over Lake Erie, but I no longer have a car-radio preset for it.

Please forward this expression of extreme dismay to the people who program your sister stations.

I do still occasionally listen to 89X when in Detroit.

Many of the NYC station bang into the RI quite well. Consider the propagational assistance of the Long Island Sound and the signals race up toward your direction. BTW, sometimes, if you listen carefully, during the winter you can also hear WRFD underneath in the early mornings on 880. I've been able to pick them up while camping in New Hampshire. If you are interested in broadcast band DXing, you should check out:

The 'callsign' and 'call letters' are one in the same.

The rule says they must ID with the call letters followed immediately with the city-of-license. IDs must be broadcast at the beginning and end of each broadcast and at the top of each hour. Like another post said, this may be delayed until a 'natural break' in programming.

This is not unusual at all. You should be able to hear all of the NYC 50 kWers day and night. It's almost a straight shot from NYC to Providence over water, and this time of year the cold temperatures are very favorable to AM signals.

Did you know there are organized clubs whose members listen for distant signals (called DX) on the AM band?? Yes, a strange bunch, indeed :-)

Visit www.nrcdxas.org if you'd like more information.

If I remember correctly, the legal ID rule is 5 minute either side of the top of the hour or at the first break in programming when running a network show. The Indy 500 used to take theirs at the bottom of the hour, very weird. And as for the Stern station running 6 commercials first there are 2 possible answers. The ads may have been network spots, so the first break came after the commercials or....and this is more likely: like most stations, they really don't know the rules anymore and don't care to follow them anyway and just ran the ID after they made their money...(the commercials)...most stations have been fudging the ID back to :50 for years and very few get into trouble and most of the big stations couldn't care less about some little fine they are risking from the FCC. After all, most stations are now owned by a very few, LARGE, corps that have tons of money. I have heard that some are encouraging some of their jocks to try and get fined for the free publicity...it makes the local jock look real cool to teens if he gets fined for saying fuck on the air. The radio world is changing..... too bad

Actually with my GE Super Radio and one of my Boom Boxes I can also receive WINS quite clear in Providence during the day as well. I beleive their transmitter is in Lyndhurst New Jersey about 195 miles from my house. This would be the most distant station that I can receive during daylight hours from my home. Sometimes the signal is so good it really does amaze me that the tower is so far away. As someone else mentioned, that kind of distance in the Northeast part of the United States really is very good!

Even more so in the Midwest, where the soil conductivity is the highest in the world. When I lived in Hays, Kansas (between Denver and Kansas City on I-70), I could easilly hear these 5KW stations in the daytime on any standard table radio:

540 KWMT/Fort Dodge, IA
570 WNAX/Yankton, SD
580 WIBW/Topeka
590 WOW/Omaha
610 KDAF/Kansas City
630 KHOW/Denver
640 WOI Ames/IA (with the Norman, OK station underneath)

...plus many more.

WNAX was the strongest of all. I carried this station on the car radio all the way into Oklahoma! Would have reached even further, but the 570 in Dallas began to take over as I got closer to Oklahoma City. On the other side of their antenna, I have listened to WNAX up in Manitoba, Canada! 5KW on 570 carries almost forever in the land of 30+ soil conductivity.

R J Carpenter rcarpen@erols.com commented ...

>>
I agree that there are probably 3 times the number of AM stations that can reasonably fit in the band. This could have been fixed if the rules had been rewritten to encourage marginal stations to be bought and turned off. It has happened in a few cases. But economics generally encourages buying and keeping the marginal stations.
>>

Based upon a comprehensive analysis, there is room for five Class I stations on each clear channel, these Class I stations being a mixture of U.S. Class I-A, Class I-B and Class I-N stations and foreign Class I-A and Class I-B stations, with these stations being ND and DA-N, as appropriate and as feasible, all being 50 kW full-time.

Yet, many clear channels have only one Class I station, most have only two Class I stations, and a few have three Class I stations (some with one such Class I station being "grandfathered" at only 10 kW).

In this perspective, the clear channels are being grossly misused.

Particularly as secondary service is of no particular economic value any more, except for use in coverage map "pissing contests", such as those misguided stations which feel the need to claim coverage of "38 states and Canadian provinces and territories".

My $0.02 worth, but perhaps worth a little bit more.

Has WINS changed it's DA? I have a coverage map from the mid-60s from
them, and it shows the bulk of their signal going NE (over Long
Island) which should continue on to Cape Cod just fine.

It seems to me that stations travel further out west than they do in TN where I live. I remember in 1976 when our family took a trip out west to see our relatives in Albuquerque NM and visit the sites. I always took a radio in the car with me to pass the time. I remember starting with WKY in Oklahoma City, which was a top 40 station at the time picking that station up until we got to the Texas border. KRKE in Albuquerque could be picked up even in AZ during the day time. There seemed to be several stations like that.

Here in TN, the best I can do is picking up WHAS in Louisville KY in the day time and it isn't nor never was as clear as the stations were when we took our trip out west.

The chief winter effect is reduced sunlight and hence reduced absorption.
There's no ducting that I know of at MW frequencies.

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION (Continued)

PART 73--RADIO BROADCAST SERVICES--Table of Contents

Subpart H--Rules Applicable to All Broadcast Stations

Sec. 73.1201 Station identification.

(a) When regularly required. Broadcast station identification announcements shall be made: (1) At the beginning and ending of each time of operation, and (2) hourly, as close to the hour as feasible, at a natural break in program offerings. Television broadcast stations may make these announcements visually or aurally.
(b) Content. (1) Official station identification shall consist of the station's call letters immediately followed by the community or communities specified in its license as the station's location: Provided, That the name of the licensee or the station's frequency or channel number, or both, as stated on the station's license may be inserted between the call letters and station location. No other insertion is permissible.
(2) A station may include in its official station identification the name of any additional community or communities, but the community to which the station is licensed must be named first.

Hope this helps

>>

As with almost ALL coastal Class II-Bs on foreign clear channels (740 is a Canadian clear channel), the maximum radiation is directed into the ocean, with the COL usually being between the Tx site and the coast.

KCBS, which is also on 740, sends less than 5 kW to any point on the Canadian border (a NARBA requirement), but the highest equivalent power is not towards the coast, as with KTRH, but is towards the SSW, with S.F. obviously in between the Tx site and the rest of the southwest. The equivalent power towards S.F. and the rest of the southwest is 275 kW.

The KCBS antenna system efficiency is significantly greater than the Class II minimum, and, in fact, it would have been at least Class I efficiency if CBS could have installed taller than 500 foot towers at their Novato Tx site.

Incredibly, Houston, which is Texas' largest city, has no Class I station at all, and KTRH, which should employ a high-efficiency antenna system, uses a "conforming" but relatively low-efficiency antenna system.

And don't forget that Entravision is buying the 106.7 Muenster move-in,
which likely will mean another Spanish language rimshot with a sub-1.0
share (Entravision's 100 kw rimshot at 101.7 showed up with a 0.4 share
in the last trends).

I'm also confused by this -- I certainly don't see how these sort of
miniscule ratings can support the $20 million and higher price tags that
these stations have been getting.

From: Radioguy <radioguy@snet.net>
Message-ID: <t5cdnbb2n04pbb@corp.supernews.com>
Source record: 16366

John R. Gambling, who left the WOR morning show last fall after three generations of his family had a 75-year run in that slot, will return to the radio next weekend -- on WABC (770 AM).

WABC program director Phil Boyce said yesterday Gambling will do a live Saturday show, 6-10 a.m., starting Jan. 13, and spot features for the Curtis Sliwa-Ron Kuby morning show.

"It's not often you get a chance to bring in someone of John's stature and reputation," said Boyce. "He'll be doing the show everyone knows him for -- commenting on the news, interviews, heavy on personalities."

Gambling's WOR show was ranked in the city's top 10, but WOR told him in September it was not renewing his contract, citing a desire to attract younger listeners.

The reg says something like the legal ID needs to be as close to the top of the hour as possible, in a normal break in the programming. Legal IDs are something that most stations are very good about, in my opinion. With the automation and live assist systems that we have now, I would venture to guess that stations are even more compliant now than when a jock would have to keep an eye on the clock.

Howard Stern is a radio veteran, and as such should have known better in this case. I don't think it's any big deal though, as long as it doesn't become a habit. It's probably not on the FCC's priority enforcement list. When I did the news at KTIB-AM 640 in Thibodaux, LA, our station manager was an "old timer" (with all due respect) and he would have fits if you got the legal ID in at, say, 0:04. He would lecture us as though the enforcement guys were waiting on the next block to bust us.

Our station would power down automatically from 5KW to 1KW at sundown. There was a short period when our remote timer was out of order and we had to phone the transmitter from the control room to power down "manually". The GM would listen to the station on his drive home, and naturally he could tell in his car when that would happen, as he lived about 18 miles or so away. One evening a co-worker was on duty and he remembered to power down about 10 minutes late. The GM got on his cell phone and gave the poor guy such an ear beating that he was convinced the oversight would cost him his job and the station its license. Does anyone else have experience working with a boss like that (old school)? Of course we need to follow the rules, but this guy used to have a stroke over the smallest infraction.

About 6 months after the power incident, the GM, who had majority interest in the station, and his partener sold out to Delta Starr Broadcasting (another corporate takeover, sigh). I guess the stress was getting to him... Thanks for letting me share.

>provinces and territories".

Assuming that those Class I stations were the only stations on the channel
at night, that might be true. A quick check here shows at least six night
services on *every* "clear" channel. Not counting Mexico and Cuba.

IMHO the situation is significantly worse on the "regional" channels. Here
in the South, few of these channels are usable at distances of more than 50
miles at night.

I think there's definitely *something* wrong when I have all of *two* usable
night services - one subject to intermittent interference. And I'm not in
the middle of some desert; I'm 25 miles from the center of a top-30 market.

Not surprised at all that you can hear WCBS in Providence. I used to live in the Catskill mountains (about 100 miles NW of New York) and we routinely listened to WCBS day and night.

Here in the Daytona Beach area, we can hear Savannah, Georgia (630), Charleston, SC (1250), Hilton Head, SC (730), and several others, all between 100-200 miles away, because of the clear path along the coast.

At the time, there were only a few local stations serving Cape Cod;
IIRC WOCB 1240 and WPLM 1390 would have been the most significant.
The Boston stations were and are all engineered to serve Boston; even
WBZ nulls Cape Cod [1] -- although not as strongly as the other Boston
stations (of which the major ones have ``bowtie'' or ``figure eight''
directional patterns [2]).

Today, the Cape and Islands have twenty FM stations and two AMs; both
of the AMs are relays of non-commercial Boston FMs (WBUR on 1240 and
WUMB on 1170). Add the two Plymouth stations (WPLM-A/F), and you've
got one station for about every ten thousand inhabitants.

-GAWollman

[1] WBZ uses a simple two-tower cardioid from its transmitter in Hull
(at 45 Newport Ave. for those interested in visiting -- not that
you'll have any trouble finding it anyway). The pattern was designed
to increase radiation over downtown Boston, with a corresponding
decrease over the ocean. The Cape and Islands are 50-plus miles to
the southeast of Hull, and so receive more than the pattern minimum,
but much less than is directed over the rest of Eastern Massachusetts.

[2] 590, 680, 850, and 1260 are like this. 1510 as it was in the 1960s
had a 5 kW teardrop pointed due north from Quincy. 1330 and 1600 are
cardioids pointed northeast. 1150 is the only Boston AM I can identify
whose pattern actually favors the southeast. 790 from Providence
should have gotten in pretty well as well.

>>

Not necessarily.

You could still accommodate serveral Class Bs which would be dropped-in between two DA-N Class As which were providing mutual night protection.

1130 is probably the best example, with the three drop-ins being 50kW/25 kW (six/nine towers), 50 kW/10 kW (six/nine towers) and 50 kW/10 kW (two/six towers).

1170 and 1520 are perhaps good examples.

1500 is an example of a very difficult drop-in, but one which had a favorable outcome (nine/twelve towers reduced to nine/nine towers).

"Even more so in the Midwest, where the soil conductivity is the highest in the world."

It certainly seems that way in parts of Indiana. At my Aunt Miriam's place in Columbia City (about 20 miles west of Fort Wayne), both CKLW Windsor and WHAS Louisville come in reasonably well day and night; the Chicago 50 kWs are very strong there, almost as strong as locals, and my late Uncle Bud used to listen to WLS' farm market reports regularly. (WLS also comes in well in Kokomo; I remember hearing them at a concession stand in a city park there in the mid-70s.)

For that matter, I once picked up WMAQ in Louisville *at midday*, also in the mid-1970s -- just barely there -- on an RCA Victor Globe Trotter tube portable (with an RF stage and rotatable ferrite loop, almost an ancestor to the GE Superadios). Maybe I'll try it again this weekend, with a Sony ICF-2010 (the Globe Trotter needs new filter capacitors).

I am curious about this as well. In Morris County, NJ, WINS is at present very weak, even in the eastern part of the county. I thought that the decision to purchase and take dark the 1000 khz signal in Hackettstown, NJ was a prelude to strengthening WINS' presence in northwestern New Jersey.

The reg says something like the legal ID needs to be as close to the top of the hour as possible, in a normal break in the programming. Legal IDs are something that most stations are very good about, in my opinion. With the automation and live assist systems that we have now, I would venture to guess that stations are even more compliant now than when a jock would have to keep an eye on the clock.

Howard Stern is a radio veteran, and as such should have known better in this case. I don't think it's any big deal though, as long as it doesn't become a habit. It's probably not on the FCC's priority enforcement list. When I did the news at KTIB-AM 640 in Thibodaux, LA, our station manager was an "old timer" (with all due respect) and he would have fits if you got the legal ID in at, say, 0:04. He would lecture us as though the enforcement guys were waiting on the next block to bust us.

Our station would power down automatically from 5KW to 1KW at sundown. There was a short period when our remote timer was out of order and we had to phone the transmitter from the control room to power down "manually". The GM would listen to the station on his drive home, and naturally he could tell in his car when that would happen, as he lived about 18 miles or so away. One evening a co-worker was on duty and he remembered to power down about 10 minutes late. The GM got on his cell phone and gave the poor guy such an ear beating that he was convinced the oversight would cost him his job and the station its license. Does anyone else have experience working with a boss like that (old school)? Of course we need to follow the rules, but this guy used to have a stroke over the smallest infraction.

About 6 months after the power incident, the GM, who had majority interest in the station, and his partener sold out to Delta Starr Broadcasting (another corporate takeover, sigh). I guess the stress was getting to him... Thanks for letting me share.

Has WINS changed it's DA?
>>

Several times.

WINS's old DA was constantly in violation of its operating parameters, due to reradiation from adjacent structures.

The present DA design was probably implemented incidentally to Westinghouse purchasing and taking dark the 1010 in Little Rock, AR.

Assuming that those Class I stations were the only stations on the channel
at night, that might be true. A quick check here shows at least six night
services on *every* "clear" channel. Not counting Mexico and Cuba.

IMHO the situation is significantly worse on the "regional" channels. Here
in the South, few of these channels are usable at distances of more than 50
miles at night.

I think there's definitely *something* wrong when I have all of *two* usable
night services - one subject to intermittent interference. And I'm not in
the middle of some desert; I'm 25 miles from the center of a top-30 market.

127. John Gambling to Return

Newsgroup: rec.radio.broadcasting
Date: 2001-01-06 15:22:59 UTC
From: Radioguy <radioguy@snet.net>
Message-ID: <t5ee2j9q34o885@corp.supernews.com>
Source record: 16386

John R. Gambling, who left the WOR morning show last fall after three generations of his family had a 75-year run in that slot, will return to the radio next weekend -- on WABC (770 AM).

WABC program director Phil Boyce said yesterday Gambling will do a live Saturday show, 6-10 a.m., starting Jan. 13, and spot features for the Curtis Sliwa-Ron Kuby morning show.

"It's not often you get a chance to bring in someone of John's stature and reputation," said Boyce. "He'll be doing the show everyone knows him for -- commenting on the news, interviews, heavy on personalities."

Gambling's WOR show was ranked in the city's top 10, but WOR told him in September it was not renewing his contract, citing a desire to attract younger listeners.

Not surprised at all that you can hear WCBS in Providence. I used to live in the Catskill mountains (about 100 miles NW of New York) and we routinely listened to WCBS day and night.

Here in the Daytona Beach area, we can hear Savannah, Georgia (630), Charleston, SC (1250), Hilton Head, SC (730), and several others, all between 100-200 miles away, because of the clear path along the coast.

>they can get away with this?<

"Can they get away with this?" is a different question than "is it legal?"

I have seen in the FCC Enforcement Bureau public notices that they are starting to go after station ID violators, although given the apparent scope of the problem, I suspect it's still not a top priority for them.

If you have enough money most anything is possible. However you would need (very soon) a Starguide III unit and a decent size dish, I forget what bird ours is pointed at now but you would need permission from ABC to decode the signal.

When SMN as a non ABC entity started in the early 80's there original
signals were uplinked to the bird as a subcarrier of WGN-TV in Chicago
which was and still is a widely popular cable channel. Of course back then
the audio was analouge and if you had a C-Band dish and the proper decoder,
extracting SMN's audio was relatively easy as you just had to know what

subcarrier to look for.

Of course it was the Mutual Broadcasting System that began the use of satellite distribution of program material. There land-line infrastructure was pretty bad though I give them credit for sticking their necks out and going on the bird. I believe they had a proprietary encoding system.

WCBS (as well as WFAN, WABC, WBBR, and WEVD) blasts in here city-grade in Southern Ocean County, NJ (near Beach Haven). (about 105 miles South)

During the daylight hours I recieve a good signal off WTIC. Good enough to get on a regular radio indoors.

I can even get WBZ, although WBZ is considerably weaker. For WBZ I need my Shortwave radio or car radio.

I thought that the decision to purchase and take dark the 1000 khz signal in Hackettstown, NJ was a prelude to strengthening WINS' presence in northwestern New Jersey.
>>

Perhaps days, but certainly not nights.

WINS is a Class B on a Canadian clear channel, and Canada has two Class As on 1010 ... Calgary is the Class I-A and Toronto is a Class I-B (although it probably should be a Class B).

WINS will have to protect Calgary *and* Toronto nights, unless Toronto is reduced to a Class B, which seems unlikely, in which case WINS will still have to protect Calgary.

Not only that, but the saltwater path is so good that it allows certain distant
stations to cancel out co-channeled locals. For instance, WNBA/1490 in DeLand,
Florida. Barely 20 miles from Daytona Beach...yet, the 1490 in Brunswick,
Georgia (100+ miles distance) totally wipes it out when you're beachside.

158. FS: Nice Royalty-Free Production Music Library, 2 CD set

Newsgroup: rec.radio.broadcasting
Date: 2001-01-07 20:22:50 UTC
From: storypod@aol.com
Message-ID: <t5hk0qgimuaoba@corp.supernews.com>
Source record: 16319

Hi All,
I'm one of the producers of a 2-volume set of Royalty-free production music, the Seagate Production Music Library, Volumes 1 and 2. We (Seagate) have recently signed an exclusive licensing agreement with a distibutor (who is licensing individual tracks to customers at $30 PER TRACK through online download), and they've allowed us to sell off the few cds we have left, with full licensing rights included, at a steep discount. The original price for these cd's is $290 ($145 each), but we can offer the remaining sets for $69 total for both volumes.
It is a full buyout, so you may use any or all of these tracks in your video, multimedia, TV or radio program with no additional royalties or fees due. The Seagate Production Music Library in 2 volumes is a very useful, extensive and complete library. It contains over 2 hours of music, with 145 tracks based on 82 different themes. Categories include 'Warm and Fuzzy', 'Upbeat/Industrial', 'Light/Breezy', 'Orchestral', 'Mystery', 'Rock', 'Impressionistic', and 'Special/Other'. The tracks range from short stingers, many :30's and :60's, to long 2 and 3 minute beds. The writing and production values are very high, it was recorded exclusively at a pro 24-track studio. It's been used by many national clients like General Motors, Panasonic, Columbia-Tristar Television, Arts and Entertainment Network, ABC-TV and many others.
The cd's include all the original packaging including license info and track details. Any buyers will be registered as the original purchaser, with all rights included. . A local studio Zeta Recording has billed over $3000 of music use fees from Seagate, all from their one-time investment of $290. And of course, you'd be paying a LOT less. If you're interested, let me know,
Tim

I can't provide all the information, JC, but the broadcast band is different than HF. As an amateur radio operator, I used to work Buffalo, NY from Rochester, NY on 160 meters in the daytime constantly. This is only 60 miles, but I was only running 65 watts - and the guys in Buffalo had to relay a message to me from another station just wanting me to know I was banging into Washington DC (at about 1:00 PM). The secret is that as you drop below 4 or 5 MHz, true groundwave starts to become reality. The curvature of the earth becomes a defracting 'knife-edge' and the waves tend to bend and follow the earth. Down in the broadcast band, this is a reality. Only a ton of other stations on the air often prevents you from hearing DX. The big stations (clear-channel) often can be heard many hundreds of miles away during the daytime. Of course, during the nighttime, signals will travel thousands of miles (and many stations are daytime only - their absence allows you to hear the DX). On HF, groundwave does not exist and hearing distant stations requires the use of the ionosphere as a reflecting medium. Unfortunately, during the daytime, the D layer absorbs the lower frequency HF signals (3 to perhaps 8 MHz or so) rendering them useless for long-haul communications in the daytime. Groundwave (such as on the broadcast band) does not require the signal to travel through the D layer and thus can be heard for considerable distances.

Have a gooder!

Jim (Rochester, NY)

You got that right, Drew. In the early 70's I worked at a 1kw station on 860 kHz in Cocoa, FL (now dark).
It was Christmastime and the PD had gone home for the holidays and on the day after Christmas, I got a call from him at 12:00 noon and he was listening in MidTown Manhattan-even overcoming WCBS's 50kw signal 2 channels away!
Figure that one out....

165. Mark Scott Disappears WXYT

Newsgroup: rec.radio.broadcasting
Date: 2001-01-08 16:10:54 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <t5jpke2ncnnm6c@corp.supernews.com>
Source record: 16326

Wall-to-wall sports appeared in Mark Scott's 10am slot after Imus
on WXYT 1270 Detroit, as monitored at the border listening post
in Central Ohio.

Scott was trashing management as inept and stupid for quite a
while when WXYT decided to go to all sports from talk, then
quieted down when it looked like they might keep his show
(as apparently they kept did Imus, thankfully, which works with
sports stations pretty well).

When he left for vacation Scott said ``By the way, if anything happens
to me, I have a website to check if I went anywhere else.''

First caller on the first show said: ``Sports Talk Radio Sucks.''
It's a tough crowd. Third caller said: ``Sports Radio Sucks.''
As did the fourth.

Scott's website I think was http://www.markscottshow.com
Maybe something will turn up there.

Scott had a peculiar way of being slow to cut off the caller that
was endearing, and other ways he was insufferable, for those of
us who heard him regularly because of the radio being on after Imus.

It *could* be WBPS (890), a suburban Boston station owned by Mega. I believe they have been naughty with regards to changing patterns over the years (during the day they aim a lot of the signal west, IIRC), so this may be the culprit.

I'm not sure where she is today - I had a chance to meet her on the
Metallica trip to Tuktoyaktuk, NWT in Canada.

She was really nice. I'm not sure why the format didn't work, but there
were already a number of stations doing the alternative thing in 1996 -
most notably Z100 who dabbled with acts like Live and Everclear before
they needed to. Also, I seem to recall that Q104's presentation was not
condusive to the format; with odd music beds and jocks who spoke to
people 25 and younger.

Did I get her name correctly spelled, because if she ever turns up someplace with a webcast I wanna catch her show. She was really good.

>condusive to the format; with odd music beds and jocks who spoke to
>people 25 and younger.

I would've thought getting there first, i.e. establishing yourself in that format first and foremost, would count for more in the ratings, but I suppose not. I seem to recall the station slumping a bit, then getting in a new GM or owner who promptly shut off all that cool music.

Like it matters- WSOU is the only station worth hearing in the NYC area for new music.

Please supply us with the data that shows people are switching to
shortwave. Otherwise, this sounds like nothing more than brokered
shortwave pitch. It's my impression that even shortwave is moving away
from shortwave in favor of satellites and local terrestrial stations.

I'd love to read the audience study that backs up your claim.

I can pick up WBZ, Boston, 1030 daytime in western Queens, NYC.

The last time I was in central Cape Cod, some decades ago, several of
the 50 kw MW NYC stations came in on a car radio.

And Fresno from San Francisco during the daytime on medium wave
doesn't seem to be at all uncommon.

I'd be interested if anyone gets over say 300 miles regularly (no
eclipses or any weird propagation conditions) on 50 kw medium wave
groundwave signals.

When Dallas' WFAA 570 went off for a few days in 1990 when
KLIF 1190 bought the station for its better coverage...WNAX
could be heard in north Texas daytime!

The Chiapas station, to the best of my knowledge, has never been DXed in the US.

More likely is the Laredo station, which is notorious for not dropping to night power. Or, a mentioned previously, the Boston area station.

The most widely reported signal on 980 for many years was Radio Galeon on the coast of Colombia. The Cuban is not running 30 kw, and gets out very badly.

Beware the WRTVH. For more than a decade, it's Latin American listings have been as useless as wheels on a fish. Several country listings I have verified are at least 5-6 years out of date.

Hi,

I would like to know how I can find out where this station
was located. I have a photo that my gradnfather took of front
of this station's studios/office, I beleaved that he worked
at as an engineer and/or an announcer at one time. It was in
a fairly good sized town or city as it was a store front
studio wtih the call letters on the window. But I do not
know and no one in my family can remember where it was located.

My gradfather passed a way quite some time ago as did my gradmother.
And my mother could not remember where it was at.

I would like to find out where it was located tO I can document
in the family photo album.

All it says on the photo is WCBA - WSAN main studio and office.
No mention of the location.

Is there anywhay I can find out the city of license ??

Any help would be appreciated.

Thanks

Chris Maukonen

Kevin Wall, I think his name was, took over 10am-Noon.
The 3pm-6pm slot seems to be the Locker Room you refer to.

They've kept Imus (thank heaven) & Rush only. I don't know their
night schedule because I can't hear them at night, or rather
I hear them and a hundred other stations too on 1270.

Way back in the 60's, when I was in South America, I had the chance to audit the local ratings interview-by-interview. In an area specifically targeted by major short-wave broadcasters, I found not one incidence of SW listening in several whole surveys at a time when the sample size was 30,000 per book in a market on not quite a million. With that in mind, I turned back in a commercial short-wave license I held.

The only action on Short-wave is fading, static, interference and propaganda.

Here is a news item on the CCU Tulsa cluster:

Clear Channel To Relocate Tulsa Stations

It spent $3 million for the 13-acre site and plans to consolidate the six radio stations (KAKC, KIZS, KMOD, KMRX, KQLL & KTBZ) and two TV stations into the new location. Clear Channel expects to spend an additional $7 million in renovations, including a 278-foot broadcast tower and a 40,000 square-foot exhibition center. Clear Channel expects the move-in to start in April, with total occupancy by spring of 2002. Clear Channel currently employs 150 people in Tulsa, but company Director/Engineering Mike DeClue tells the Tulsa World, "Eventually, the new site will employ 245 people, with an added news capability."

WCBS is generally clear nighttime copy here in Detroit all year 'round. In midwinter, both WCBS and WBZ Boston are strong as locals as early as local sundown. I often listen to one or the other in the car on the commute home. Last Thursday evening, Jan 4, I punched up 880 around 6pm ET and instead of WCBS, heard KRVN in Lexington Nebraska, a new entry in the car radio DX log.
On 1010, CFRB and WINS usually are near zero beat, sometimes at equal strength, but depending on propagation CFRB usually wins (sorry) the battle.
On Cape Cod trips, I often listen to the NYC AM's, which have a clear Northeast shot over the ocean.

>>

Central Valley of California. Also along the Calfornia coast.

But a real test is if both 50 kW stations are ND.

In this respect 640 or 1070 in L.A. and 680 in S.F. are good candidates as
these are ND all hours.

740 and 810 in S.F. are not good candidates as these both send several hundred
kW towards the SSE and L.A., while the L.A. stations send only fifty kW towards
the NNW and S.F.

Not being in listening range anymore either (eastern PA is a long way from the middle of Oakland County), here's hoping they put a better local product to the market than does WDFN. WDFN thrives on being the third-grader station, with silly innuendo taking place of the sports talk much of the time.

For a station which was the last market to get an all-sports station, it's weird knowing that Detroit has three all-sports stations now (1130, 1270, 1310), including The X, Fox Sports Radio at 1310. (Clear Channel, which also owns WDFN at 1130, flipped 1310 from an FM simulcast around Nov. 1.) Hopefully CBS, which refined the format at WFAN and has other successful all-sports stations around the country, can use that effective formula at WXYT.

Well, Bob, that _is_ the law. But there's nothing that really prevents shortwave broadcasters in the U.S. from airing programming that they think will build an U.S. audience while at the same time claiming that their service is for, say, Europe, South America, or wherever. This dodge has been used many times over the past twenty years or so. Indeed, their antenna systems are beamed for optimum overseas reception, but that doesn't prevent them from laying down a pretty good signal over a good portion of the U.S. (depending on their location, of course).

Frankly, shortwave is an almost total loser almost everywhere in this age of satellite feeds to local and regionl stations, etc., and even the internet. Subscribe to rec. radio.shortwave sometime. The quality of the newsgroup will give you an idea of the real importance of shortwave (except to hobbyists)

Don.

While that's theoretically true, most of the easily heard US shortwave stations
don't seem to really be aimed at foreign listeners. It's an outdated
requirement probably dating back to when stations wanted their local markets
protected, and one that all too many US SW stations only honor on paper. I'm
still waiting to hear someone explain for example how the programming on WWCR
is aimed at anyone outside the US.

Source record: 16213

WSAN was (in the 1960's and 1970's) based in Allentown,Pennsyvania on 1470 Khz. The transmitters (and the studios I think as well) were actually in Whitehall, just byWhitehall Mall, which is north of route 22. When I was young it was a top 40 station, but around 1968 or so it switched to "progressive" rock then sort of (like most stations of the genre) morphed into Album Oriented Rock, though- like many of the few AM outlets of the genre - generally being a bit less tight in its playlist than FM outlets at this time.

I left the ares in its "progressive" days and as things turned out rarely returned but I tried to follow things as much as possible. In the 1980's he station was big band/adult standards (after WZZO - ex WGPA FM - took most of the rock audience) , but when this format went to ompetitor WKAP I think it switched to country. I'm not sure what happened or even whether 1470 is still on the air these days.

Right - 1470 in the World Radio TV handbook is listed as WKAP (they were originally on 1320?) so I don't know what heppend to KAp's original frequency then. Presumabley WKAP is still adult standards.

The other station I never heard of - perhaps they were the FM sister at the time but FM wasn't that big in the 1960's, as we only listened to one of two FM'ers. --

Sean The Great wrote:

>Hopefully CBS, which refined the format at WFAN and has other successful all-sports
>stations around the country, can use that effective formula at WXYT.

Of course, CBS only inherited WFAN after it was already around a while. A
brief history as I understand it.

Emmis (owner of WHN/1050) decides to flip the station to all sports from
country music effective July 1 1987 at 3PM EDT. This becomes WFAN/1050

Emmis buys the WNBC/660 facility from NBC Radio (who is bailing on radio
completely) and moves WFAN there on Oct 7, 1988. Somewhere I have a copy of
the repeating loop that was played on 1050 for at least the first night
pointing people who were looking for the station over to 660.

This is where I get a little fuzzy. Clarification would help. I believe at
some point Infinity bought the station from Emmis, then CBS bought most of
Infinity and then Viacom and CBS merged. Does that about cover it? So
CBS/Viacom/Infinity just bought a station that already existed.

XERF is now owned by IMER, the Mexican Institute of Radio, and is reportedly running 10 kw days and, perhaps 50 at night. Transmitters in disrepair.

In the 60's, it was owned by the Mexican wife of Richard Eaton of United Broadcasting. The GM at the time, Sergio Ballesteros, is a friend of mine and now lives in Puerto Rico. There was, according to him, no Del Rio studio, but just a mail drop. Almost all the shows came on phone lines or were prerecorded and played a day later off tape.

In an interesting story, in about 1959 the partners who had been forced to go along with the majority owner in selling to Eaton tried to capture the station, and rode right into the lobby on horses carrying guns!

The local power grid could not handle the 250 kw transmitter (which ran only at night) so they had to generate their own power and also provided street lighting to the neighborhood.

I also recall the resurrection plant, the live baby chicks, the prayer table cloth and the autographed pictures of Jesus (Perhaps it was just Jes&#65533;s Gonz&#65533;lez, one of the employees...). Another friend, now a radio talk host, came from an upscale family on Miami Beach. She ordered baby chicks for all of her mother's stuffy friends, all of whom received boxes of 25 chicks, about half of which had expired in the mail.

XERF was a piece of radio history, alright.

On 1010, CFRB and WINS usually are near zero beat, sometimes at equal strength,
but depending on propagation CFRB usually wins (sorry) the battle.
>>

CFRB is notified as a Class A station, and therefore has both primary
(groundwave) and secondary (skywave) service areas; WINS is and always will be
a Class B station, and therefore has only a primary service area.

BTW, WINS' precdecessor was a daytimer on another frequency before NARBA.

>>

Yes, but the 250 kW Tx never worked properly, and the station operated at 50 kW until about 10 years ago.

The station has been operating at 10 kW for about the past 10 years.

The station has not applied for "grandfathered" status at 10 kW, and is still "notified" at 250 kW even though it has no capability to do so.

It is presently operated by an educational institution.

Recently this expression "The news starts now" seems to be showing up all over the place on tv. Hearing the same intro on multiple stations in the same market, with different owners, has me wondering what gives with this?
Pete

WCBN WILL DESTROY YOUR FEEBLE FORMATS

====data general==========
==www.umich.edu/~btausig===
==house=btausig@umich.edu==
==radio=music@wcbn.org=====

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Does anyone know if the new Toronto 740 station had to build a new
transmitter plant, or were they able to acquire the old CBL facility from
the CBC?

Emmis sold the station to Infinity only three or four years after it moved to
660, say 1991 or 1992. I want to say 1991 since Infinity started syndicating
Imus in July 1992 (Tampa and Boston were his first two markets).

Actually, IMER is a government bureau that is semi-autonomous and intended to be profitable in most markets while providing either coverage of underserved areas (rural or indigenous) or formats that are not preferred by other commercial broadcasters (classical, traditional Mexican, etc.) It has no educational stations.

The entity is typical of state-owned enterprises-for-profit... a bit less than professional and overstaffed.

Some consultant decided it was a good way to trick people into not
tuning out. TV news is full of this kind of crap. The two phrases
that stick out to me lately are "take a look," which turns up about
every other story, especially if the story would be utterly
insignificant without pictures; and "the very latest." (What's the
difference between "the latest" and "the very latest?" Seems to me
that the information is either the latest, or it isn't. Most times on
TV, it isn't.).

TV station owners pay thousands and thousands of dollars to
consultants to dream this stuff up. And when one station does it, the
others all follow suit. Then they wonder why their newscasts are
hemmorhaging viewers.

IMER-- the Mexican Radio Institute-- is an educational institution. But most of its stations are commercial operations. In fact it operates a few commercial pop FMs-- including one in Mexico City.

It's the golden rule. He who has the gold makes the rule. It's called de-regulation, and if you owned your own Congressman, you can do whatever you want too. Funny, in civilian life it's called extortion, in radio, it's called payola, or plugola, in Washington DC, it's called a campaign contribution.

It's a matter of time before you hear, "The chair now recognizes the Senator from Clear Channel." Invest in America, buy a Congressman.

Just listening to it right now, 20 miles East of NYC. Strong signal
with a S9 to S9+20 on the meter. I have not caught the call letters
yet. They just refer to themselves as AM 740.

Correction:

Emmis bought the frequency but did not move the station to WNBCs facilities.
WFAN has always been at the Kaufman Astoria Studios in Queens. There was talk
of moving the FAN to the CBS Broadcast Center on W. 57th Street but management
decided to keep it in Queens and the lease with Kaufman was renewed through
2010.

WLW 700 is often here in Milwaukee during the daytime...though quite weak of course.

When I was in Lubbock, Texas (1997-1998), KOA-Denver would sometimes make a daytime appearance on my GE-SuperRadio II, on the second floor of the graduate dormitory on the Texas Tech campus. I was quite impressed. Don't know what the actual distance was, but it has to be in the 300-500 mile range.

I have listened to KLVI-Beaumont, Texas (560) all the way from San Antonio, Texas to just outside of Baton Rouge, Louisiana while driving I-10. Impressive signal strength most of the way, too.

KVOZ in Laredo runs 10kw daytime and 1kw at night on 890. Their operator, Paulino Bernal, is a former band leader turned Spanish radio evangelist. Everyday, he personally prays for the first 40 people to call in with a $100 pledge. He's also asking for 5,000 people to come forward with $1,000 each to buy him a private jet. I also caught him one time selling house brand accordians for $1.300.

From what Scott Fybush reports, the new Toronto station is using the same site and antennas that CBL used. I believe the CBC still owns the facility, though. And I imagine it's safe to assumed the old transmitter is back on the air, too.

Updated Jul 17, 2000

Subject: Southern California Radio and TV Page

You can visit my Southern California Radio and TV Page at...
http://www.geocities.com/davidtanny/indexrad.htm

or

http://www.davesfunstuff.com/radio

Now with links to related news sites, as well as links to 13 messageboards!
I'm also accepting news bits to post in my Radio/TV news section.

Radio Station Logos section!

List of HDTV stations, plus a list of stations broadcasting in Spanish for
all of Southern California and Northern Baja.

Links to all the local area radio and TV stations that I know of, and noted
which ones are in Real Audio

DX catches in the So. Cal area plus all the DX stations in North Americal.

Frequency lists of the TV and cable sounds for those with scanners and
pocket VHF radios.

Expanded local AM and FM radio talk show listings. Formerly restricted to
morning drive shows, but this comes in handy since shows keep getting shuffled
around and times switch. Always accepting updates to the program guide.

The addition of four pages from the FCC database, reeditied into the local
AM, local FM, local TV and nighttime AM DX-ing radio stations. I wrote a
QBASIC program to compile the huge tables, but I changed no fact from the
databases, as they contain errors, especially with the Mexican stations and
owners. I should be updating this soon.
I still have my own four pages of AM, FM, TV and DX pages I composed with
formats and updated and corrected calls that I came across.

Some recent radio news of note on the front page.

good luck

Not very imaginative. At least Oral Roberts upped the stakes in his gimmemoney scheme by claiming his life was at stake if he didn't raise a certain amount. God was going to kill him if he didn't make his nut.

It's getting much harder to find an anchor issue now that humasexyuls are more accepted and the cold war dangers are gone.

Does he say how long he prays for that $100 contribution? Does anyone know if one problem takes more time than another. If you married your cousin would that warrant repeated sessions? Does he use the same "$2.00 a minute including holding time" scam that the "real" psychics use?

I would strongly suggest, in these MTV days, that he pick a different instrument to sell. Something that has 9mm on it, somewhere, maybe. I would think a sax might have more appeal to younger demos.

One final question: where is he going to fly in that personal jet? To accordian gigs or very remote revival meetings? Is there an airport in the old Mustang Ranch neighborhood?

Rich

238. NOAA weather radio

Newsgroup: rec.radio.broadcasting
Date: 2001-01-14 16:49:15 UTC
From: Paul Oeser <paul@oeser.net>
Message-ID: <t63m4bsdi3b6cd@corp.supernews.com>
Source record: 16249

Over the past few months I have noticed a decline in the information provided by the National weather service In nashville TN through the NOAA weather radio. I am not talking about the synthesized voice because I use one of them with my computer every day and am use to it.

I'm not sure how the system works. It sounds like they use a screen reader with a speech synthesizer. The staff at the National Weather Service type the information in and the screen reader with the speech synthesizer read the information back over the air. I think it works this way because of the many What I call careless errors I've noticed. Some of the errors are quite humorous. Our NOAA weather radio services gives us the forecast for cities within a e300 mile radius of Nashville. On thanksgiving day, NOAA weather radio said that Little Rock AR would have a low of 32 degrees and a high of 557 degrees. One of these errors occurs almost daily.

They also seem to be giving less information. They have changed the forecast for the cities within 300 miles of Nashville. They now tell us that the high should be in the 30's and the low should be in the 20's. In this forecast they use to give the nation's low and high for the day, they no longer do that. I realize that a change from giving the exact low and high temperature for a city and now say that the low should be in the 20's and the high should be in the 30's isn't much of a change but it seems to be a part of the pattern of overall change.

I don't necessarily like the changes be cause NOAA weather radio is the best place where I can get weather whenever I want it. However the weather channel on TV has moved up from totally useless to almost useless. They now have an audio voice that gives the temperature when the local weather comes on. It doesn't give the forecast, it just gives the temperature.

My longest "snag" was sometime around 1977: KFI (Los Angeles?)
picked up in Marion Ohio on a Pioneer Stereo with no external AM antenna
(just the bar-type that came with it) It was sky-wave, of course, as I
recall it was about 11pm.
At the time I would listen to CKLW Windsor, WJR Detroit and WOWO
Fort Wayne from Marion Ohio in the daytime with a great signal. All
three of these stations also came in very good in Dayton Ohio during the
daytime as well.
When I lived in Corpus Christi, Texas, I would listen to WLW
Cincinnati at night with a noisy but steady signal.

Here in New Orleans, there are two stations using the phrase "Right Now",
and in my hometown of Pittsburgh, there are two stations saying " Channel X
News Starts Now". It's effective, I think, as long as the news does indeed
start "right then", and the phrase is not simply the lead in to a "tease"
and then a cut to

Thanks to all who replied. That is the info I was looking for.

My grandfather did live ther for a while and was in radio
quite a bit. according to my mother, he also had a small
radio station that he ran with a friend of his, but I beleave
that was when they where living in up state New York.

He also had a small recording studio as well as working for
a subsidiery of Western Electric, converting silent-picture
movie houses to sound. He also had a chicken farm for a while.

Quite a varied life, I would say.

KOA has a very good signal. When I lived in Denver, I travelled to Montana a lot. I could always receive KOA in the daytime as far north as Sheridan, Wyoming, about 400 miles or so.

Paul.

Right on target, Mark. Here are some other examples or maybe just the peeves of an old crank: _All_ the weather folks in this market (and I suspect many, many other markets) cannot give the name of a day or day segment without inserting the word "your." Thus it's "...things look good for YOUR Sunday...your weekend...your Labor day' and so on and on and on. And how about this one? Around here (Des Moines), the TV weather folks are incapable of simply describing what's going to happen late at night or during the night. These days, it's always "THE overnight." In this market, because WHO radio uses stuff aired by the WHO-TV weather people (the stations are not co-owned, by the way--although that has nothing to do with it), the "YOUR" business

spreads to radio.

Also, what ever happened to the quaint idea of giving the time in reference to the _closest_ hour mark as in "it's twenty-one past nine" or "seventeen before three" or whatever? The younger air people, those who tend to use digital watches or have been exposed for too long to the digital time displays on modern consoles or studio mike and phone control pedestals insist on using terms like "it's nine twenty-one (not too bad) or "two forty-three" (terrible). Too me, trapped in the analog age, these locutions seem pretty strange. They're used mostly by former board ops who eventually find themselves working on the air. Most of them hardly know how to use an analog clock (you know, the clock with the hands and the numbers around the edge) even though we still have them on the walls (how charmingly retro!).

As for me, I can barely keep oriented using a digital time readout. I like the old-style clock because I can see how much of the "hour pie" I have left or need to get done what I have to do. Does this ring a bell with anybody?

Nah, I guess I just a cranky old guy. In fact, there's no doubt about that.

Have a great weekend everybody. Or, I guess I should say, "I hope things go well on YOUR Saturday...and on your Sunday, too."

Best,

Don Forsling

>
>Granted. How different would you say WFAN is now than when it started?

Imus' program has become a national player, as evidenced by Clinton's visits during his first presidential campaign;

their talk programming has gotten stronger, including Mike and Dog in the afternoon;

WFAN now actually carries NY pro football (Giants) whereas they only used to carry Eagles games in the early years;

By virtue of Infinity's deeper pockets (though Emmis isn't hurting, I would imagine), the programming on 660 has improved over the years.

-Sean

248. FS: stereo encoder, aphex digicoder

Mark Howell <mhowellkuzz@my-deja.com> had written:
|
| TV station owners pay thousands and thousands of dollars to
| consultants to dream this stuff up. And when one station does it, the
| others all follow suit. Then they wonder why their newscasts are
| hemmorhaging viewers.

So...I wonder how something like KTVK in Phoenix is doing. Its 10 pm 'NewShow' seems to be bending every rule in the consultant book. It's kind of fluffy at times, but at least it's trying to differentiate itself from the four other stations in Phoenix doing news at 10 pm (now that KPHO has finally decided to go to a full 35-minute cast).

What's becoming equally dull is all-news radio format clocks. Almost every one of them has traffic every ten minutes (usually "on the eights"), sports at :15 and :45, and network news or the top stories at the beginning of the hour. The top-story repeat cycle seems to be fixed now at half an hour. Yes, KNX is an exception with a six-minute-or-so traffic cycle, but I can't think of any other exceptions.

Likewise, morning-drive spots always show up at :50 and :20. I can time my morning commute to it. That's when the car radio gets tuned to NPR or Pacifica.

This site is worth a visit at http://www.nwlink.com/~kc7ldp

(I have no connection with it, just want to give it a plug)

"A comprehensive web site about the history of the world's premiere broadcasting reference source."

Hopefully, this web site will turn into one of the most detailed and accurate sources for information about the World Radio-TV Handbook in all its forms.

The World Radio Handbook has been published every year since 1947. The winter edition or first edition for 1947 was released in November; the second edition, May-November 1948, was completed in May 1948 and the third edition was printed for November 1948-May 1949 and was released in November. The fourth edition seems to be the first full-year edition printed, although there is still some confusion on this. The fifth edition covers both 1950/1951.

If information contrary to this presents itself, I will immediately update this site to reflect the facts.

The World Radio Handbook appears to have had quarterly updates from 1954 until 1959 known as the World Radio Bulletin. These continued until 1991, different only in name; the Bulletin, Newsletter and Downlink.

From 1960 until 1971, the WRTH also published its Summer Supplement; which in 1967 and 1969 reached 184 pages! Half again the size of the yearly WRTH. Site link below.

Another publication by the WRH/WRTH was 'Listen To The World'. These books contained various articles about DXing and SW listening and appears to have been published since 1950 until 'Listen To The World' was incorporated into the WRTH in 1976. In 1978 another publication made its debut, 'World DX Guide', which was in the exact size and format as LTTW. A site link to 'Listen To The World' is included.

Source record: 16270

Imus had a piece so funny this morning that I was in tears, using
Lee Davis, Vice President and General Manager of WFAN

http://rhhardin.home.mindspring.com/imuscut.leedavis.ra (363k)

The first part is Lee Davis reading an apology to listeners for
allowing WQXI's Steak Shapiro to appear on the program, as part
of a continuing premise that Steak aspires to be one of the guys
and Imus makes him miserable, the zinger being that Imus
aspires to break frame and make Steak actually miserable in spite
of Steak knowing this all perfectly well. It's a little tedious but
okay.

The second part is playing of the outtakes of the manager
Lee Davis trying to read the script, giving Davis a further opportunity
to be a good sport. This is a scream, if you've ever had a manager.

I favor http://www.wunderground.com/forecasts/dca.html as a good place
to obtain the weather. Substitute you own town for the DCA (in your
case bna I think). If you don't know the abreviation, type in your town
name at the top and bookmark the forecast when it appears.

I also use
http://www.intellicast.com/LocalWeather/World/UnitedStates/Radar/ to get
the national radar. Click on any area for an expanded view of that
area.

Depends on what you mean by "a 5000 watt signal." This station likely has a directional antenna system, meaning that *in some directions* the signal could be several times as strong as that of a 5000-watt station running into an omnidirectional antenna.

For TV and FM radio the FCC and others use the concept of "effective radiated power," where 3000 watts ERP (for example) means the same degree of radiation you'd get by putting that much power into an isotropic dipole, even though most facilities would use a more efficient antenna with less RF going into it to achieve the same end result.

The 105.3 signal is being downgraded -- it will move to 105.5 and become
a class C3. It now has the WAYS calls and will have the oldies format
when it returns to the air. The downgrade allows WYAI 105.5 Bowdon GA to
move to 105.3, increase to a class C1, to target Atlanta. WYAI has
been bought by Clear Channel to add to its other stations in Atlanta.

The FCC also just approved WPEZ 107.9 Macon's move into the Atlanta market --
move to Hampton GA, downgrade to a class C2 station, but with a tower move
that gives it Atlanta coverage.

I don't know about Phoenix, but generally speaking TV news has been losing viewers for years. In my market, the total rating (not share) for three stations has shrunk from close to 60, to about 25, for the most-viewed hour. Twenty years ago, the #1 station alone had about a 40.

You are right about all-news radio being predictable, but the typical all-news listener considers that a benefit. People often time their daily activities to the programming elements, especially in the morning. Believe it or not, the fact that you can time your commute to it, is something most listeners like. And there is one other station I know of breaking the "traffic every 10 minutes" mold. It is KFWB, Los Angeles, which does traffic every 5 minutes, although the updates not on the "ones" are very brief.

I remember when I was in Officer Training School in the Air Force, the trainer would say "Mr. _____, what time is it?" The appropriate answer was to be in military 24 hour time. One of the cadets said "It's a quarter to 1500 hours." That didn't go over very well.

When I was doing mornings on AM radio in the 70's, we did what was called "double time." "Its 7:45, 15 minutes before eight." It was really funny when it got screwed up.

Yes, especially on a relatively clear frequency and on a low dial position.

Blame The Weather Channel for that--they were doing it for years, although it seems to have been cut down somewhat (at about the same time they increased the wardrobe allowance for their talent--coincidence?). However, since medium market weather people want to be on TWC in the worst way if they can't get the higher paying major market gig, they seem to want emulate them as much as possible.

The Dallas Morning News reports that Clear Channel is trying to buy KJOI 1190am so it can put Fox Sports Radio on the air here. The column also speculates that Jim Rome's show would be part of the deal.

Has anyone heard much about Fox Sports Radio? I've listened on the internet just a little bit, but haven't heard what their entire schedule really sounds like.

I find the same thing in NH, the forcast we get is more of one
for Maine. I've just about given up on NOAA. There are numerous
sites on the internet where you can get a forecast specific to
your county.

When was the last major change made to all-news stations' clocks--when Ken Draper created the 20-minute wheel all those years ago at KFWB?

> Likewise, morning-drive spots always show up at :50 and :20. I can
> time my morning commute to it. That's when the car radio gets tuned

I'm curious, Mark--does KQED air the headlines segments on "Morning Edition" at :20 and :50? In Chicago, longer traffic reports and funding plugs have made "Good morning, this is Carl Kasul with these headlines..." virtually extinct.

Why would temperature have any affect on ground conductivity?

AFAIK ground conductivity is mostly determined by moisture content and
soluble salt content.

>I'm considering the purchase of a small-market FM and am looking for insights with regard to the not-so-obvious pitfalls...<

I think your best bet is to find a person that does "due diligence" inspections for hire...the sort of person that does FCC compliance checks. Your state broadcasting association can often point you in the right direction. Typically these folks are ex-engineers, and a few are even ex-FCC inspectors. They've been down the pike a few times and know what to look for.

The separate ASCAP/BMI fees for online streaming were just announced, and the battle is far from over. My bet is that broadcasters will keep that one tied up in courts for years.

Reminds me of a preacher on XERF 30-some years ago. You could get a $5
blessing, a $10 one, or the big $25 dollar blessing. The GM asked the
preacher what the difference was between a $5 blessing and a $25 one. The
answer: "$20 dollars."

Did anyone pick these this transmission up in the USA?

From: DX Listening Digest 1-007 by ghauser@hotmail.com

On Sunday 14 January 2001 I heard Radio Caroline announce at 16:15 UT that they were broadcasting to the USA on Satcom C3, 131 degrees west. I cannot remember the full details, but I am sure you will find them on either:-

http://www.radiocaroline.co.uk or http://www.radio-caroline.nl

The last-mentioned of these websites provides audio round the clock from Radio Caroline. However, I suspect that the Satcom C3 transmissions will only be available at the same times as the transmissions on Astra to Europe, and perhaps not all of those. For your information, the current times on Astra to Europe are:-

Thursday and Friday 17:30 to 24:00; Saturday and Sunday 08:00-24:00; Monday and Tuesday 18:00-24:00. There are currently no broadcasts on Wednesdays, but I am sure there will be before long.

Radio Caroline is also broadcast on a number of FM stations in Europe at various times, though I do not have any details of those (PAUL DAVID, uk, Jan 14, DX LISTENING DIGEST)

Yes...I actually visited it one Sunday afternoon. It was off the air but there was an engineer doing some maintenance. He told me the station supplied street lighting for the neighborhood.

I had more than an idle interest in XERF. It was a contributor to my continued health and well being. At the time I was a USAF Jet Basic flight instructor at Laredo AFB, down the river from Del Rio.

We did a lot of night flying. In the early 60's our Lockheed T-33 jet trainers had no VOR or DME navigational aids...just low frequency AM ADF homing radios (and ILS). The T-33 had enough performance to get you away from home port in a hurry and burned fuel rapidly enough to get you into trouble equally fast if you did not maintain good "situational awareness."

Nights can be dark in southwest Texas with not too many ground-lights for reference. The 1 kw low frequency navigational beacon at Laredo was puny at best and easily obliterated by area thunderstorms.

That is where the big-watts of XERF were a confidence builder. Granted it was well north of Laredo, but putting the ADF on XERF at least kept you orientated generally into the quadrant where you were supposed to be, east of Mexico and south of Del Rio.

I spent lots of dark nights above 30,000 feet watching for guidance an ADF needle pointing toward Sister Rosetta Blankenship and the XERF Prisoner's Bible Hour.

What really amuses me is the lemming herd mentality most
broadcasters show these days. Are they all using the same
consultants? Is there no one at these stations capable of independent
creative thought?
In this market the latest thing on the morning news broadcasts is
regularly-timed weather inserts. Channel 7 has "Weather On The
Sevens" which takes place at 07, 17, 27, 37, 47 and 57 past the hour.
Their closest competitor, Channel 9, does it at 09, 19, 29, 39, 49 and
59 past the hour. What is weird is how they both started doing that
at about the same time.
We just got through the Great Weather Radar Race about this same
time last year. Our local NBC affiliate has its own private Doppler
weather radar, the only such installation in the market. Now the
other two VHF news stations are trying to make it sound like they have
their own radar systems when it is obvious they are both still getting
their info from the NWS.
Nutty business, innit?

Mark Howell <mhowellkuzz@my-deja.com> had written:
|
| I don't know about Phoenix, but generally speaking TV news has been
| losing viewers for years.

The reason I ask about KTVK is that it deliberately has tried to break some of the usual conventions of TV news as far as presentation and story selection are concerned. The bad news is that the amount of "fluff" (by my cranky estimation) is way up on some of the KTVK casts. But other KTVK newscasts show that the station has a fairly solid corps of journalists working for it. Overall, the record is mixed, but I am wondering how the numbers are turning out.

| You are right about all-news radio being predictable, but the typical
| all-news listener considers that a benefit.

And you are absolutely right: it is a benefit. Predictability indeed is a benefit as long as it doesn't become a straightjacket or lead to an outright loss of flexibility. There is a balance that has to be maintained.

I know I time my own morning commute to KCBS. It should also be noted that KCBS isn't afraid to "bend" its news wheel when stories warrant. It's very good, for instance, at adding extra traffic drop-ins for out-of-the-ordinary traffic incidents in the Bay Area.

No real argument with what you say, just a couple of nits to pick. By FCC convention, ERP in the FM and TV services is expressed relative to a half wave dipole. In the microwave and some other services, ERP is expressed relative to an isotropic radiator and is abbreviated EIRP.

The term isotropic dipole is a self contradiction. An antenna is a dipole or an isotropic radiator. It can't be both. In the real world it can't actually even be an isotropic radiator. An isotropic radiator is a theoretical construct that can only be approximated in the real world.

The term ERP isn't generally used in the AM service, though you do see the term "equivalent radiated power". I believe it is defined as the power radiated in a specific direction from a directional antenna system as compared to a standard 1/4 wave vertical monopole over a standard ground system. That is, if a transmitter of power equal to the "equivalent radiated power" were connected to a 1/4 wave monopole, the field strength produced at a given point would be the same as that measured when a transmitter of the licensed power is connected to the directional antenna.

Gray

I am not much of a sports fan; however; I find true sports talk like
Randy Galloway , Chuck Cooperstein(sp?),that does not just talk about
sex in the most degrading ways is more interesting than most of what
passes for Sports Talk that I hear on the radio in Dallas.
Unfortunately, it seems to be the case in other markets as well from
what I have seen mentioned in different news groups.
Though there is a station with sports that carries ESPN that I hear at
night on 1670, though now I have noticed a station relaying NOAA weather
on 1670.

Your post about the weather really struck a chord with me. Here in New Orleans on WDSU Channel 6, we have "traffic and weather on the sixes" At WTAE Channel 4 in Pittsburgh, they have "Weather on the fours". I don't know about anyone else, but this has always sounded rather silly to me.

Concerning Doppler Radar, I find it amusing that stations make up their own proprietary names for the same type of radar system. Channel 4 has "PinPoint Doppler", and channel 6 has the even more impressive sounding "Super Doppler 6000".

WDSU channel 6 has built their entire weather image around their radar. The meteorologists are called the " Super Doppler 6000 Storm Team", and they have a weather set chock full of eye candy which they call the Super Doppler Weather Center". People in the industry understand why this kind of thing is done, but every once in awhile I wonder if the general public also thinks some of it is a little silly. I wonder if sometimes the stations take things a little too far in their effort to distinguish themselves from competitors.

Two methods come to mind.

1) Self cancellation.

Depending on the vertical radiation pattern of the antenna and the
height of the reflecting layer in the ionosphere there will an area(s)
where a station's groundwave signal will be canceled by its own skywave signal.

2) Interference

Very frequently a station's coverage area is not so much determined by
signal strength but by received interference. On most channels there
will be a significant increase in cochannel interference at night
because of skywave.

>signal *lose* distance at night?

KFYI is 5kw days and nights, but uses a 4-tower directional antenna array at
night.
They shoot the vast majority of their 5,000 watts due south. The people
south of Phoenix get a much stronger signal at night than they do during the
day.
Unless 910 kHz is a regional channel with a high noise level, their
nighttime coverage would be much better. However, Quartzsite is WNW of
Phoenix, so it doesn't make sense unless KFYI was using their day pattern
after dark.
Nevertheless, your question asks: how can an omnidirectional AM station lose
distance at night?
With the exception of the Class A clear channels, the noise-level on a
medium wave (AM) frequency is much worse at night due to skywave refraction.
There are hundreds of station in America that operate on "local" frequencies
(1240 kHz and 1340 kHz are two examples) and are Class D stations. They
broadcast with 1kw day and night. During the day their signals may travel
up to 100 miles, but at night they are barely audible 10 miles from the
transmitter.
The difference is the noise level on their frequency. Most AM stations
nighttime coverage is much worse than daytime coverage, and their power
level and/or antenna pattern is only part of the reason.

I liked the one I dealt with years ago. A preacher would sell you a
prayer shawl. It had a certain amount of grace in it. Every few months
you had to send it back for a "grace job" for a fee. They did nothing
but slap a label on your box and mail it back but you were covered
while it was in transit by putting your hands on the radio for a shot
of grace to hold you over until the shawl came back.

I believe there's a special place in hell where the thermostat is
stuck in high just for these people.

Rich

325. WorldSpace plan European Satellite

Newsgroup: rec.radio.broadcasting
Date: 2001-01-18 17:51:46 UTC
From: Mike Terry <michael.terry1@virgin.net>
Message-ID: <t6eb9ih263i3dc@corp.supernews.com>
Source record: 16186
Cross-posted to: alt.radio.international,alt.satellite.radio.europe,rec.radio.broadcasting,uk.radio

I have a WorldSpace receiver and think this is brilliant news for Europe:

Here is the text of a Press Release from Worldspace, Paris January 8th:

Worldspace, the first global operator of satellite digital audio broadcasting systems and Alcatel Space, the world leader in the design and manufature of satellite DAB technologies, signed a strategic partnership agreement to develop a space based digital sound broadcasting system for Europe.

Under the terms of the agreement, signed January 4th 2001, both companies will explore the possibility of forming a consortium in order to implement a European satellite-DSB system. This consortium will provide the opportunity for other investors and strategic partners to participate in the project.

Worldspace and Alcatel Space expect the planned system to provide seamless coverage over the European continent, offering programmes of crystal-clear quality to users with mobile(in-car), fixed and portable radios. Of particular note: the satellite system will be able to provide continuous mobile reception of audio programmes over Europe with the potential to introduce local content over urban areas through a terrestrial component.

In addition to broadcasting a choice of up to 100 existing or new radio programs, the system will allow users to access multi-media services such as

text and image transmission ancillary to the audio programmes: and traffic reports, weather forecasts, and information updates for navigation

Worldspace is the first global company to offer satellite-baes digital audio broadcasting services to portable receivers. The Worldspace system currently consists of 2 satellites: Afristar. covering Africa and the Middle East, and AsiaStar, covering all of Asia. AmeriStar will be launched this year to cover Latin America and the Caribbean. Worldspace has recently tested and proven a terrestrial component to its system, which allows the satellite programs to be rebroadcast in urban areas in order to provide seamless mobile reception.

Alcatel Space is the prime contractor for the Worldspace system. Worldspace and Alcatel have also taken part in the deisgn of the US XM satellite Radio System, for which Alcatel is manufacturing the payload. Most of the technologies to be used in the European digital audio broadcasting system have therefore already been proven. In order to maximise its performance, this system will benefit from state-of-the-art audio compression standards that make efficient use of spectrum resources.

Jean-Claude Husson, President and CEO of Alcatel Space said, "This project will allow broadcasters to offer their programmes with an outstanding quality, an exceptional comfort, within the entirity of the European continent, avoiding the multiplication of terrestrial retransmission and their resulting frequency shifts.

Listener will be able to entertain programmes of their choice, in particular in their mother languages, and this while being within or outside their home country or on a journey.

The European satellite system will complete the existing operational Worldspace system, which already covers Africa, the Middle East and Asia and will offer services comparable to the XM Satellite system in the US.

Alcatel is proud to industrially participate to all these systems. The industrial return for the European industry is significant."

Noah A. Samara, Chairman and CEO of Worldspace, said the agreement marks another very important step in the Worldspace mission to bring high quality digital audio and multimedia programming via satellite to consumers on a global level. "Ever since Worldspace began commercial operation we have seen a consistently strong desire from European consumers to access our unique services. This agreement will make that possible. We are proud to serve the people of Europe and will work closely with Alcatel Space to assemble a compelling variety of content representative of the tastes and cultures of the European audiences that the system will serve."

WorldSpace and Alcatel Space report that the enthusiasm shown by radio broadcasters, car and radio manufacturers enables the two Companies to consider a service launch in 2003.

>how many calls constitutes a flood?

Come now Rich, if they have eight lines or so, they're the equal of most large setups with local talk, if they have four, they can still keep a reasonable talk format going and do some screening. Besides, we both know that getting folks to call isn't the big thing, it's getting folks to listen that counts and most listeners don't call talk radio if I remember correctly. Besides, many stations now would die to have the audience Jean Shepherd had on your station way back when, and he didn't take calls but talked and talked.

>>
Unless 910 kHz is a regional channel with a high noise level, their nighttime coverage would be much better ...
>>

910 in Phoenix (a Class III-A station) is compromized by the existence of a Class III-A station in Oakland, CA, and *three* Class III-B stations in Southern California: Oxnard, El Cajon (San Diego) and Hesperia. Plus a Class III-B in Vancouver, WA (Portland, OR). The San Diego and Portland stations operate 5 kW full-time. All of these being directional.

Oh, and a Class III-B ND in Mexicali, Mexico and a Class III-A ND in Denver, CO.

In this perspective, Phoenix's 910 is severely compromized.

It does, however, have exceptional coverage in Northern Mexico (excepting BCN) and in Mexico, BCS.

Jeffries, Mark <MJeffries@KRW.com> had written:
| I'm curious, Mark--does KQED air the headlines segments on "Morning Edition"
| at :20 and :50?

It's traffic and weather reports (intro'ed and read, respectively,
by the incomparable Norm Howard or by the amazingly unflappable Matt
Elmore, who's also the "voice" of KQED-TV).

KALW does offer an alternate feed of ME that's available in many
parts of the Bay Area. I think it does run the ME headlines. It
does replace NPR news with BBC news on some hours (e.g. 8 am).

If you made a 1/2-Fast effort doing web searches, you could fill in
most of this information yourself.

You could also visit a big library that has Broadcasting annuals in
their stacks.

I think it's time for this author to start doing his own research.

XERF did have a regular preacher who often said, "put you hand on the radio and feel the power of the Lord." This was accompanied by the playing of a 25 Hz tone, which caused the radio to vibrate near-noiselessly. Which in turn caused the listeners to send money to the preacher.

Turn up the heat, please.

They've been there since the early 70's (possibly longer) when I used
to listen to that station growing up in eastern NC. 105.5 MHz

(from an earlier "name that station" post):

>Big Wise...Lucky 13 might not even be a radio station

This is probably WISE in Asheville NC 1310 kHz.

There was a station in the Chicago suburb of Elmwood Park on 105.9 with
this call..
It is presently WCKG
> 39 WE FM 99
There was a WEFM in Chicago on 99.5. It was owned by Zenith Radio.
> 51 WYYY Radio 1470
Probably WYYY, Kalamazoo, MI (500 watt daytimer). Originally it was
WKLZ, then WYYY then
either WKLZ or WQSN when day and night DA-2 was added from a new site.
They received a
X-Band station on 1660 which is now WQSN and WKLZ is on 1470.
> 72 WWAM 1370 AM/92.9 FM
Cadillac, MI. Is now WKJF-AM/FM. 5,000/1000 DA-2, 100KW@1000 feet.
Studios and FM transmitter were co-located with WWTV, hence the call
letters.
TV was sold and studios were moved into town and the call letters
changed to WKJF.
This one I know a lot about. I could still probably find my way to the
studios and transmitter sites in my sleep even if it was a 3 hour drive.

Nope. It's running some sort of Asian-language programming, if I
recall correctly.

So is it a law that owners can't own TV and Radio stations in the same market that Clear Channel somehow got around?

Or is there no such law?

Well, they certainly should know the key people in the community,
where to go for information, what's important to local folks, and
what's not. They'll know the history behind long-running stories and
why they're important. They'll know when it's important to report that
somebody died who wasn't a celebrity, but may have played a huge role
in some community event or activity. They'll know who's affected by
some big national story.

Most TV people are itinerants who care only for their next job, and
know or care little about the communities on which they report, and it
shows. Those shops that can maintain some stability and have people
with roots in the community have a distinct advantage in their ability
to cover local news. I see it in my market every day.

Now whether they use that ability, is a different subject.

As in single programming source, but with different spots run on the different feeds? This, I believe is done a bit in Canada by the stations that have repeaters in a region as a way to do local spots in each locale. Suggest e-mailing the different manufacturers like BE, Prophet, Dalet (I know they do this in Europe), Scott Studios, etc. and ask the question of them.

I'm still looking for a definition of "flood." Since it's not a term
that easily quantifies the number of calls I can only assume it's
puffery worthy of press releases and commercials.

I live less than 60 miles from WLAC and another station covers it from about 4:30 to 6pm central or so. I have heavy interference on 1510 most nights now too. Wasn't LAC on a clear freq? Could it be that a station that is supposed to lower power at sunset or change direction is waiting for an hour or 2 after sunset? Sounds like a gospel music station.

I think that we are talking about the nearly total lack of audience these
days to short-wave radio in general.

re: preacher playing 25 Hz tone on radio to attract listeners

Coincidentally, stations that broadcast in AM Stereo all use a 25 Hz pilot tone to signal the receiver to enter Stereo mode. The only possible difference is that the 25 Hz pilot tone is out-of-phase, so that mono listeners won't hear it. But if you have an AM Stereo radio tuned to an AM Stereo station and turn the volume up enough, you can actually see your speakers "thumping" along with the 25 Hz tone.

Clear Channel doesn't have to follow any rules, as in Chicago they just stole the format, name of a competing station, (kiss fm) and the competing stations slogan: "ALL the hits on one station." As soon as they start having DJs, rumour has it they will have them use the same names as the DJs use on the other station. The only difference will be the frequency 103.5 instead of 92.7 If they could figure out a way to steal that, they would have.

Clear Channel's new philosophy is, let's find a station in the market that we like, then steal their name, slogan and playlist. But that's not all, they are also SUING the station that they stole everything from!

What a bunch of assholes!

Actually, as a former employee of WTTS, I was under the impression (from the employee info packets) that WTTS-FM started out as WGCL-FM...And the AM sister station (now WGCL) started out as WTTS-AM. While Sarkes Tarzian owned both the radio stations and WTTV-TV at the same time, I'm not positive that WTTV-FM was part of the ST family.

That one's a little weird. WTTV(TV) was the sister station of WTTS(AM), but for some reason the FM station shared the TV's call rather than that of their AM sibling. Even weirder, the WTTS call is no longer used on the AM station, now WGCL.

AFAIK, the only laws restricting TV ownership have to do with foreign ownership, or newspapers (co)ownership. A broadcasting company has always been allowed to own both radio & TV properties.

> market that Clear Channel somehow got around?
>
> Or is there no such law?

No. There are restrictions that reduce the number of radio stations a party
can own if they also own TV stations.

The crossownership law that is currently under scrutiny involves the
inability of Newspapers to buy radio and TV stations. However,t here are
plenty of grandfathered situations where preexisting ownership was allowed
to stand.

> 34 WXFM 106

Jazz and variety station WXFM 105.9 Elmwood Park-Chicago... Switched to Top-40 WAGO (G-106) back in about 1983, then again about 18 months later to classic-rock WCKG, which has transformed into a talk station

> 39 WE FM 99

Named after founder Edward F. MacDonald, owned for many years by Zenith, Chicago's first commercial FM station. I believe this one started life in the old Armstrong band, then moved to 99.5. Was classical until 1977, switched to Top 40 with the "We-FM" moniker, then dumped the callsign in 1981 for the current WUSN call; has been "US-99" (country) since.

> 49 WNIU 89.5 FM

Northern Illinois University, activited WNIJ on 89.5 FM (NPR outlet) in the mid-90s, moving their all-classical format and callsign to a new frequency of 90.5. WNIU 90.5 shows "WNIU" on RDS-equipped receivers.

> 57 WCLR 102 FM

"Clear 102" FM, WCLR Skokie-Chicago, changed the callsign and moniker to WTMX "Mix 102 FM" around 1989, and since then has only adjusted their moniker to "Mix 101.9".

I live less than 60 miles from WLAC and another station covers it from about 4:30 to 6pm central or so. I have heavy interference on 1510 most nights now too.

>>
Wasn't LAC on a clear freq?
>>

1510 is indeed a U.S. Clear channel, but WLAC is a Class I-B station, as is co-channel KGA.

But in a strange twist of fate, a Class II-B station in Boston has a priority on 1510 as well, so WLAC must protect this Boston station of lower class.

WLAC has deep nulls towards Spokane, WA (the Class I-B station) and towards Boston (the Class II-B sation). Also, a well-filled null (a minima, really) towards the Gulf of Mexico.

This pattern is produced by an asymmetric three-tower array.

I've heard them too. In South Central Indiana (since the downgrade of
WOWO), there are now only 3 dominant stations on the AM band at night. They
are WLW, WHAS (although we get some skywave/groundwave cancellation on WHAS
at night) and WLAC. We are in a major lobe of WLAC's night time pattern and
WLAC has always been strong here. But beginning some time after Halloween,
WLAC has getting plastered by what appears to be a gospel station until 8 or
9 EST. Somebody out there is misbehaving...

Yes,KOY moved from 550 to 1230 a couple of years ago. KOY is one of those omni stations we were talking about before- that loses mileage at night due to the skywave.(1230 is a 1,000 watt 24 hour nondirectional. Lots of old people- it's an adult standards station- got ticked off when KOY moved from the strong 550 to the so-so 1230 because it has a very weak signal at night,even for a local station. KFYI is the only station within several hundred miles on 550, while there are many within several hundred miles on 1230. By the way, before KFYI took over 550, KGME was the station that switched with KOY on 550.KGME had been on 1360 before that.1360 is now KPXQ,religion/talk. So many switches...)

There is some audience on shortwave radio. WWCR et al do prove that. Somebody is willing to pay to be broadcast over said stations. Admittedly the audience may be small, but somebody is sending the folks who sponsor the programs money to buy the time or sending the stations money (ala WWCR requesting listeners to send in money for their favorite programs and warning that it won't be tax deductible). Shortwave especially in the US isn't much listened to, but in part that's also because its programming doesn't really attract large audiences either. If you listen to US broadcasting, you'ld assume that we were the most religious folks on earth. Still just like internet advertising, without lots of local sales, it's difficult to interest most of the folks who would pay to reach the audience. National accounts are nice, but they don't pay the freight at radio stations in the US either.

The Boston station is all-sports, owned by One-on-One Sports and one of their 24-hour affiliates. And WNRB, the Boston station, protects WLAC, with a deep null to the southwest and west at night (and during the day).

(...)

I am sorry, but I have some serious doubts about this.
Is this going to be pay-radio or FTA?
In case of pay, I wonder how many people in Europe will be prepared to
pay for something you can also get for free.
If this is 'free', and this only must be payed by the broadcasters, I
have some serious doubts about the economics of this.

Also take a look at DRM (Digital Radio Mondiale): http://www.drm.org/,
a new proposal for specifications from the EBU for digital broadcasting
below the 30 Mhz. (MW, SW and LW).

> Under the terms of the agreement, signed January 4th 2001, both companies
> will explore the possibility of forming a consortium in order to implement a
> European satellite-DSB system. This consortium will provide the opportunity
> for other investors and strategic partners to participate in the project.
... will explore the possibility ...
Doesn't sound like it will be for tomorrow, but let give them the
advantage of the doubt.

For the rest, I don't think that there are a large number of people
who travel across Europe every-day; so I don't really see the advantage
for the user.

So, what advantage does this system have to nationwide terrestal DAB?

Cheerio! Kr. Bonne.

>>

Boston's 1510 is a DA-3 operation ... directional days, critical hours and nights, using three separate patterns.

Nights, there is a near total null towards WLAC.

>>
Wonder who I should complain too?
>>

The FCC.

>>
One sunday night I had a lot of splatter on WSM 650. It turned out to be a station on 640 in Atlanta. All it took was one call to Watt at WSM and I haven't had any more splatter!
>>

Class II-B stations are required to protect a first adjacent-channel station that is a Class I-A, Class I-B or Class I-N. WSM is a Class I-A, so that station on 640 is required to protect WSM's primary service area at night.

>>
BTW, I can't hear WHAS like I used too. 1530 WSAI has been booming though!
>>

WHAS/840 is non-directional. WSAI/1530 is directional nights, with nearly no power being directed west (and towards co-channel KFBK in Sacramento, CA). But while WSAI's night pattern has a null (towards KFBK) is also has two minima (towards the SW and towards the NE) and three maxima (towards the N, towards the W and towards the S).

If you're in one of WSAI's maxima, you're receiving the equivalent of several hundred kW, compared to WHAS's half-a-hundred kW.

Honestly, I don't know why U.S. ND Class I stations aren't allowed to operate with 100 kW days, as most of the Mexicans do.

Oh, that's right ... one U.S. Class I operates with 50 kW into the antenna system, but with 35 kW into the antenna itself and 15 kW dissipated as heat into a resistor.

So this Class I station should be allowed to operate with the full 50 kW days,
but would have to revert to 35 kW nights.

NPR would be perfect on shortwave. Few would ever choose to
listen that way to a program that was available in local hi-fi,
so shortwave would serve one of the purposes of streaming, a
lo-fi alternative delivery that wouldn't undermine stations much
if they also carried the show. Still that's probably too big an
"if" for the stations to accept.

I actually think shortwave could have a pretty promising
future. What is *required* for its dignified survival is a
technology that abolishes dial positions, a digital carrier guide
signal that allows listeners to press a button and lock it into
the BBC. Have the system decide for you the best way to access a
service from among available feeds.

Jerome

With my GE SuperRadio III, or even on my car radio on the way to work (north of Boston) WCBS can be heard during the day.

WFAN, on the other hand, *is* a problem, at least up here in the Merrimack Valley, because of WRKO at 680. IIRC, their signal is beamed from Burlington and is extremely strong toward the Northeast. While the pattern is such to protect other signals, this is probably a carryover from the days when WLAW had the 680 frequency and was licensed to Lawrence, not Boston. When WNAC took over that slot on the dial , they were still licensed to Lawrence through the 1950s.

I may have mentioned this before - but in the early-mid 1960s, there were two Boston based rock'n'roll stations. One was WBZ, but they went to a call-in talk show in the evening - Bob Kennedy's "Contact" show, which was the forerunner to the present day David Brudnoy show. And WMEX could not be heard at night. So kids in the Merrimack Valley listed to .... WABC, New York.

n0jaa@aol (N0JAA) asks ...

>>
I know what a Class-A station, and a Class-B, station are, but can someone explain to me what these other classes are?
>>

Any Class I station is a Class A station.

Any Class II or Class III station is a Class B station.

Any Class IV stations is a Class C station.

Any daytimer is a Class D station.

Class A stations include: Class I-A, Class I-B and Class I-N (Class I-N stations are assinged only to the non-contiguous United States). Class A stations operate only on clear channels.

Class B stations include: Class II-A stations (which are actually included abong the Class A stations in some FCC documents), Class II-B stations, Class III-A station and Class III-B stations. Class II stations operate only on clear channels; Class III stations operate only on regional channels.

Class C stations include: Class IV stations (these are limited to 1000 watts in the contiguous 48 states) and certain stations which were originally licensed on a Class III frequency, but as a Class IV station (these are limited to 100 watts). Class IV stations operate only on local channels.

Outside the contiguous 48 states, Class B stations may be assigned to Class IV channels.

sean7897@aol.community (Sean The Great) commented ...

>>
The Boston station is all-sports, owned by One-on-One Sports and one of their 24-hour affiliates. And WNRB, the Boston station, protects WLAC, with a deep null to the southwest and west at night (and during the day).
>>

WNRB has a "historical" priority on 1510 even though it is not a Class I station.

WNRB does protect WLAC consistent with WLAC's Class I-B status, but WLAC protects WNRB's "historical" priority on 1510.

The only Class I station on 1510 which does not protect more than one station is KGA, and KGA protects only WLAC.

Carefully check WLAC's theoretical night pattern and you'll find that there are nearly complete nulls, towards KGA and WNRB, with WLAC protecting KGA to about 10 watts equivalent, and WNRB to about 150 watts, equivalent.

But then check WLAC's augmented night pattern and you'll find that WLAC protects KGA to about 1 kW, equivalent, and WNRB to about 2 kW, equivalent.

WNRB doesn't use an augmented pattern, but if you check WNRB's standard pattern for its night DA, you'll find that WNRB protects WLAC to about 150 watts, equivalent.

WNRB also protects a "notified" but non-existent station in Canada.

I know 1510 is a station in the Beaumont-Port Arthur TX area..
used to be KYKR AM years ago....I cannot recall their current
call but they are doing Gospel...as a teenager when they were a
country (KYKR), I listened for them to sign off at sundown so
I could listen to the WLAC Top40 format back in the 70s...
It was great! But then they changed format and I quit listening to
them.

Just today (Jan 20) I copied Toronto's ``AM 740'' clear channel station
in Central Ohio all day long, a distance of 300 miles.

All the daytime hourly news intros from 8am to 6pm are saved at
http://rhhardin.home.mindspring.com/cbl.ra (189k) just to
illustrate.

Worst fading is at sunrise (7:45) and sunset (5:30).
It's fairly constant in the daytime otherwise, low but listenable,
and then very strong at night of course.

In the United States, we have never been exposed to media from different countries on any great scale.

Shortwave radio was a way to obtain the other side of a story from non-US sources. It was also a way to hear stories not covered or deemed interesting by the American commercial news broadcasters. However, since you can hear overseas news on the Internet, including many outlets designed to appeal to a country's domestic audience, shortwave has become less appealing. Most middle-class Americans are 'online' now, so if you really want to hear the BBC World News, or some other country's news, you don't need to get a SW receiver, or even dig through the non-comm FM jungle to find the occasional broadcast. The BBC web site allows you to listen to the world service and most domestic programming in real-time, and its site also offers news-on-demand. And other sites have similar offerings.

With satellite technology and cheap relay stations, there also isn't an extensive need for countries to use SWBC to reach its own population. Twenty years ago, SWBC was huge in Central and South America and Africa (and probably Asia too) and used on a limited degree in Canada and Europe to reach domestic audiences. The need still exists in places but not to the degree that it did 20 years ago. If I am correct, the CBC Northern Service no longer exists on shortwave. Three or four Canadian commercial stations still use shortwave relays on 49 meters, but I honestly don't know if it's viable for their originating stations to keep doing this.

Maybe he was thinking XERK, Juarez(X ROCK 80) on 800 kHz? that 250KW
blowtorch DID have studios in Texas...and would ship the tapes across
the border to the xmit site for a while (I think it was an hour behind
on the air?) THEN they finally got FCC/Mexican permission to put
a STL shot across the border and go live from Texas...
I understand it too is under a government arm now...I hated it when
they quit playing American style Top40 music in the 80s...Damn
they sounded good!

I used to work at KAYC (now KAYD-AM) it was 1KW in Beaumont TX..
was Top 40 back most of its life until the late 70s or early 80s
when it became big band then country....then its FM (KAYD) which went
from AOR to Top40 in the 70s..I signed it off as a AOR station and
jocked on both KAYC and KAYD as a Top40 jock...then went disco..
then went country...was once owned by Charlie Pride...
I think the KAYC call is now somewhere in MO.

> 38 KWIC FM 108 Rock =E2=80=98N Stereo
Ahhh another one in Beaumont, TX....Now 107.9 KXTJ trying
to serve Houston under El Dorado...KWIC was once owned by the former
Gov, Mark White and then Ross Perot's group which lent the money to
White when he bought it...then filed for bankruptcy..its on the 2000
ft Devers tower now owned by Clear Channel...though El Dorado owns
it (I helped build the current 107.9 studios and even signed it on
the air until its new callsign late one night when we tested the
xmitr and remote control)

I'd like to see NPR, and Pacifica too, for that matter, on shortwave,
not because I'm a big fan of their political viewpoints, but just to
balance out some of the other stuff on domestic US shortwave stations...

As far as taking away from local station listenership? heck, they still have
"internet radio" streams from some of their stations, right? A shortwave
relay is probably less of a threat than a Real Audio stream...

How about the proposed in-band digital radio on AM. Would that
work on shortwave?

There are already receivers that are preprogrammed to pick up certain
stations (BBC, VOA,etc.) What remains is a way to download
schedule/frequency channges into the radio, with minimal user involvement.

And they are allowed to interfer with skip as such...but not
local stations.....Gee thanks FB for picking an empty freq
(but in the EXPANDED BAND??) Most people may not know or have
tuners that go that high..unless they have bought a new car or
tuner in the past 5-10 years....

BTW 103.3 FM will be carrying ESPN Sports when it returns to the air.
(Though I think their schedule of March or April is a bit too soon!
Lots to tower work to be done and the wx may not cooperate)..

And since Brumley spilled the rumor, all I can say is a lot of folks
are waiting to see if its true...

There is a lively discussion of CD recording levels and broadcast chain processing over on rec.audio.pro (assumine you are referring to music program content, not talk.)

Broadcast (as well as recording studio) audio processors are discussed, and there are several VERY expert regular contributors including Robert Orban himself.

Discussions like these always take me back about 40 years when I first began dxing the am band in Queens, NY where I once lived. My interest in am dxing turned into SWLing (shortwave listening) and then to acquiring a ham radio license. Recent auto trips to Detroit and southwest Georgia gave me the opportunity to dx the am band again, and yes parts of the way during both trips I stayed tuned to 880 WCBS. Wireless communication is, indeed, still fascinating.

There is a gospel music station out of Joliet, IL (WWHN) but I know they power-off at sunset... I can get WLAC fairly well, with minimal interference nightly, in the Kankakee, IL area.

I don't think it's Boston that's killing WLAC in Indiana, but something is clobbering them here at night.. Especially 1-2 hours after sunset.
It doesn't look like there are any daytimers on 1510 with low-power night time coverage in the eastern US, so it can't be one of the class D's who fail to drop to micro power at sunset. Might be one of the other Class B's on 1510. Speaking of that, why are there so many class B's with night time coverage on a US Clear? Also, after looking at WLAC's night time pattern, why the (subtle) null to the south (Gulf of Mexico). Is it to keep from wasting all of that RF over the Gulf or is there another reason.

>>

Yes, that's the main reason, but if you look at the depth of the minima, you'll find that it's about equal to the pattern RMS.

As such, WLAC sends at least 50 kW in every direction except towards KGA (about 1 kW) and WNRB (about 2 kW).

Since the array is three towers and is asymmetric, the pattern is asymmetric, which is what is needed to have the nulls filled to different depths.

That's what they found at our station. Our SW repeater was taken off
the air several years ago because of the cost. Too bad; the service
dated back to around 1930 or so.

409. Radio Caroline

Newsgroup: rec.radio.broadcasting
Date: 2001-01-21 16:26:48 UTC
From: Mike Terry <michael.terry1@virgin.net>
Message-ID: <t6m3e8df0asu5c@corp.supernews.com>
Source record: 16020
Cross-posted to: alt.radio.international,alt.radio.uk,alt.satellite.radio.europe,rec.radio.broadcasting,uk.media.radio.bbc-r2,uk.radio

It's available on the web (http://www.radiocaroline.de,
http://www.radio-caroline.nl or
http://www.radiocaroline.co.uk), or in Europe on the Astra 1C analogue
satellite behind
Challenge TV/TV Travel Shop (10.994GHz, horizontal, subcarriers at 7.38 and
7.56MHz).

Many of us have listened to this station since 1964!

I quote Ronan O'Rahilly - Founder of Radio Caroline from
http://www.radiocaroline.co.uk/ :

"Caroline was conceived to break the UK radio monopoly and help young
artists and bands advance their careers. When I saw the sometimes brutal
lengths that the establishment and authorities were prepared to go to to
silence Caroline, the station evolved to become a struggle of the individual
or group of individuals against the system and this continues to be so.

It is amazing and sad that not once in 33 years has anyone in authority come
to me to say 'hey, you guys are not so bad, why don't we talk this over'.

At some point Caroline took on a life force of its own, twenty years ago I
told a journalist that I don't run Caroline, Caroline runs me. This links in
with my views on Loving Awareness which I will just describe as a nice way
for people to live and to treat each other.

Another thing that made me sad was when someone very close to me said that I
had wasted my life on Caroline. I don't think that creating something that
has provided harmless free enjoyment for millions of people for three
decades could really be described as a waste. It probably represents the
most useful way I could have spent my life.

Caroline is like a big family and anyone can join. If this website inspires
you I hope you will join us and help return the Old Lady to the prominence
she deserves. Many people have laughed at me over my Loving Awareness
ideals, but that's OK. The fact that Caroline still survives at all, and is
seemingly indestructible, proves to my satisfaction that L.A. exists."

I was not specifically referring to the US. Most of my statistical knowledge of the lack of impact of SW comes form looking at ratings forms in Latin America, in fact. Americans have never thought too much of SW except as a hobby, rather than a regular news source.
>

SW in Latin America started falling off in the 60's. I surrendered a license in about 1968 in South America when I looked at the ratings forms for every metro in the country and found practically no out of market domestic SW listening and no international shortwave listening at all on well over 100,000 interviews. The only place where some SW continued for a time was in rural areas and as a trophy posession for heritage AM stations.

I don't recall more than 3 or 4 commercial stations on SW back in the 60's in Canada. And they were very low power.

To listen to Digital Radio, listeners are required to purchase new receiving sets. When these sets were launched to the public in 1998, the cost was in excess of £800, and mainly car units - which required separate boot mounted boxes and new aerials. Now the costs have fallen to around £300 - £500, as manufacturers launch new cheaper products.

However I have yet to find a radio that is cheap and highly recommended.

Suggestions would be very welcome, thank you.

I have the CKWX QSL card (I heard them in Los Angeles back in 1981). On the back it
mentions a shortwave station (CKFX, 6080 kHz, 10 Watts). Never heard it over the
roar of 49-meters, though....

I think a lot of this rural service radio is dying, all over the world (not only in Canada, but
in Central America, and even parts of Africa). Part of the reason could be that people
are starting to move away from the countryside and into the cities...there, AM/FM is
available and shortwave is not so critical anymore.

Armchair spectrum management is like any other form of armchair quarterbacking. If we don't list the guiding factors systematically, we're really just mouthing off. As with all real estate management the game is to try to match the characteristics of the terrain to the best and highest uses.

Here's what comes instantly to mind for shortwave:

Travels very long distances
Fades in and out
Relatively low fidelity in analog modulation
No line-of-sight required
Excellent against bad weather and electrical interference
Frequencies deliver very differently depending on time of day and time of year
Receivers traditionally expensive to buy and difficult to tune, no longer necessarily so
Approximate form and power requirements for decent reception of present signal: cigarette pack, two AA batteries.
Frequencies allocated through international agreement; commercial use traditionally limited by law.

Anything crucial I've missed or misstated?

Armchair assessment: Still potentially an enormously valuable medium. It lendsitself to some digitization, but the information transmitted digitally should probably be cyclical and low bandwidth. That suggests digital delivery of time, weather, headlines, stocks, web pages, frequency information, schedules. But not music. IBOC potential doubtful, as I believe it also is for AM. Chicken and egg issues for a global clean break standards change, insurmountable.

Thus the medium should remain analog as to audio content, but add low-bandwidth digital delivery of schedule and frequency information for smart receivers. Thus full backward compatibility, new suitability for casual use, perhaps even in a motor vehicle. Shortwave's highest potential is as a "second choice" delivery system, perhaps a free way to hear premium subscription radio, one whose low-fi and inherent limits draw people to, rather than from, the premium medium.

I'd never suggest that the occasional brokered time shortwave crackpot doesn't sometimes have something interesting to say. But it's much better said on the web. Reliable production values and reliable schedules are a must; tight formats are not. We're thinking NPR/PRI/Pacifica but in today's political environment shortwave is more likely to go CNBC.

Shortwave frequencies are used for digital delivery all the time, judging from the noises one hears. Is it bidirectional, point-to-point? Does anybody know the achievable bitrates or why fading isn't a eal-killer?

KLNO is doing very well. I will point out again though that there are about a dozen spanish language frequencies in this market. The total audience for these stations is just under a 7 share. This is an improvement from the 5-6 shares they had been getting before KLNO signed on the air. However, KLNO is getting at least half the spanish language audience. The next best spanish language station gets just over a 1. How long before some of these stations start doing something else?

Also.. KBFB's 3.5 number is remarkable.
They've done very little promotion other than a modest billboard campaign.
Clearly, they're keeping large numbers of people who stopped by to sample them.

Ron Chapman's ability to pump up KLUV is amazing. He's been doing this for more than 30 years and is still clearly one of the best in the business.

Well, unless you're listening at the top or bottom of the hour, it'd
be difficult to QSL 'WX now. We aren't allowed to use the call-letters
any more, even when answering the phone, and they're only on the recorded
IDs at those slots. Of course, when you hear the Canadian news and if
you have some kind of guide, that'll tip you off.

The SW tx was owned originally by a church; a couple of churches here
had SWs about 1930; it might have been earlier, I can't remember off-
hand. I imagine the original purpose had nothing to do with reaching the
rural population, but simply to have a signal of its own. All the stations
in town were sharing two frequencies back then. The SW stations had a
frequency to themselves.

Rogers now owns all the AMs in the Fraser Valley and into the Fraser
Canyon, and is in the process of converting them all to FM. The same
thing has happened to some AMs on Vancouver Island.

Jim, CKWX Vancouver

I was saddened to receive a note from a friend tonight of B R Bradbury's death, being reported by Don Barrett at

http://www.laradio.com

It was my great pleasure to work with and learn from B R when we he hired me at KPOL AM & FM (later KPOL/KZLA) in the mid 70s.

He was not only an excellent air talent and a consummate newsman, he was a great administrator as news director. There were five of us in the news department on-air, with news assistants, and two wire services, and a staff of CHP off-duty dispatchers to write the traffic, and even real live news vehicles.

The place ran as smoothly as a swiss watch, and when he left, he took all the energy in that newsroom with him.

Los Angeles was lucky to have B R. He brought a lot of joy to a lot of people every morning for two decades. He joins Jim LaFawn, who together with B R, developed News Roulette on KZLA. LaFawn suddenly dropped dead in 1980 while program director at KZLA.

I never liked to write sports. B R knew that, so he always made me write the first sportscast. It was 25 years ago, but even now I remember the question, "Trowbridge, why don't the Cubs play night games at home?"

Rest in peace, B R.

IBOC is an institutional preservation scheme. The digital future belongs to media whose delivery is bit-perfect. In the unlikely event that that ever includes shortwave, the quirky individualists of that medium will be bought out or crowded out anyway. The best will find their voice on web radio and subscription radio.

I'm aware of DRM and wish it well; I'll bet it sounds incredible in the lab. But I've listed the factors that draw me to the gut conclusion that the IBOC rock won't roll, except on FM. Still have a question open as to present digital uses of the shortwave bands; these should provide some evidence about the technical viability of digital broadcast shortwave.

Nothing good in this world emerges without dreamers. It gives me no special pleasure to remind you of the stepladder you're trying to climb, from technical viability to institutional commitment to public acceptance, then to commercial viability, then to this dreamworld of commercial success without commercial pressure.

That's because there are no cheap ones. £300 Videologic is as 'cheap' as you will find them. I got one over the weekend. Must admit the sound quality is excellent, even for a hi-fi novice like m'self listening on relatively low level equipment. The transmitted text is a good feature which gives Digital Radio the edge.

Only minus points, apart from the price, are that lots of the digital-only stations are just automated 24hrs, but then I suppose it is going to take a big rise in receiver ownership and hence listening figures to justify real output from these guys.

>>
> That's XEROK (ex-XELO). 150 kW.

Which is reported to be running 50 kw or less at the moment.
>>

Seems several of the old Border Blasters have been running at less than "notified" power.

XEROK/800 (ex-XELO) "notified" at 150 kW, now believed to be running at 50 kW (or less).

XERF/1570 (ex-XERA, exx-XER) "notified" at 250 kW, ran with 50 kW for decades, has been running at 10 kW for about a decade.

XEDM/1580 formerly "notified" at 100 kW days, 50 kW nights, now believed to be operating 50 kW.

I wonder what XEG/1050 is curently running. It is "notified" at 150 kW.

428. WHAT COLLEGE STUDENTS THINK OF RADIO

Hi all. I've finally worn out 20-odd year old cassette copies of the complete series of "crusin" albums. These were the recreations of various radio personalities shows from 1955 thru '67--i.e. Robin Seymore Detroit '56, Dick Biondy WKBW 1960, B. Mitchell Reed WMCA New York from '63 and so on. My guess is these were never on c d at all?? Or, if there are any out there, would someone make copies for provided tapes?? Thanks much.

When replying to this message, please avoid requoting my original where possible, or please place your new note above all my text. Thanks.
Private email would probably be best anyway. Thanks in advance.

As one of the first media persons to call Art asking about his return, I can tell you this: his passion for radio was never dimmed; nor was his quest for putting on a quality show during the night time. Art's direction during night time changes .... often during the show. He's the first to tell you the show is for entertainment only ... and it is that: entertaining.

Guests? Art didn't mention any when I spoke with him ... he was happy that his wife, Ramona, was getting to build an FM station in Pahrump, Nevada .... the station will serve the growing community and, I'm told, will focus on the big water valley. [Other stations licensed to Pahrump tend to shift focus to Lost Wages.]

My guess is these were never on c d at all??"

They were released on CD in 1986-88, right after CD players became popular. CDNOW shows all but the 1969 volume, and Amazon.com lists all as being available except the 1959 and 1966 volumes. One problem is that some of the songs have either been changed or deleted entirely, apparently due to clearance problems. ("Denise" by Randy & The Rainbows had the DJ talking over both the beginning and end, so it was scoped out while leaving the DJ chatter intact.) If you get lucky and find good copies of the original LPs (which were re-released several times) you may be better off in some cases.

There was an amusing incident in the late 1970s concerning the Cruisin' series; CFCF in Montreal played the 1966 album, featuring Pat O'Day from KJR in Seattle, one day and simulcast it on its shortwave station (CFCX) beamed to the northern provinces. Some DXers tuned in in the middle, heard the show without explanation, and word started circulating that CFCX had been heard simulcasting KJR! Joe Donovan at WHAS in Louisville also used to play sides from the Crusin' series on his overnight oldies show in the 1970s, usually at the end of the last hour. (He had to stop doing it on his Saturday evening show because he got too many calls from people wondering why they were hearing another station -- one of which was from me, in 1977 IIRC.)

I found a Web page at http://www.geocities.com/SunsetStrip/Studio/9285/r-cruisin.htm that lists all of the Cruisin' CDs and indicates which DJ from which station was featured for each year.

Source record: 16050

WWHN blasts in all over Indiana, OH and other places around and after sunset. I think they have post-sunset authorization to operate until 6pm CT/7pm ET, thus blowing WLAC out of the water. I seem to remember on Saturday night a couple of years ago when I heard a station, very loud, with a secular soul format running well past 7p eastern and clobbering WLAC. Be real interested to find out if that was WWHN relaying another station or something else entirely. The Boston station (WNRB) on 1510 seems to get out over water pretty well. I saw several issues of a British DX magazine, and there were loggings of WNRB in about every one of them.

My 550 mystery was back last night (last 2 Monday mornings around 3am Eastern, under WKRC, with religious music (soft, female vocalist). Anyone know of a 550 that normally switches pattern/power but is full power, day pattern for engineering tests (or employs a Sunday nite operator who "forgets"--I've heard WDUN Gainesville GA several times at night on day pattern when they shouldn't have been)...and a signal that would get into Southern OH? Obviously not KTRS. Harrisonburg?

Bit-perfect means the databits you receive match perfectly the bits I send.
MP3 is bit-perfect, it has nothing to do with compression. FM isn't and can't
be, it's analog and not digital. Everyone in this group is in awe of the
fault-tolerance of analog systems, where static causes annoyance rather than
fatal disruption.

> In your world success is reserved for parties that already have a
> success (a frequency).

Not so, in my world artificial scarcity of mass communications bandwidth is
in the twilight of its era. Audio content providers cheaply span the globe.
Your audience reach is limited by your talent and your ability to publicize, not
by the laws of physics, economics or politics. But we don't get to limit this
new power of mass communication just to ourselves. You're trying to combine
today's limitless digital reach and listener choices with yesterday's mass
captive audiences, and it just won't be happening. On balance, today's system
of limitless choices wins hands down, for audiences and innovative content
creators alike.

It is radio, right? For all you know, they could've just played an audio recording. (There is a Michael Moore movie with footage of just such a scene - wouldn't be hard to take the audio from that. Truth be told, I don't think the audio alone of that scene would be all that shocking - you really need the video for the full effect, such as it is...)

Moreover, it would seem the promotional stunt worked. They got you to mention the stunt - complete with the station's call letters! - on this newsgroup. Such free publicity is no doubt exactly what they were looking for.

And, for better or worse, that *is* what pythons eat. Happens every day.

I have been empowered to liquidate radio studio equipment owned by a failed dot-com. The equipment has less than 300 hours on it. A list of the items available and the selling prices are available at http://www.sdars.net/studio.htm which some readers have seen before, but there's now a more interesting wrinkle to this scenario: we're now accepting offers for individual pieces, or if one buyer is interested in the whole shebang, there's an unheard-of price for everything... the total asking price of the individual pieces is $16,168.60. There's a buyer-take-all price of $10,000.00 for everything! The list prices of this equipment is over $35,000.00! Contact skyline@sdars.net for further information.

Man, wouldn't it be great if Imus moved to WJR too. An easy signal
to receive in Central Ohio; WXYT requires a 4 tower phased array,
and that's only good in the day when there are only two local
stations to cancel.

I suppose WJR has a tradition of morning hosts of their own though.
Even so Dr Laura I think takes over at 9, intead of the 10 that
JP went to, so the tradition is eroding. And Rush would be in
the Focus spot. What the hell, go all the way.

I suppose you have to ask, first, what Pythons regularly eat. If live rabbits are served them daily at zoos, hiding this fact dies not make it go away. And I'm sure you are aware that some animals will not eat a "prekilled" animal and must have live prey?

Reality is often in poor taste if your choice is to hide from reality.

While driving home on I-78 here in central New Jersey I scan the AM dial looking for something good to listen to. I have been surprised lately to hear distant stations coming in loud and clear. I have heard stations in Washington, D.C., Baltimore, Wheeling, Cincinnati, Cleveland, Buffalo, Rochester, Montreal, and Boston with regularity.
This is truly unusual reception.

454. Deirdre O'Donoghue Found Dead

Newsgroup: rec.radio.broadcasting
Date: 2001-01-24 17:08:46 UTC
From: David Tanny <davidtan@cts.com>
Message-ID: <t6u30ueb26lg63@corp.supernews.com>
Source record: 16065

From Don Barrett's laradio.com website:

Deirdre O'Donoghue, Host of Breakfast with the Beatles, Found Dead

(January 23, 2001) Deirdre O'Donoghue, longtime host of "Breakfast With The Beatles" on KLSX and "Snap" on KCRW, was found dead in her apartment yesterday morning. It is thought that she died Friday or Saturday. Details on her death are sketchy.

Born in 1948, Deirdre started her radio career in 1974 at WBCN-Boston, a station that she maintained was "the best radio station in the world."

Beginning in 1983, Deirdre was heard on two FM stations - non-commercial KCRW and KMET. She was with KMET until 1987 when the station changed format and call letters. Her show "Snap" (acronym of "Saturday Night Avant Pop") on KCRW aired three nights a week with anything considered on the cutting edge of contemporary Pop music. She started at KKGO in 1979 and went on to work for KCRW, KMET, KNX/FM and KLSX.

Deirdre also hosted "Snap Judgments", a Sunday 2-hour new alternative music show on 91X in San Diego for a few years in the early 1990s.

Greetings,

Mike Terry <michael.terry1@virgin.net> wrote:
> Sorry, I am not complaining. I will revisit the site.

I don't know if there is a 'forum' for DRM, but I do have a question concerning it.
The specs (as found on the website) indicate the use of AAC and SBR as choice of audio-codec.
Does the DRM-specifications -as they will be proposed to the ITU-R- allow other codec's to be used?

I ask this as at-least one of these codecs (AAC) is patented (I don't know about SBR); while there already are patentfree audio codecs available. (like vorbis/ogg).

As DRM is a technology that will be used all-over the world, (also in the 'developing countries') using a patentless codec could help keep the prices down.
Or, allowing the possibility for other codecs would help put a 'cap' on the extracost the patentholder asks per receiver.

PS. I do admit that vorbis/ogg -at this time- is mainly focussed at bitrates of 128 Kbps and higher; there already is work being done on lower bitrate-encoding scemes.
And, on the internet, software-developement do can go very fast!

Cheerio! Kr. Bonne.

This makes sense for WJR, especially since the wheels are supposed to be coming off the Dr. Laura Express. What is WJR doing with her show, shipping it to nights/overnights? (I honestly can't even remember what they run overnights now, though I think it may be the Truckin' Bozo show.)

Quite the contrary...it's truly USUAL reception, at least assuming you're hearing things like WTOP 1500 Washington, WBAL 1090 Baltimore, WWVA 1170 Wheeling, WLW 700 Cincinnati, etc.

Check out http://www.nrcdxas.org to learn much more about all the fun that DX can be.

It is Gospel/Soul that I'm hearing over WLAC. Starts about 4:30
central and goes for I dont know how late. Last night in the car I was
gettting a lot of splatter from 1500. There was a station there much
stronger than LAC! Didn't catch the location but it was a W call.

The Official Old-Time Radio (OTR) FAQ
Frequently Asked Questions (FAQ) File
for OTR
(Old-Time Radio)

Last Modified: Tuesday, October 17, 2000

---------------------------------------------------------------------
Copies of this FAQ are distributed quarterly to rec.answers,
rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and
other news groups; and are on file at bloom-picayune.mit.edu in the
file: /pub/usenet-by-group/news.answers/radio/old-time-faq. A recent
text version can usually be found at
http://www.old-time.com/ffiles/otr.faq The most recent HTML-ized
version is at http://www.old-time.com/otrfaq.html

---------------------------------------------------------------------
Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster
response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR
programming?
Q11. I have some old transcriptions and tapes, how can I make them
sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or
themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
```

Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival

Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html/

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

A comparative price chart, listing many vendors, is available at the www.old-time.com site.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station

rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

Just to get a little perspective in this
controversy, copyrights do expire. Under the old
copyright law, a copyright was good for 28 years
from the date of first publication, renewable for
another 28 years, for a total of 56. Under the 1976
act, those copyrights were extended to 75 years,
provided they were renewed. Copyrights under the new
law, which took effect on 1 January 1978, are good
for the life of the author plus 50 years. Copyrights
on anonymous works, works made for hire, etc. are
good for 75 years after first publication.

So, since otr has just barely been around for 75
years, little or none of it is in the public domain
yet by reason of having been around for a long time.
The question of what constitutes publication, and
the fact that sound recordings could not be
independently copyrighted until the new law took
effect add additional complications.

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

The days of radio being ruled by the artisans is over, and
for some time now it has been in the hands of people who
only look at the bottom line, so to reach them you must
talk through public radio pledges, or through sponsors

on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.btinternet.com/~amfish/index.htm

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog)

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

David Hassell maintains a growing selection of program summaries at
http://members.aol.com/DavidLHsl/otr/otrlist.html

Also check Frank Passage's logs at the old-time WWW site; most
contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only
the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational
libraries with this material.

Q16. Is there a World Wide Web page (URL) that I can access for more
information?

A16. Yes, there are several WWW sites. Each site contains different
information, so you might want to visit them all. The major OTR WWW
sites all have links or pointers to each other, so you can explore
many topical areas within old time radio. Good places to start
exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

A fairly lengthy list of WWW sites with some kind of OTR affiliation
is maintained at www.pe.net/~rnovak/jack.htm

An excellent database of OTR-related WWW sites, with an explanation
of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. At least two email newsletters currently exist.

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very
popular and freely available electronic newsletter, delivered
nightly. Its purpose is to foster general discussions about the hobby
of collecting, preserving and listening to OTR. To subscribe, send an
email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

A general discussion list, "OldRadio", is maintained by a long-time
OTR fan, participant in many OTR conventions, and internet guru,
promises spam-free editions with good "flame" and off-topic
prevention, as well as articles by guest experts. To subscribe, send
email

To: oldradio-request@oldradio.net
Subject: Subscribe

(The body of the message is ignored)

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment division at
1-800-622-0022 or call Radio World magazine at
703-998-7600 for subscription information. Radio World is
an industry trade and has used equipment listings in the
classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: vintage@infohouse.com (Andy Blatt)

I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..

It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.

The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.

There is no difference in audio quality using either six hour or two hour mode.

It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)

Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.

I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression

seems to be more favored than is RealAudio(R) compression.

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]

Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air. The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in

practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:

Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes

(dan@soltec.net) left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical
articles related thereto, send a SASE to the following address for
their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern
drama. Check the lists on your local Internet provider to see which
are available to you. Here is a list of some of the WWW pages for
radio drama (more may be found at http://www.old-time.com):

Atlanta Radio Theatre Company: www.artc.org
ZBS Media http://www.zbs.org/zbs.html
LodesTone Productions
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop http://www.mrtw.org/mrtw

Q24. I have only email access to the Net. Can I still get the files
at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following
file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail
servers.
To get the latest edition, send e-mail to one of the addresses
below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

TO: mail-server@rtfm.mit.edu
SUBJECT: [blank]
BODY:
help
end

I have also initiated a simplistic file server. At present, it can handle only a few files. If you have ONLY email access to the Internet, and want more information on what is available by email, send an email in EXACTLY this format:

To: files@old-time.com
Subject: send help.otr

do NOT put anything in the body of the message (it won't be read)

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at
www.otrsite.com/ra/preview.html

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

You almost need to buy cassette albums from
specialty suppliers. Radio Shack used to carry a
small line of these and charged too much. We are in
the recording studio business, and receive catalogs

from several sources. The one I like best has
some of the lowest prices and unhesitatingly deals
with individuals and will take your credit card
number over the phone for instant shipment (in
contrast to some who require account setup, purchase
orders, prepayment, cash and other nuisances).

They have two catalogs: one for audio and one for
video. Cassette albums are available in a large
number of different styles, sizes and capacities.
The 8-cassette albums I use are CPCN.4+4M/WHT in
white and CPCN.4+4M/RBLU in royal blue. Outside
dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit
well on a bookshelf. This model also seems to cost
less per cassette than any of the other models,
though logic might lead you to the conclusion that
the larger capacity ones would cost less.
[Polyline has a website at www.polylinecorp.com, and their new
address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

Q27. All this new software is a bit difficult for me to use, as I am
blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or
Microsoft Explorer, most pages render well with LYNX and associated
reader software.

Blind visitors who depend on DOS-based software to access the net, or
who use a reading program to audibly display their computer's output
might be interested in a program called "Nettamer". The Nettamer home
page is at www.nettamer.net/

Q28. I am interested in re-creating some OTR drama. Where can I get
scripts?

A28. Check your local or national OTR clubs. Many have a "print
library" that includes scripts. You can also point your browser at
the University of Maryland's script page, at
www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

One excellent source is the book. "One Hundred Non-Royalty
Radio Plays" compiled by William Kozlenko, Greenberg Publ of
NYC 1941. It's certainly out of print now, but many libraries
would have a copy. I bought mine at a used book store a few
years ago. The 100 radio plays in the book include adventure,

mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at web2.airmail.net/lgroebe/

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.deja.com to sample some of the messages.

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)
* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at www.lofcom.com

---

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can

contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material. Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.

Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles

Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at: http://welcome.to/reps

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

I wouldn't be surprised if one of the 1500 statioins you heard the other night was either WTOP from DC or WLQV from Detroit MI which used to be WJBK.

Sense the one you heard was a W then those are the only 2 W stations in that frequency area or I would have mentioned KSTP from Miniapolis. here in Kaloamazoo I've heard all of those 1500 stations but I've never had problems hearing WLAC at all.

O by the way was it 4:30 AM or 4:30 PM when you heard the gospel stuff on 1510?

I installed (twice, as we moved the station and then moved it again) a
Harris HT-20.
This transmitter is beautiful - no suprises, tunes very smoothly, easily put
out over
25 kilowatts during testing. I like it. For used, I am comfortable with
the Gates/Harris
FM20H or FM20K. I'm not as fond of the FM-25K, although I installed a used
one
successfully here in Albuquerque. Regards, Don Davis

I'd similarly find some fault with staging the event. However, if they simply broadcast a zoo's or a collector's regular dining session, there is something to be said for the possibilities. Why, it could even have been a commentary on animal rights activities, demonstrating the "savagery" of nature! Or, it could have been a gross-out. Or both.

>documentary and a Wild 107.683 gross-out?

Yes. But it's precisely that difference that makes me think that the
radio station's "stunt" was a fake.

In real life, there's almost nothing to hear, audio-wise, when a python
devours a rabbit. At most, you might get a *very* brief squeal from
the rabbit. That's all. Otherwise, it's completely silent. Not exactly
the stuff of which compelling radio is made. The video is far more
disturbing, as anyone who's seen Michael Moore's movie knows. But radio
has no video.

I suspect the station may have thrown together some sound effects to
make it sound like there was some sort of big life-or-death struggle.
But that's not how it works in real life. The rabbit doesn't stand
a chance. One short squeal - nothing more.

Complaining about certain stations doing "gross-out" stunts is like
complaining about the Pope being Catholic. Complaining and mentioning
the station's call letters at the same time just gives them the free
publicity they were looking for in the first place. The more outrageous
the stunt and the more outraged the complaints - especially if they
appear in the newspapers or on the TV news - the better it is for the
station, and the more they'll keep doing it.

>and the guest will be someone who has and a close encounter of a
>magnitude greater than "two".

He might be better off doing a show about how to get out of the gold market, and how to get your bank to reverse the ATM charges you ran up when you withdrew $15,000 of your life savings in advance of the witching hour $500 at a time.

What to do with all those damn canned goods, .45 rounds and bottles of water might be worth at least a week.

I've never been fond of Bell, because he came from this "what the government won't tell you" mindset, and because my mental view is of this guy sitting in a trailer out in Pahrum. It reminds me too much of Max Headroom and the guys that uplinked guerilla video out of a grungy panel truck.

He's got a lot of crow to eat too.

But maybe in all his oooga booga he's caught the drift that milleniumism is just coming a little late this century. We're starting to be more spiritual, and we appear to be on the verge of a number of breakthroughs in our understanding of how humans interpret time and space.

Maybe its time for old Herb Jepko to come back in the form of a mellowed, cowed Art Bell. He could sit up close to the mike, and spend a lot of time talking with people just about general pleasantries.

Then he could talk about out of body experiences & soul travel, he could dialogue with adherents to what, in the 1980s, we might have run from as cults.

Every nightly show could be an experiment in contacting outer space; not the way Art Bell used to do it, which was the 90s version of the 1930s Mutual attempt to bounce radio signals off the moon; but through mental powers.

Art keeps surprising us. Wouldn't be a pleasant surprise if he came back with something more than doomsaying voices in the night.

I'm from Portugal and I work in a news radio and I spend a lot of time on the internet. I'm a radio freak and I've listened to some american radio stations on the web. I've been thinking about a cool hobby: jingle collecting.

I've made my searches and I already got few, for exemple from Z100-New York, a few from dutch radio stations.
My main interest is american radio station jingles and commercials, those like only America does. I don't ask for demos.

If anyone here is a radio owner and doesn't mind to share with me it's proudly produced jingles and commercials?
I ask you if you send them, please send them in Mp3@128khz format. Although they're not for re-broadcast (of course) Id'like to get them with "broadcast quality".

I'm also thinking about making a website with radio jingles. Like me there must be lots of people with the same hobby. All the web pages that I've found until now don't impress me much. Of course I'll have to ask for permission to put the jingles on that eventual future website.

Thanks for your help!

Hmm. I'm going to go out on a limb here and suggest it was intended as
a gross out. Educating an audience on the wonders of nature doesn't
seem to be a trend on morning shows.

I'd like to see one basic rule when doing things that cause animals to
scream in pain. They must be your own pets. I wonder if it would have
been done if the rabbit was one of the hosts' kids' pet.

501. DRM

Newsgroup: rec.radio.broadcasting
Date: 2001-01-26 21:32:49 UTC
From: Mike Terry <michael.terry1@virgin.net>
Message-ID: <t73r81pdhonuc2@corp.supernews.com>
Source record: 15962
Cross-posted to:
alt.radio.international,alt.satellite.radio.europe,rec.radio.broadcasting,rec.radio.shortwave,uk.media.radio.misc,uk.radio

From: http://www.rnw.nl/realradio/features/html/digital010117.html

Radio Netherlands engineer Jan-Peter Werkman recently returned from a field trip to Ecuador and Bonaire, together with Andy Giefer of BBC Research & Development. The purpose of the trip was to carry out a range of reception tests using the various modes of digital shortwave transmission developed by Digital Radio Mondiale (DRM). Radio Netherlands is playing a leading role in the DRM consortium. In the audio interview accompanying this article, Jan-Peter describes the work they did, and the purpose behind it.

The DRM system is set to revolutionise the shortwave listening experience. Instead of low quality AM transmissions with fading, distortion and co-channel interference, field tests have already proven that DRM offers remarkable reception quality over distances of up to 8000km. As Jan-Peter explains in the interview, the ultimate test will be the 24,000km long path circuit from Sveio (Norway) to New Zealand. Listen to the two sample MPEG files to hear the striking differences.

Transmitter: Pifo (Ecuador)

Receiver: Bonaire
17-December-2000
2200-2257 UTC
21455 kHz
Remark: very good analogue signal without fading.
Transmitter: Julich (Germany)

Receiver: Bonaire
20-December-2000
1500-1557 UTC
21635 kHz
Remark: First reception from Julich and longest distance tested up to now (7886 km). Fading and low SNR on analogue but not much problem on digital.

Up to now, much of the work being carried out by Digital Radio Mondiale has been 'behind closed doors'. This is necessary as the consortium involves not only broadcasters such as Radio Netherlands, but also commercial companies who have a stake in the development of digital shortwave broadcasting. Up to now, there has been very little definitive information to give to shortwave listeners, as the technical standards underpinning DRM have been in ongoing development. But the project has now reached the stage where we can explain, in general terms, what digital broadcasting is going to mean to the shortwave listener.

We invited Media Network readers to submit questions, and we would like to thank those who responded: Herm Kruse, Paul Ormandy, Daniel Say, Andreas Urbe and Fabrizio Magrone. Unfortunately, not all the questions we received can be answered immediately. Some relate to commercial information (e.g. availability of receivers) which is not yet known. Regulatory matters, such as the frequency allocations for DRM, are also beyond the scope of this feature, as they involve other bodies such as the International Telecommunication Union. Despite these limitations, the questions and answers will serve as the basis for a more detailed FAQ list which is in preparation. Questions which were submitted but not answered here will be referred to the appropriate committees or individuals at DRM.

> start doing something else?

Since the ownership of these stations seems to be companies that
specialize in Spanish radio, it seems like it will be a long wait. It
does seem like everyone would be better off if most of these stations
would go away, so that the market could have several healthy Spanish
language stations instead of a dozen barely surviving stations.

> Also.. KBFB's 3.5 number is remarkable.

It's also interesting to note that they seem to have pulled from both
Kiss and Hot 100, both of which took major hits. Their direct
competitor, Urban formatted K-104, seems to have taken a small hit, but
not enough to lose the #1 spot.

> Ron Chapman's ability to pump up KLUV is amazing. He's been doing this for
> more than 30 years and is still clearly one of the best in the business.

As I recall, it was Ron Chapman who pushed the move to KLUV, something
which Infinity was hesitant to do. I can't help but note that the
initial ratings seem to be vindicating his judgement very nicely, with
KLUV showing a huge leap, and KVIL showing a smaller decline. The
bottom line for Infinity is that the combined rating for both stations
is up.

There were also some interesting numbers further down, with Americana
rimshot KHYI 95.3 showing its best ratings yet -- something around a 0.7
as I recall. Not bad for a station that doesn't reach more than a
quarter of the market.

Paranormal Talk Radio

by Anita Louise McCormick

It's early morning, and Uri Geller switches on his microphone. "Please join me on a fascinating journey into the world of the unexplained, ESP, telepathy, UFOs, mind power, and much more," Geller invites his listeners. "If anything psychic, paranormal, or supernatural happened to you, call me now...."
So how did the man known around the world for bending spoons with the power of his mind get into talk radio?
For five years, Geller has been co-hosting Doug Stephan's nationally syndicated "Good Day Show" for an hour every Friday. "That one hour brought a tremendous response — every week, I receive thousands of e-mails and letters from listeners, and hits on my website, (www.uri-geller.com), — Geller said. —Doug felt it was time that I had a show of my own, and we spoke to the people at Talk America about it.—
Uri Geller's program, "ParaScience and Beyond" begins its run on the Talk America Radio Networks (http://www.talkamerica.com) on February 6, 2001. He has the 1 AM to 3 AM (Eastern time) slot Tuesday through Friday mornings.
Uri Geller does his program from his home near the Thames River in Berkshire, England. He appreciates the technology that allows him to sit in his conservatory and view the beautiful country landscape while he talks to listeners thousands of miles away.
"I really like the EuroNexus ISDN codec Comrex because I can do the program from home and it sounds like I'm in a professional radio studio," he said.
The unexplained is definitely attracting more public attention these days, according to Geller. "The success of movies like The 6th Sense, Phenomenon and The Matrix prove that people are interested in ESP, psychokinesis, and other aspects of the paranormal," Geller said. "Last year, R.E.M. even had a hit song with lyrics about bending spoons!"
Uri Geller recently visited the U.S. to promote his new book, "The ParaScience Pack." "Everywhere I went, people wanted to know more about mind power and the paranormal," he said. "My show provides an interesting outlet to explore those issues."

Coast to Coast AM

For years, Art Bell, host of Premiere Radio Network's "Coast to Coast AM" was the best-known host in paranormal talk radio. When he

retired several months ago, no one knew what would become of his popular late-night talk show. But Bell's successor, Mike Siegel, stayed with Bell's winning formula of discussing every kind of unexplained phenomena imaginable.

"There has been a great deal of attention paid by the media to UFOology," Siegel said. "Several films and many television programs have focused on the subject. It is a new attention to the age old question as to whether we have been visited."

Scientists who once feared being mocked for showing an interest in the paranormal are now stepping forward to present their theories. Former NASA scientist Richard Hoagland, physics professor Michio Kaku, and Apollo astronaut Dr. Edgar Mitchell have all been guests on &#65533;Coast to Coast AM&#65533;.

"Remote viewing, teleportation, hyperspace, wormholes, parallel universes, psychokinesis, and related areas have had a great deal more attention from scientists and researchers. This has led to more being written, more seminars being held, and more public awareness of these fields," said Siegel.

Art Bell recently announced that he will be returning to his show on February 5, so Coast to Coast AM fans can look forward to even more late nights of Bell&#65533;s in-depth interviews and discussions of the paranormal and the unexplained.

Who Listens?

While neither Arbitron nor Interep have survey data on paranormal talk show listenership, Jim Watkins, the producer of Talk Radio Network&#65533;s "Sightings,&#65533; has done his own study. "Sightings," hosted by Jeff Rense, has been in syndication since the mid 1990s. It is carried on 202 stations and focuses on other-than-mainstream topics, including the paranormal.

Armed with Arbitron data, e-mail response to the show and "Sightings" tapes sales figures, Watkins estimates about the demographics of Rense's audience.

"We probably have 40 or 50 thousand listeners per night. Jeff skews to the adult 25 to 54 age group, with a greater emphasis on 35-plus women, also showing well with 18 to 49 year old men. Listeners to talk radio usually have a higher than average income level, and have a higher than average education level. The (http://www.rense.com) website, where streaming audio of the program can be heard, has an estimated a four million "hits" a month."

"Jeff attracts people who on average, watch less than 20 hours a week of television, have specific interests in politics, sociology, science, religious/spiritual issues and foreign affairs," according to Watkins.

And what keeps people tuned in, according to Siegel?

"It is ironic today that our economic success has not been enough for most. People are still searching for deeper meaning and that is why we have such an increase in interest in the field.

Why do you say that? The FCC isn't allocating any new frequencies in Atlanta and to be a radio station in Anniston not making dime one isn't a worthwhile business pursuit. The station was replaced before 100.5 was moved to Atlanta.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Hi all.

Looking for info on Dick Sommers. I did a search on Yahoo but found nothing. He had a great late night radio program in the early 90's. He contacted me after I sent a post on this newsgroup and was kind enough to send me a tape of some shows he had. Well I've long since worn it out. Dick, if you're out there I need more! I'll even buy tapes from you! Last I heard him was in a spot for World at My Door.com.

WCBS still comes in loud & clear in the Chicago area almost every night even with "local" WLS right next door at 890.
I drive into Chicago every morning around local sunrise from the northern suburbs. East coast stations that come in at this time of year about 6:15 AM CST are WBBR 1130, WBAL 1090, KDKA 1020, WHAM 1180, & WTAM 1100.
In the fall, usually late October just before we change to standard time, I can occassionally get KFI & KNX from Los Angeles right around Chicago sunrise.

From: Jerry Trowbridge <jtlist@FlyingPigRanch.com>
Message-ID: <t75vvr6oft9j81@corp.supernews.com>
Source record: 15978

Most broadcasters, especially television GMs, wouldn't agree I'll bet,
but to my view as a citizen, WIlliam Kennard may be the best FCC
commissioner we have ever had.

We had someone here who really cared about the public, and about
resolving some very deep technological problems we've inherited from
nearly a hundred years of building things while we are learning them.
Much of the rest of the world had the ability to learn from us.

In 20 years, we'll look back and realize what a visionary he is, and
how much he accomplished.

Dan Rather does a show called "Dan Rather Reporting" which can be heard
on WCBS 880 in New York at 4:40PM (adjusting for commercials) weekdays.

I remember that, too. And not just anchors but TV correspondents anchoring the top of the hour news.

ABC Radio also did it.
I recall Sam Donaldson at one time doing some news on ABC's old American Information Radio Network.

CBS and ABC forced their TV people to anchor some hourlies on steam radio 15-20 years ago. They hated wasting their time and their blow-dry jobs and it finally faded away. I was n.d. of an NBC o&o at the time and NBC tried desperately to get its TV stars to do the same kind of cross-promotion. It was a subject of much discussion but v. little action, as I recall.

> I seem to recall this being on Sundays??? Am I crazy???

Every now and then, if there's a "major" story breaking, CBS/Westwood/Infinity will have the CBS Radio hourly news hosted by someone like Dan Rather. He might just do the "headline" story itself (sometimes even on-the-scene), but then the remainder of the newscast will be anchored by a CBS/Westwood/Infinity radio person from NYC.

I do remember in the 1970's, Dan Rather, Ed Bradley, Morley Safer, and Mike Wallace, would frequently anchor the hourly CBS Radio newscasts on Sunday afternoons, probably because they were around at 524 West 57th, to do their segments on 60-Minutes for CBS Television later on in the evening.

Also, George Herman would do some hourly CBS Radio newscasts early on Sunday afternoons back then, from CBS in DC. He was the moderator back in the 1970's for "Face the Nation". The TV feed was usually LIVE from 11:30-11:59am (Eastern) on Sundays, but then a slightly modified audio version of "Face the Nation" would feed over the CBS RAD))|((O NETWORK from 12:30-12:59 (Eastern) Sunday afternoon. The IBM commercials were on the CBS-TV version of "Face the Nation". The CBS Radio audio version would have George Herman doing a "mini-biography" of the guest during that first break early in the program, and the closing parts would have up to three minutes of PSAs where the longer IBM commercial aired on CBS-TV. Sometimes, the DC announcer would give a longer "promo" for CBS Radio leading up to the outcue. Right after the announcement "Face the Nation is a production of CBS News" (jingle for long form features now plays; sometimes a third PSA would air, sometimes the announcer comes back right away) "For the most in local, national and international news, listen to this station for CBS News, on the CBS Radio Network".

Around the early 1980's, the "mini-bio" at the beginning, and the two/three PSAs at the end were all replaced by sold commercial slots, five or six :60s total, for the 29-min CBS Radio feed of "Face the Nation".

There was also a 23-min feed of "Face the Nation" later Sunday afternoons on CBS Radio in the 1970's, where there were no promos/PSAs, and no mini-bio's from George Herman. It was just strictly the interview itself, with BRIEF open/close announcements, and the long-form features jingle at open/close. The announcer even

stated something like "This program was recorded earlier today in Washington DC, and was edited for time considerations. Face the Nation is a production of CBS News" (jingle) "This is the CBS Radio Network".

Some of the 1970's era CBS News anchors on CBS Radio hourly news included Stephani Shelton, Douglas Edwards, Charles Collingwood, Richard C. Hottelet, Bruce Morton, Robert Sheiffer (usually on Saturday afternoons, because he anchored the CBS-TV Saturday evening newscast in the 1970's), Reid Collins, Charles Osgood, Charles Kuralt, Morton Dean, Eric Severeid, Steve Young, Bernard Kalb, etc. Most of these CBS Radio hourly news anchors were also regularly seen on CBS TV news segments as well.

The anchors on ABC Radio and NBC Radio news in the 1970's did *NOT* usually seem to do segments on their TV networks newscasts, but the "voicers" or "reports" of individual stories were frequently ones who were seen on the TV side. However, ABC Radio did have Vic Radner and Joe Templeton in the 1970's to anchor the ABC-Inf. hourly news, and regularly do stories and I think they were also from the TV side.

NBC Radio used to have "Meet the Press", and there was a "long" version and a "short" version. There was also a DOUBLE-SPEED version (I think of the short-form), which on the network ran some 12-mins. The station was to tape it at double-speed, and play it back at half of that speed for approx 24-mins. I can remember WWIW-1450, the NBC Radio affil in New Orleans at the time would use that version of "Meet the Press". It sounded TERRIBLE, because of the way the higher frequencies would get lopped off in the double speed version feeding down a 5-Khz bandwidth audio line, when played back. The playback version sounded like a "telephone call" 3.0 Khz bandwidth quality! :(

ABC Radio (branded for the American Information Radio Network) would run an audio version of "Issues and Answers" which was renamed "This Week with David Brinkley".

You would frequently hear NBC TV or ABC TV news people on these programs, since they were mainly produced for the TV side.

The radio versions of "Face the Nation" and "Meet the Press" probably pre-date the TV versions, but if not, the radio and TV versions started at the same time in the 1940's or 50's. I've heard that Westwood/CBS still has "Face the Nation" for CBS Radio, but I don't know if they run "Meet the Press" for NBC Radio. I don't know what Disney/CapCities presently still runs "This Week" for ABC Radio. (Now that Brinkley has retired, what does ABC News call the program on ABC-TV anyway? Is it simply called "This Week"?)

But today, CBS Radio does not usually seem to have many CBS TV people do the anchoring of the hourly radio news, as much as they did in the 1970's. However, I think Christopher Glenn still anchors an hourly

CBS Radio newscast or two on weekdays, mid-mornings. Glenn used to do those "In the News" 5-min segments directed towards children, during Saturday morning cartoons on CBS-TV. I don't know if he does much on CBS-TV presently, though, but he did do hourly CBS Radio newscasts regularly in the 1970's *and* the CBS-TV Sat mornings "In the News".

Here's one to throw you when you're on a schedule...

Our local (Detroit) news radio, WWJ, has "Traffic and weather on the eights". Of course, stories sometimes run long. And so, while the rest of the world may be at 8:41 a.m., in WWJ land it is 8:38 a.m.

Or maybe it's the atomic clocks at WWV that are 3 minutes fast.

Let's do the time warp again!

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

I am not clear what the last point meant. The FCC can not allocate any more new signals in the Atlanta market so all we are left with is moving current broadcasters closer to Atlanta. We are the number 11 radio market and we got shortchanged on the FM dial so we need to grab stations wherever we can. Even when all the move-ins that have CP's happen we still are screwed because the number of prime signals has not changed in years. Q 100 at least has a tower downtown. I am tired of the complaining when a big city takes a small town station. If you want a lot of FM radio stations move to a big city. Of course small towns do not have many choices in a lot of things, that is the way it is. WHMA made good money but even a C3 in Atlanta will make more. There are numerous choices for country in Anniston and the surrounding area. Granted they are/or will lose 2 country signals (in part due to the WQSB downgrade) but life will be okay. Smalltowns do not deserve 100kw power houses unless it is so far away from a big city that it does not hurt the big city.

;Hi all.
;
;Looking for info on Dick Sommers. I did a search on Yahoo but found
;nothing. He had a great late night radio program in the early 90's.
;He contacted me after I sent a post on this newsgroup and was kind
;enough to send me a tape of some shows he had. Well I've long since
;worn it out. Dick, if you're out there I need more! I'll even buy tapes
;from you! Last I heard him was in a spot for World at My Door.com.
;
;Trent Sprenkle
;-- end of forwarded message --

The correct spelling of Dick's name is SUMMER. There is a note
up on the net saying he is doing commercials somewhere in
Pennsylvania. Try doing a search for DICK SUMMER and
you're more likely to find some information.

My husband was Dick's audio engineer way back on WNBC, but
we haven't heard from nor about Dick for years.

Years ago, I downloaded a program from Compu$erve that took data from the FCCs AM database and drew a graph of the theoretical signal pattern for any station.

Unfortunately, my HDD crashed b4 I backed it up, and I have not been able to find it since. Does anyone know of a similar program? It was a great way to find AMDX stations that peaked in your direction.

I don't understand why your pitching this here where
in this news group it is a hobby to chase faint DX.
People in this group like to fiddle with their radio's
and antenna's trying to make the unintelligible signals
understandable.

Even though I am a engineer on the bleeding edge of
digital communications I hope this does not come about.

I have not seen anything yet that does not have some
warts on it. There are always con's to a method and
at the very least a change from analog to digital on

HF communications will bring changes to the experience
that will not be positive.

I have first hand experience with cell phones and going
from analog to digital here did not improve the sound
quality or reception. Signal coverage actually had to be
improved before the digital hand helds worked well at all.

One constant in this world is that you can not have your
cake and eat it to. A digital signal is not going to sound
as good as an analog that takes up the same spectrum without
sacrificing something else. It does not matter what encoding
algorithm you come up with.

It all comes down to: power / bandwidth / carrier frequency /
encoding algorithm / data rate / time.

The choices you make on the above will not work well
under all the different conditions HF signals are
subjected to. In order for a digital system to actually
be better than analog it would need to be adaptable on
more than just the receiving end.

The paradigm this group is working under where some
magic optimal parameters will be found for all conditions
on some small bandwidth segment where deficiencies in
the link will be made up at the receiving end with
no feedback to the transmitter does not seem like a
big step forward to me.

Sorry, I just can't find it within myself to be
excited about this development.

I appreciate your help but what I have in mind aren't generic jingles wich
can be used (since purchased) by any station. What I have in mind are radio
station jingles, wich identify the radio stations.

Thanks anyway!

541. The 21st Century Offshore Radio Poll

What if . . . The European Union were to offer a pan European offshore broadcasting licence starting in 2001 to one of the historic offshore stations in recognition of their contribution to the development of European broadcasting?

What if . . . Radio enthusiasts could choose who will get the licence by popular vote?

Who would you vote for?

Take the poll at http://www.tts-mediapro.co.uk/

Which offshore station should receive an EU licence for the 21st century?

Another stupid premise is the "StormTeam" or "StormTracker" concept. I can understand it during severe weather, but when the forecast is for mild weather for the next however long...it just seems like marketing BS.

And, has anyone noticed that whenever there are a few snowflakes in the air, stations send out their entire reporting staff to tell you how it is impacting the local area (which can be summed up by the simple statement "The roads suck and the idiot drivers are making things a nightmare").

But I guess it's easier and a lot more dramatic to show a reporter on an overpass describing the obvious than it is to explain how the fine folks at City Hall and MegloMania Inc. are boning you again.

Help me...I'm suffocating in fluff!

(Don't EVEN get me started on how what is essentially a 'commercial ' for a TV show is presented as a news story)

I wish I could do it, that way! Unfortunately, the government insists
that everything I touch be "verifiably accurate" so, I have a $14,990
piece of software (which performs *very* admirably, I might add)
running on a $7,500 computer system (which is networked to several
additional computers which perform various extraneous tasks)... But,
the results are impeccably accurate!
If there are any particular stations you'd be interested in "checking
out", let me know and I'll help in any way I can.

It may be just as well that you lost the original program, as the FCC is in the midst of changing their database format, and the old program most likely wouldn't work anyway. You need a program designed to work with the new data base, when it gets going.

You can request the pattern data from the FCC station lookup page, and then plot it yourself.

You need a VCR with separate audio inputs, usually shown as "line"
inputs. You must feed it the output of some sort of pre-amp. This
can be from pre-amp outputs of a receiver if it is so equipped, or the
"tape out" jacks (same thing in essence). You should also be able to
get away with using the headphone output of a portable radio, if you
have the proper connectors (readily available at RatShack). But in
that case you'll have to be sure you don't have the radio volume
turned up loud enough to overdrive the VCR.

Make sure the radio tuner is tuned to, and is picking up, the desired
station. Then leave the source component on, and program the VCR to
record from its line inputs instead of its own (TV) tuner.

I do this all the time. It works fine.

Edwards anchored CBS-TV's brief midday newscast until 1991 or 1992, so it's
fair to say this consummate Murrow boy bookended Cronkite's career as CBS-TV
anchor by a good stretch at both ends.

Yes, this phenomenon is very real. VCRs can kick off a ton of RFI. Please tell more about the VCR and radio you're using.

My results, briefly:

1. Noise is not a problem with the heavy stereo receiver used for occasional event taping, as it is with the AC portable used for everyday taping. If you're trying to tape off a $20 radio, better results with the Panasonic RF-544 than the equivalent Sony.

2. Best results with 6-ft, heavy braided mono (unpaired) audio cable, and the radio not on the same horizontal plane as the VCR. Too short a cable creates a proximity effect; too long a cable an antenna effect. Experiment with various angles of departure from the VCR and work in three dimensions if you can.

3. Much of the buzz noise comes from the VCR display panel. Better results using the rear A/V inputs, even though you'd probably prefer to use the front for casual audio taping. One of my VCRs was a careless purchase with no display panel at all beyond a couple of LEDs, and this became an ideal machine for taping FM.

Good luck, this is still the best way to go.

Are you trying to record a local station during the day? If you are receiving static you probably have your radio to close to your VCR. Just move the radio away from the VCR. It is also a good idea to test your setup to make sure you have your radio in the best spot to receive a clear signal.......

As another engineer working on the cutting edge of digital communications (wireless comm. technology), I beg to differ.
I did listen to the tests posted on the RN page and while they are short on technical details to make the comparison more meaningful with the best analog technology has to offer, I think that there can be noticeable improvements. The problem I see is that as long as the channel bandwidth remain constrained to 10 KHz max., there is little hope to improve reception quality dramatically. One of the things we have learned with respect to spread spectrum technology is that there is a lot of room to play with when bandwith is available to trade for (lower) power and improved performance.
Another problem I see is that the infrastructure investment in AM and FM is so huge that Digital Shortwave will face stiff competition and the early digital sets are not likely to benefit from economies of scale.

I love to chase a faint signal as much as anyone, but for program listening, if digital technology can offer me the same quality of reception I have now with an R8B, but with a $300 radio instead (I believe this will be possible down the road), I'd be more than game.
But this is more than a technical problem, and it will be the real test to pass if digital shortwave is to fly.

565. North American Broadcasting Company

Newsgroup: rec.radio.broadcasting
Date: 2001-01-30 01:46:07 UTC
From: John <John@NoSpam_SensorySIMS.com>
Message-ID: <t7c76v6guleq05@corp.supernews.com>
Source record: 15920

First, I'd like to thank the people who have commented on North American Broadcasting Company in the past on this newsgroup. With their comments, and my suspicions, I now know that:

North American Broadcasting Company is a SCAM.

For more on the fine folks at NABC, check out:
http://www.geocities.com/SoHo/Atrium/7486/wale.html

Nathan Jett of North American Broadcasting Co. (of Phoenix, AZ) called to suggest I start hosting a radio talk show on one or more 50,000 watt am stations. It's be a 13 week pilot project at about one hour a week run right from here by phone. I can speak about anything but must put down a large sum of money (nearly $4,000) to start.

All BS.

I submit this newsgroup message, for the benefit of the next person to get a phone call.

(please remove "NoSpam_" from return address to respond directly)

If you click "PAMS Store" and scroll by the "Power-Paks" ad at the top, you will find exactly what you're looking for in abundance.

Also, visit www.pams.com. It's the web site run by JAM Creative Services (presently the only authorized company that resings PAMS jingles and the only other authorized seller of PAMS material)--they've been offering a CD box set called "The Magic of PAMS," which includes the demos for every one of the numbered series, their most famous jingles. Pricy, but worth it for a jingle fan!

IIRC, Hughes Rudd did CBS radio newscasts (mornings...I believe) in the mid 70s as did Douglas Edwards. Also, ABC field correspondents did network newscasts in the 70s, such as David Garcia (American FM Network) and John McVay (American Information Network). I'm also sure Ted Koppel did some American Information newscasts as well during that period.

If you're trying to record AM radio, the TV circuitry in your VCR is
probably causing the noise. You might also want to turn off any nearby
TV, especially the one connected to your VCR.
If you have cable TV, you might be getting a ground-loop effect when
the audio source is plugged into the VCR. This happened with me because
the guy who installed our cable never grounded the system. I tied the
cable ground into the power company's earth ground and the "hum" was
suppressed a little but not entirely. I disconnected the cable and it
was clean.
Assuming you're using the "line in" jack for audio on the VCR and
the "line out" jack from your audio source (stereo receiver?), be sure
NOTHING is plugged into the video "line in" jack when you're trying to
record audio only. I've only done it a couple of times with mine, but
never had a static problem --- although the quality was not as good as I
expected! I now use my computer to record off-air and the audio quality
is great!

Whew.. I do agree with the majority of your post... Atlanta did get
shortchanged with FM allocations and move in stations have helped remedy
that situation. Move-ins have not only helped Atlanta and other radio
markets, but they have saved a boatload of small market stations from going
dark.
I have no problem with the Anniston station relocating to Atlanta, but I
relly take to task your comment that small towns do not deserve a Class C
unless they are far away from a big city. A 6kw Class A could cover metro
Atlanta just fine. Radio One in Indianapolis has a very healthy market
share with their 2 Class A's. Out of curiosity, what should a city's
population be before it deserves a Class B or C? At what point in their
growth would they qualify to upgrade their facilities? Perhaps you would
like to rethink your last comment.

I am not certain this advice (below) is correct. I think you need to have some source connected to the video input to provide a synch signal for the hi-fi audio circuitry.

To those who don't understand,

If you are a "daytimer", as opposed to a "night owl", you can not possibly understand Art's appeal. Contrary to the popular paranoia about Art being all UFOs and bigfoot, he is not. He is a conversational and relatable talent, who is like the night owls who listen, interested in things other than the usual media fare (ie who died today, who was raped, what bank was robbed, what does this politician think about the usual crap).

There is more to life than the usual political battles, the usual bad news, and the usual anti Clinton (now anti Bush) fare of talk radio. That's his appeal.

Actually, a class A in Atlanta would have a hard time. Teh Arbitron Metro
is 20 counties, and an A would have a hard time just covering the central
city. Unless, like the Indianapolis stations, a format can be found that
appeals to a bunch of people living and a reduced area, A's are no good in
most of the top metros.

The issue is geography. Another example is Los Angles, where there is
considerable simulcasting of two and even three A's to cover more of the
market... and they still can not do it. Another: Market 13 is so big
geographically that the only facilities that cover it on FM are trimucasts
of 3 full B signals.

I'm just back from 2 weeks on Guadeloupe. At night I was able to hear WOSO 1030 San Juan. They must be the largest-coverage English-language station on Puerto Rico. And an odd station. They're news when I could hear them. But a mixture of CBS on the hour, some CNN radio, and a couple of hours of NPR "All Things Considered".

How can the station be paying its bills, even if they are pretty small? Surely they don't get any of the ad money that NPR collects, and those hours in evening drive time would seem to be a prime sales period.

Is WOSO the only commercial US station carrying NPR?

BTW, there are still some AM stations on 5 kHz channels, such as ZIZ on 555 kHz from St Kitts & Nevis.

Source record: 15941

Mark J. Cuccia <mcuccia@tulane.edu> wrote:

"Every now and then, if there's a "major" story breaking, CBS/Westwood/Infinity will have the CBS Radio hourly news hosted by someone like Dan Rather. He might just do the "headline" story itself (sometimes even on-the-scene), but then the remainder of the newscast will be anchored by a CBS/Westwood/Infinity radio person from NYC."

The same sort of thing happens sometimes on the weekend TV newscasts -- it's called "bigfooting."

"There was also a 23-min feed of "Face the Nation" later Sunday afternoons on CBS Radio in the 1970's, where there were no promos/PSAs, and no mini-bio's from George Herman. It was just strictly the interview itself, with BRIEF open/close announcements, and the long-form features jingle at open/close."

That would have been to make time for network and/or local news at the top of the hour (the 29-minute version really wouldn't have worked well rolling at :06:00, so it would have been used at the bottom of the hour instead).

"ABC Radio (branded for the American Information Radio Network) would run an audio version of "Issues and Answers" which was renamed "This Week with David Brinkley"."

This Week replaced Issues And Answers, and had no connection to the former program.

"The radio versions of "Face the Nation" and "Meet the Press" probably pre-date the TV versions, but if not, the radio and TV versions started at the same time in the 1940's or 50's."

Meet The Press started on radio in 1945 and moved to TV in late 1947. Face The Nation started as a TV series in late 1954.

"I don't know what Disney/CapCities presently still runs "This Week" for ABC Radio."

Apparently not -- I don't see any mention of it on the ABC Radio Networks web site.

"(Now that Brinkley has retired, what does ABC News call the program on ABC-TV anyway?"

This Week with Sam and Cokie.

No. Just another cheap whoring stunt by Cheap Channel. The call letters of
the Orlando station are actually WFLF, but they're only mentioned in the Legal
ID...a very quick "WFLF/Pine Hills."

The real travesty here is that WFLF, with it's 50KW @ 540 and a transmitter
location SW of Orlando, gets a strong signal into Tampa Bay!

I'm sure the staff of the real WFLA (which became a shining example of a
News/Talker under Jacor) really appreciates the audience confusion that will
now result as Cheap Channel steals their call letters and puts them on a
second-rate, largely satellite-driven Orlando station.

As they say, "it all depends". For many years I have recorded long-form FM programs on an old Panasonic VHS-HiFi VCR - but the VCR has to be tuned to a local TV station to get sync. An even older Sony Beta VCR would create its own sync with an internal sync generator.

Recently I was called in to diagnose the inability to record external audio on a VCR. It seems that this "new, improved" model requires external video for sync whenever the external audio input is used - bummer. Fortunately the owner had two VCRs, so one could be used to provide the video for syncing, while the audio from a radio was being recorded. Would make Rube Goldberg happy.

There was a time when big [for the time] transmitter tubes were cooled by
circulating distilled water around the tube and out to the wall of the
transmitter hall where a huge radiator and fan were installed.

If you took the top off the radiator you found out all about steam radio!

I was just a boy.....

And Radio One doubtless learned the secrets of Class A with their 102.3 which covers the Washington, DC, area quite nicely. It now places well up in the top-10, ARB. The antenna is on the same tower with WAMU-FM and WGMS, etc., and is line-of-sight to much of the DC metro area. Coverage is good out as far as Dulles airport.

Etc.

I'd have to agree with "it all depends", but FWIW, I've been recording
audio (FM) on RCA and/or Hitachi HiFi vcrs for quite a few years now.
Also sound card output.

I do nothing more than connect the respective audio out and in.

Actually, although I know what he says about the tubes is true, my use of the locution steam radio is intended to be a mildly jocular allusion to what we called old-fashioned coal- or oil-driven steam locomotives when electric Diesels came in. Steam trains versus streamliners. Some handful of us refer to steam radio versus radio with pictures.
Like any joke you have to explain, this one loses any potential for amusement.

I was a boy, too, of course, but not a particularly small one.

While this is theoretically true, I found that the programs tended
to be pretty much focused on the "paranormal". I felt disappointed,
because I felt Art himself was a good host and was willing to let
the guest lead. The potential of having non-stars as guests, to
come in and chat on whatever they are interested in is wonderful.

But I found it was rare that there was any of this sort of programming,
and I tended to tune out, rather than in.

A few names do come to mind, like George Carlin and "Captain Crunch",
and even Wayne Green. But I have a hard time remembering other guests
that weren't talking about the "paranormal" (not quite the right word)
or "government conspiracy" type things.

Perhaps the problem is that people tend to be too specialized now.
So as you once upon a time would have had science fiction writers
who actually pursued science as a hobby or profession, now you get writers
who set out to be writers first.

A good guest, ie someone who has something interesting to say and
can say it well, may be too hard to find. So it's easier to stick
to the "paranormal" experts and what seemed to be a fairly small
selection of repeat guests.

No problem here, either...but a technique I like to use is to use
the "simulcast" feature to run video from the tuner and audio from
the line input. I tune the tuner to the Weather Channel*, which
gives me a quick and easy way of providing a visual display of time
whenever the Weather Channel goes to the local forecast cut-ins.

Not all VCRs have the simulcast feature and my newer one doesn't.
Fortunately, my older one does...it is very handy to have.

*If cable systems still had character-generator channels with news
or weather info accompanied by a clock, I'd use that instead. But I
haven't seen one of those in years. I suppose an alternative would
be a PC with a video card generating a clock display and feeding
that into the VCR.

Actually, no. The 9KHz channels start at 540-549-558-... with the two
lowest ending in 5 being 585 and 675. To my knowledge neither has been used
in the Caribbean in the recent past.

I know of nothing on the 9KHz channels in the Western Hemisphere.

I'm wondering if the problems people have with posts not showing up are due to the following reason...

Each news server has to be configured such that it recognizes that moderated groups are moderated. If incorrectly set up, a news server may locally accept a post for a moderated group and add it to its local spool. Then it will try to send it to other news servers, which (if they are set up correctly) should refuse to accept the message.

Those of us who are having problems with posts not showing up should double-check with their ISP to make sure rec.radio.broadcasting is set up as a moderated group.

Nope... There are a number of other xx5 kHz stations in the eastern Caribbean. Using the 9 kHz channel of allocations would be a mess. IIRC, these stations are "notified" to the international bodies as being on 10 kHz channels. Radio is a bit more informal some places in the world, and these stations are often owned by the local government.

The odd thing is that some rental cars in the islands have "Region 2" radios with 10 kHz AM channels, I've seen at least one with "region 1/3" 9 kHz channels, and I think one with 5 kHz steps.

92Q (WQQK 92.1 Hendersonville, TN) has from time to time placed #1 in the Nashville market despite a Class A signal. They, too, do cover the center city (where their target audience lives) very well.

I suppose the key is in targeting an audience that lives where your signal goes...

Except for an English/Spanish religious station, WBMJ-1190, they are the only English staiton in PR. They are very directional protecting WBZ in Boston and XEQR in Mexico City. All the signal goes SE, missing most of the Island of PR.

> And an odd station. They're news when I could
> hear them. But a mixture of CBS on the hour, some CNN radio, and a
> couple of hours of NPR "All Things Considered".
>
> How can the station be paying its bills, even if they are pretty small?
Surely they don't get any of the ad money that NPR collects, and those hours in evening drive time would seem to be a prime sales period

Puerto Rico is the US' 13th largest market per Arbitron. WOSO gets about a 0.5 share on the average, and comes in about 40th overall. 69 stations make the book in PR, the largest having a 13.9 share. Still, WOSO is a very niche staitons with its english talk format. It gets about $1.6 to $2 million in gross billing, which is good for a standalone AM in PR.

Also, 7-Midnight is not a good sales period for radio, particularly AM. In PR, practically no agency buys after 7 PM. Agencies buy about 95% of the time sold on major stations in PR, so it literally means that unless you sell 6 AM-7PM you will not sell anything at all.

>
> BTW, there are still some AM stations on 5 kHz channels, such as ZIZ on

Used to be very common in the Caribbean and parts of Latin America. Digital radios have made most of them go away.

I don't believe there are any AFRTS radio outlets left in PR. The ones that did exist, Ramey and Ft. Brook, closed in the 70's. Roosevelt Roads has an FM for a while, but I am not sure it is active, and, in any case, the location of that base is blocked by mountains from covering anything except the base.

The 1370 religious station on Vieques and the 1190 religious station in San Juan carry some English religious shows. Vieques does this as it is actually more of a Virgin Islands station than a PR station, and the majority language of the USVI is English.

A news release from Radio One indicates KJOI 1190 AM in Dallas has been sold to Clear Channel for $16 million.

The release indicates that Clear Channel will take over programming tomorrow (feb 1) under an LMA agreement.

Published reports several weeks ago said Clear Channel will flip this to Fox Sports Radio and may add the Jim Rome show. (1190 has been running an automated oldies format with little or no ratings for over a year)

This is particularly interesting given the fact that ABC has previously announced plans to put ESPN radio on 103.3 in the DFW market when that station's signal upgrade is complete. (probably sometime in March)

I'm a night owl, and the few times I've stumbled on to Art's show I found it
(unintentionally) hilarious. The people on the show seem to be a burger,
fries, drink, toy and box short of a Happy Meal.

Well, that's my two cents.

Except for an English/Spanish religious station, WBMJ-1190, they are the only English staiton in PR. They are very directional protecting WBZ in Boston and XEQR in Mexico City. All the signal goes SE, missing most of the Island of PR.
>>

Namely because WBZ is the Class I-A, and XEQR was added to the NARBA list at the last minute as a Class II-B for Mexico, and restricted by NARBA to 5 kW ND nights.

Likely, XEQR on 1030 with 5 KW ND nights and WBZ also on 1030 with 50 kW DA-1, and 1050 in Monterrey, NL, was the "justification" for KOB claiming that it's special authorization on 1030 was "technically infeasible".

That ultimately got them 770 with 50 kW DA-N and a 25 year-long lawsuit with WABC, but it also meant that there was now no Mexican clear, either co-channel or within 20 kHz.

There was (and still is) a Mexican clear on 800 in Juarez, however.

613. Re: CBS TV anchors on CBS RADIO--Doug Edwards Not Murrow Boy

"Cooperstown.Net" <jjslote@mvip.net> wrote in message : Edwards
anchored CBS-TV's brief midday newscast until 1991 or 1992, so it's
: fair to say this consummate Murrow boy bookended Cronkite's career
as CBS-TV
: anchor by a good stretch at both ends.
:
: Jerome
:
Alas, Douglas Edwards was not a "Murrow Boy" at all, though he did
some reporting for CBS during the WWII days.

The "Murrow Boys" term refers to the group of men (and one woman)
hired by Edward R. Murrow to gather and report for CBS news from
Europe and collatoral WWII areas in the period just prior to WWII and
for a bit after the war.

The "Murrow Boys" were:

William L. Shirer
Mary Marvin Breckinridge (very briefly)
Howard K. Smith
Charles Collingwood
Eric Sevareid
Larry LeSueur
Richard Hottelet
Winston Burdett
Bill Downs
Thomas Grandin (very briefly)

CBS did, toward the end of the war, send some non-journalist
announcers and newscasters to help with European coverage, namely Ned
Calmer, John Daly, Bob Trout, and Douglas Edwards.

Walter Cronkite was not one of the boys. He worked for United Press
during the war and joined CBS later and, while an accomplished
journalist, was never considered to be part of the annointed elite
that are in the list above.

Also, Bill Shadel, Charles Shaw and Gene Ryder helped with CBS
invasion coverage but were not considered as members of the "boys."

Thanks.

Don

614. Two AM stations-Same Calls-Is this legal?

Newsgroup: rec.radio.broadcasting
Date: 2001-02-02 01:48:40 UTC
From: m_appenzeller@my-deja.com
Message-ID: <t7k4fo7c97mad5@corp.supernews.com>
Source record: 15825

For the past month, AM 740 WWNZ in Orlando, FL has been simulcasting sports formatted AM 540, WQTM, in anticipation of a format change.

Yesterday (Monday), the switch happened, AM 740 now has the sports format and the WQTM calls.

AM 540 has become a new News-Talk format station, with the calls WFLA. The problem is that WFLA is already used by a Tampa FL station on 970, and Tampa's NBC TV affiliate is WFLA-TV, (Ch. 8). I made a call to the real WFLA (Tampa) station last night, and the person in the newsroom I spoke to was not aware of the Orlando station using its call letters, or of any planned change to their own calls.

Is this legal for these two stations to be using the same call letters, or should my next e-mail be to the FCC...?

[Sorry if this appears as a duplicate post... I posted this on 1/30, it showed up on my local news server, but still not on Deja News after 2 days... I don't think the post got out, so I reposted via Deja News.]

615. KOMA: help needed, Oklahoma City

Newsgroup: rec.radio.broadcasting
Date: 2001-02-02 01:48:41 UTC
From: Rick Lewis <ricklew@primenet.com>
Message-ID: <t7k4fpf450ahd7@corp.supernews.com>
Source record: 15826

I'm looking for someone willing to tape the "KOMA Kountdown" for me on a weekly basis, from at least near enough to OKC to receive the entire program.
KOMA Radio, 1520 AM and 92.5 FM, counts down the survey from the current date, from a give year, 1959-1969, inclusive.
The program features that week's top 40, as well as some "KOMA KLIMBERS", and, in most cases, the Pick Hit of the Week.
It airs from 6 to 9 AM, Central Time, every Saturday.
Probably the best way to do it would be on slow speed VHS tape, since that would only require setup in advance.
It would take two six-hour tapes in a 4-Saturday month, going into a third if there are five Saturdays.
I can't make you rich off this deal, but can reimburse you for time, trouble and tape.
Or, if you already get up early and write down the lists, maybe an hour or two of extra sleep is all the trade you need.
If you can help, please email me at: ricklew@inficad.com.
I had been able to hear KOMA on the Internet, but unfortunately, they chose to drop their Internet feed, citing the Digital Millennium Copyright Act.
So any offers would be greatly appreciated.
Thanks!

A friend has a small production company with some quite successful campaigns for local advertisers. These campaigns can be used by radio sales departments to entice clients to spend money on THEIR stations. What media are sales people reading these days? What's the best place to advertise to reach radio sales departments?

What I find interesting is that $1880 was below the reserve. These mics are available for $1000 each, from time to time, even in pristine condition.

Oh, yes, I can. And Larry King was a much more entertaining, and more
talented, late night radio host than Bell will ever be. Bell's nasal
affection, especially, gets irritating, and I somehow have always come
away from listening to one of his shows with the impression that he's
not much smarter than a door knob.

Note that it usually *looks* to the poster as if the post has made it on. And they may receive responses from all over the world, because other ISPs may outsource their news servers to the same company that their ISP does. And to make matters worse, the news server may correctly show RRB as "moderated". It's just not configured to forward their post to the moderator.

Recent posters who reached only a fraction of the RRB readership include
applaudio
Ruud Poeze
M. Hale

...and of course those were only the ones who made it onto my little subset. They were excellent posts, I might add.

One thing to do is look at the "Organization" header of your ostensibly successful post. It should be "Airwaves Digest http://www.airwaves.com". If it isn't, your post didn't make it onto most news servers. Also, look for your post on:
http://www.deja.com/[ST_rn=ps]/group/rec.radio.broadcasting . Also, sort your display by date and time, and see if your post has a "sent" time close to the others.

The sure alternative to "New Post" and "Reply", is to email your submission to airwaves@airwaves.com . My personal opinion is that it is hopeless to expect individual newsgroup records to be maintained by user correspondence to individual news servers. The news server needs to protect itself from incorrect information. There's gotta be a way to blast the correct configuration to all, or else lightly moderated newsgroups like RRB are going to have a very difficult time.

Nope. The Caribbean and indeed parts of Latin America had home grown spacing. Through the 70's, Costa Rica made one assignment every 25 kHz starting at 550. Surinam had stations on 914, 725 and 645. The Netherlands Antilles had stations in St. Maarten on 1295 and in Aruba and Curacao on 1425 and 855. There were AMs in The Camans on 1205 and 1505. Antigua had one on 1505 for a while. Monserrate had 885. Lighthouse on St Lucia, I think, was on 1165. The WIBS, Windward Island Broadcasting System was on 595, 705 and 895 if I recall. 4VEC in Haiti was on 1035 for decades. Ecuador assigned every 5 kHz through the 70's (I at one time owned two stations on frequencies ending in 5), as did Nicaragua, Panama, Honduras and El Salvador. Peru had a few uneven stations, like 854, 985 and such.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

I don't know for sure what is going on there, but it is possible to call yourself anything you want except once per hour for the legal ID. I'm sorry to report, this is being done a lot.

There are many stations around the country, including one here in Des Moines, calling themselves KISS. There's a "KISS" format. It is probably legal, but I consider it unethical. It may be meeting the letter of the law, but not the spirit and the FCC ought to do something about it.

[Moderator's Note: Unethical? I disagree, unless the intent is to specifically cause confusion that will lead to listeners turning off one station in favor of another. There is usually only one Kiss in each market.]

The rating services could also discourage this by only counting a diary if shows the real call letters, or no call letters and just the frequency. Wrong call letters get tossed out.

632. Douglas Edwards of CBS News (Radio and TV), and other CBS/NBC Radio/TV

Newsgroup: rec.radio.broadcasting
Date: 2001-02-03 14:06:56 UTC
From: "Mark J. Cuccia" <mcuccia@tulane.edu>
Message-ID: <t7o4405o5u28fb@corp.supernews.com>

>> Edwards anchored CBS-TV's brief midday newscast until 1991 or 1992,
>> so it's fair to say this consummate Murrow boy bookended Cronkite's
>> career as CBS-TV anchor by a good stretch at both ends.

Douglas Edwards retired from CBS News in April 1988. He passed away around 1990 or 91, right about the time that Paley passed away... (May both of them, R.I.P..... Those two *MADE* CBS the great network that it was for all of those decades last century)

Doug Edwards' last 15-min weekday evening "The World Tonight" newscast on the CBS RAD))|((O NETWORK was on Good Friday, 1-April-1988. I would also assume that his last CBS-TV mid-day/daytime newscast was about that same time as well.

Actually, Douglas Edwards did the 5-min TV "CBS Midday News" throughout the 1970's (and possibly 1960's), after he had anchored the (still 15 min at the time) "CBS Evening News" on CBS-TV from 1948-62. Cronkite took over in 1962. Shortly after Cronkite taking over, the "CBS Evening News" on CBS-TV was expanded to a half-hour. But the 5-min TV "CBS Midday News" of the 1960's/70's... the daytime soap "Love of Life" was only 25 min's (actually 24 min). The remaining 5-mins was the "CBS Midday News". In the 1960's, CBS-TV had *TWO* separate 5-min weekday daytime newscasts... Later on in afternoon, possibly following "To Tell the Truth", or the soap "Secret Storm" (which BTW, was Edith Bunker's favorite), or maybe during "Art Linkletter's Houseparty", there was a 5-min "CBS Afternoon News". I *THINK* that Mike Wallace may have been the anchor on this newscast. Whichever "base" program was on during that half-hour (and offhand, I don't remember if it were "To Tell the Truth" or "Secret Storm" or "Art Linkletter's Houseparty), just like "Love of Life", was only 25 (24) min's, with the "CBS Afternoon News" 5-mins completing out that half-hour.

NBC-TV also had one or maybe two 5-min newscasts during weekday daytime in the 1960's and 70's. Edwin Newman hosted the 5-min "NBC Midday News" which followed 25 (24) min "Eye Guess" game show. Later, "Eye Guess" was replaced with another 25/24 min game show. One or both of those game shows on NBC-TV was hosted by Bill Cullen.

Sometime around the later 1970's, NBC-TV and NBC News decided to abandon the "full" 5-min newscast, and did about three different one-minute "NBC News Updates" during the weekday daytime, right near the end of a half-hour segment.

And in the early 1980's, CBS-TV and CBS News followed suit with about three different one-minute "CBS Newsbreaks" during weekday daytime. I think Douglas Edwards continued to host one of them.

Both the NBC and CBS Television Networks had started these one-min news 'update' segments during prime-time beginning in the mid-1970's. Actually, CBS didn't start the one-minute "CBS Newsbreaks" in prime-time until Jan.1977. For several years through Dec.1976, CBS had those one-minute "Bicentennial Minutes" one-minute segments during prime-time (remember them?! :-)

The one-minute "CBS Newsbreaks" throughout daytime and prime-time were anchored by a CBS news person, but every so often, it was someone I would always hear anchoring (or reporting for) CBS News on CBS Radio. Therefore, I was finally able to *SEE* what they looked like: Stephani Shelton, Doug Poling, Rita Sands, David Jackson, and so forth. Those were the CBS Radio hourly newscast anchors who did evenings and overnites back in the 1970's.

> invasion coverage but were not considered as members of the "boys."

> Don Forsling - ddforsling@qwest.net

THANKS for the info on the "Murrow Boys". I knew that Cronkite was not with CBS until *AFTER* the war -- I knew he was with United Press (before they merged with International Press Service, to become UPI in the late 1950's or so)...

But I would have thought that Trout and Edwards were considered "Murrow Boys".

As for Daly and Edwards, both of them not only did newscasts (Edwards continued his career mostly as a newscaster), but both Daly and Edwards also did various *OTHER* announcing duties, and even hosted/moderated GAME/QUIZ shows in the 40's and 50's. Daly was moderator/host of the famed Sunday evening "What's My Line" panel show throughout the 1950's and well into the 1960's. (What's My Line had started on CBS Radio, and then was on *BOTH* CBS Radio and TV for a while in the 1950's, but I don't think it were 'simulcast'.....
I think the radio version was a taped or transcribed audio-cut of the live CBS-TV version, and aired later in the week on CBS Radio).

Daly also did a Murrow-like "Person-to-Person" type of presentation for the pilot episode of "Green Acres" in Fall 1965, where he was in a "studio" doing a "TV Personality" type of program with "TV monitors" behind him, narrating the story of Oliver Douglas wanting to be a farmer but becoming a Park Ave. attorney, eventually leaving NYCity with Lisa, and moving to a farm. He narrated the episode in his "deadpan" style.

In the later 1940's and 50's, Douglas Edwards hosted several game shows on CBS Radio and CBS-TV. One that comes to mind that I've heard about was "Pantomime Quiz".

In the 1950's, Douglas Edwards was also the "newscaster" on the CBS Radio midday "news-and-soap" program "Wendy Warren with the News". I heard a summary and clips of this program on CBS Radio's 50th Anniversary special (hosted by Cronkite) back in 1977...
"Wendy Warren" was a fictitious name of a woman who did a "newscast". She would open up the program as "Wendy Warren" and give a brief intro to Douglas Edwards with the news. Edwards would actually take about two or three min's giving REAL news headlines, and then turn the program over to "Wendy". For a few more minutes following Edwards REAL newscast segment, "Wendy" would give news of interest to women, especially "housewives" at home, such as cooking tips, beauty tips, housecleaning tips, etc. Then she would do a "closing" of the broadcast, Doug Edwards as an "announcer" would come back and say something like "Okay, Wendy, that's the broadcast", She'd thank him, and then another announcer would start off some narration leading into the latest SERIALIZED (soap) drama of Wendy's latest trials and joys of life and romance, while organ music would play. I think that Proctor and Gamble was the sponsor. While the 15-mins (total) program was called "Wendy Warren and the News", the only REAL news was the segment of *NEWS* that was read by Doug Edwards at the beginning.

> somewhere...and a QSL
> on my wall)

I forgot a ton of them... Panam&#65533;, in the 60's, had at least a dozen.
Nicaragua on 555 and 1475 were widely heard as was 715 in Honduras and 1175
form Sonsonate, El Salvador. All were licensed to those frequencies. I even
made at least one mistake: Radio Kelkboom in Aruba was on 1435, not 1425.

I believe that Belize was the only assigned station in NA that was not
either on a 10 kHz or 5 KHz increment. Even the French at St. Pierre et
Miquelon departed from European standards to put the RTF Overseas station on
1375. Similarly, Lima, Peru on 854 was an intentional "odd" frequency and, I
believe, the only one like that in SA except for very low power Radio Exitos
in Quito which was on 1111 for a decade or so.

Do you mean your friend produces jingles?

If it's manageable, your friend should contact the General Sales Manager at each station to pitch the product.

Sales managers will generally listen to anything that will help bring in money.

Generally, sales people (I'm not talking managers, I'm talking on-the-road sales people) usually don't read Radio Ink. When it arrives at the station it's hoarded by the top management who pass it around.

Salespeople generally look for new business in local publications: the local newspaper for direct business or the city ad club publication to find out what agency got which new accounts. Sometimes your relationships in the market are worth more than any publication.

Long story short: get to the sales managers!

I wasn't objecting to the station's use of a "slogan", except for legal ID - That's the norm on FM in many cities, it was that the "reformatted" station (AM 540 Orlando)was using the legal calls of a major AM news-talk station in an adjacent market (WFLA 970 Tampa)as its "slogan". The Orlando station IDs every few minutes as "News-Talk 540 WFLA". This station is 50kW, located SW of orlando, and, according to another thread, can be received well in Tampa, where the "real" WFLA is. And, no, they are not simulcasting.

636. Did you attend GrahmJC...home of many NE radio folks?

Newsgroup: rec.radio.broadcasting
Date: 2001-02-05 05:07:48 UTC
From: patalder@my-deja.com
Message-ID: <t7sd94ugrt6a6@corp.supernews.com>
Source record: 15847

I'm trying to help out the Reunion committee in this, so if it isn't where this goes, let me know of an alternative. But if you are a former student...pass it on!

The current Grahm Reunion II, scheduled for the 18th and 19th of May 2001 in Boston.

Arrangements with the Fairmont Copley have been finalized. Sharpened the pencils and reduced the prices from $144 to $124.50 for all three events, while throwing in a Grahm Junior College coffee mug. The only hitch ... if we don't hit 90% of room reservations (20 rooms each Friday and Saturday night -- we have 11 reserved for each so far), we'll have to pass the hat and raise a $500 room rental fee. All prices quoted included taxes and gratuities.

Friday Night Reception (8:30 to 11 PM): 2 drink tickets with munchies cheeses/crackers, vegetables with dips and a keepsake mug. Additional beverages available at cash bar $24.00

Saturday Continental Breakfast (7 to 10 AM): juices, pastries, muffins, breads, fruit/berries, coffee and teas $20.50 Gives us a place to meet and finalize plans for
Saturday free time to schedule smaller group activities or re-visit your favorite haunts.

Saturday Dinner (8:00 PM): Grande Dame Buffet: lobster bisque, appetizers, salads, vegetables and desserts. Entrees: rock shrimp and bow tie pasta with pesto vinaigrette; grilled salmon with sorrel cream sauce; roasted mushroom salad; herb marinated chicken breast with mushroom sauce; or, sliced beef tenderloin $80.00

50% deposit due by 15 March 2001
100% due by 4 May 2001

Hotel info - keep in mind BU has graduation that weekend, book early:
Fairmont Copley Plaza room rates $259 (single or double) 617-267-5300 (reservations: 800-527-4727). The Copley has set aside a block of rooms. Identify yourself with the Grahm Reunion Group. Reservations must be made by 18 April 2001.
Buckminster Hotel (the old Leavitt Hall) still has a few rooms available $179 to $279 per night. 617-236-7050
Howard Johnson's Kenmore Sq. also has rooms available around $235 per night. 617-267-3100.

Reunion Requests:
To request specific music, contact Lou Simon (email below)
To include video/audio clips, contact Cindy Mace Arnett or Doug Netrour

(email below)

Mark.....

Thanks for the excellent history on the early (and glory) days of CBS and NBC's news operations.

I do have one question, though, about Douglas Edwards. I remember vacationing as a kid in the Fort Myers, Florida, area around the late 70s/early 80s and watching a local news report on CBS-affil WINK-11 anchored by Douglas Edwards. Is this the same man who was on CBS for so many years? The set was very simple, and if I remember correctly, the newscast wasn't that long.

I have had many jingles made by Ken R. in Toledo from 1990-1999, when Ken retired. Ken was fast/quick, good and not pricey!
Does ANYBODY other than Jam make jingles at an affordable price. I do not own any stations, but have had these done for an in-home studio, non-broadcast!
HELP!

Speaking of WBZ, I live in the Chicago area where you can no longer
hear-"BZ"
WNVR, (or whatever their calls are), now operates 24 hours per day on 1030.
Too bad, I enjoyed listening to WBZ at night.

Rick

Since I think my ability to post to this group has been fixed<g>...

I decided to "stake out" 1510KHz two Sundays ago. I heard three stations under WLAC (whose transmitter is 20 miles away, but I'm in their null for KGA) and identified two of them:

KVCI Canton, Texas w/religious rock music. I wonder if the gospel might have been a special program on this station?

KMND Midland, Texas w/nostalgia & a call-letter ID.

Neither station should have been on - it was well after sunset.

Absolutely! I lived 22 miles north of Boston (in Lawrence) and could not get 'MEX at night.

The death knell of the classic 1510 was sounded when WNAC (680) changed its call letters to WRKO and went all rock-and-roll. WRKO also succeeded to snag WMEX' number 1 DJ = Arnie "Woo Woo" Ginsberg. That finally gave Boston a full-time rock and roll AM station that could be heard around the clock in the entire metropolitan area.

Since Cheap Channel also owns the real WFLA, my guess is that they are free to bastardize the call letters as they see fit. If you listen real closely, you'll hear a quick "WFLF, Pine Hills-Orlando" right before news at the top of the hour. WFLF are the real call letters.

Obviously, Cheap Channel wants to get some Orlando mileage off the WFLA calls. WFLA has been very successful in Tampa Bay for several years. But are they causing listener confusion in the process? Most certainly. WFLF's 50KW @ 540 puts a decent signal into Tampa Bay! Both 540 and 970 can be heard over a large area between St. Petersburg and Lakeland.

Of course, in today's world of megaopoly radio, all that matters is the allmighty $$$$$$. Ethics and listeners be damned.

The new calls on 540 are officially "WFLF". They may say it very fast and
it sounds like WFLA.

Dear Drew:

They referenced 1966 in the song. ZZ also make reference the preachers who were on the air at the time. I don't think they were talking about rock (and roll) radio.

I was never sure who, specifically, if any, they were singing about, either, but we unofficially adopted the song when we signed 91X on in September 1978.

Another pathetic attempt by Clear Channel to maniupulate diaries

WFLA 970 in Tampa is just that.

WFLF is 540 in Pine Hills, Orlando. Thats what the legal calls are. But
(much to the embarassment of the announcers) they are told by CC management
to use newsradio 540 WFLA as their moniker

sick , isnt it.

Mark J. Cuccia <mcuccia@tulane.edu> had written:
| >> Edwards anchored CBS-TV's brief midday newscast until 1991 or 1992,
| >> so it's fair to say this consummate Murrow boy bookended Cronkite's
| >> career as CBS-TV anchor by a good stretch at both ends.
|
| Douglas Edwards retired from CBS News in April 1988. He passed away
| around 1990 or 91, right about the time that Paley passed away...
| (May both of them, R.I.P..... Those two *MADE* CBS the great network
| that it was for all of those decades last century)

I think you're forgetting about a few other people, such as Frank Stanton (who's still very much alive), Fred Friendly, Richard Salant, etc. etc. etc. etc.

For all their interpersonal frictions, Paley and Stanton were one of the great management teams of all times. CBS has been drawing down on the capital that Paley and Stanton built up for more than thirty years. Things like 'Survivor' pretty much tell you that that capital has now been used up. The radio network seems to be in slightly better shape, although there's a cheap sound about it that it didn't used to have.

Cross-posted to:
alt.radio.international,alt.radio.uk,alt.satellite.radio.europe,rec.radio.broadcasting,uk.media.radio.misc,uk.media.tv.sky,uk.radio

This week has seen major developments regarding the time-table for the closure of Radio Caroline's analogue satellite service. A few weeks ago we were officially advised by Flextech Limited that they may not be able to provide analogue transmission facilities after the 31st March 2001. However, this news was off-set by the view that there was a good chance that an
alternative operator of the transponder would up-link via the Maidstone Studios and we could continue with the service until our own perceived deadline of the 30th June 2001.

Peter Moore has asked me to announce that, following discussions this week it now looks almost certain that Radio Caroline's analogue service on the Astra Satellite will close on the 31st March 2001. At this moment in time, we are looking at new digital and other options for continuing and expanding the service but no final decisions have been made.

Mark Stafford
Radio Caroline

>down on the capital that Paley and Stanton built up for more than
>thirty years. Things like 'Survivor' pretty much tell you that that
>capital has now been used up.

Hmm. The show beat Friends. I'd be willing to bet that, if Paley were in charge today, he'd do the same thing. Remember that Sarnoff wanted radio to be uplifting and tasteful. Paley stole NBC's talent and made a popular network.

Paley was a fierce competitor. He'd do what needed to be done. If CBS needed Survivor it would get Survivor. It has nothing to do with stored capital. It has to do with survival.

>but nights the Orlando station has a broad and deep null (0.1 kW or less)
>towards XEWA.

Right. But daytime, they're there loud and clear.

Mentioning the nulls brings up another laughable ploy by CC: During the Limbaugh show, Rush now voices recorded drops for "The 50,000 watt blowtorch, News Radio 540, WFLA."

Blowtorch? HA! That pattern has more holes than a piece of mouse-infested swiss cheese. WDBO's 5KW @ 580 has a much better overall signal.

I'm not a radio person, and I'm not familiar with KLUV, although I live
in the DFW "Metroplex". Many stations have their towers on Cedar Hill,
an area to the southwest of Dallas on I-20. I hope someone else in the
Dallas area radio business can further help you. Best,

I don't remember seeing this mentioned here, so forgive me if it was.

Did anyone else notice the "HAAT Calculations / Service Contours / Contour Maps" link on the FM side of the FCC website? A few pages later, you actually get a projected contour map of FM stations. (The AM is next to useless still, since it hasn't been revamped yet.)

Why are the announcers embarrassed? If this is so oppressive to them
they're free to find work in a less stressful industry. In today's
radio they're very lucky if this is the highest level of embarrassment
they'll endure. I can only imagine how they must have suffered reading
those spots for Peruvian cellular licenses.

It always saddens me to hear that announcers are unhappy.

From: Don Forsling <ddforsling@qwest.net>
Message-ID: <t7tublsgq1kod4@corp.supernews.com>
Source record: 15884

"Mark J. Cuccia" <mcuccia@tulane.edu> wrote in message
news:t7o4405o5u28fb@corp.supernews.com...
:
: Douglas Edwards retired from CBS News in April 1988. He passed away
: around 1990 or 91, right about the time that Paley passed away...
: (May both of them, R.I.P..... Those two *MADE* CBS the great network
: that it was for all of those decades last century)
:

What? Paley couldn't have done it without the help of an
announcer/newscaster?

This is the first time I have ever seen Douglas Edwards mentioned in
the same sentence as William S. Paley. My goodness, Edwards was
certainly a competent news reader and a credit to the network, but to
give him equal billing with the _founder_, chairman, and for most of
his life, the largest stockholder in CBS is, I'm afraid, absurd. It's
like saying that NBC owes whatever glory it has to David Sarnoff and
John Cameron Swayze.

CBS became a great network because of the business acumen and
decisions made, starting with its founding in 1928, by such
policy-making individuals as William S. Paley, Ed Klauber, Paul
Keston, Paul White, Fred Friendly, Richard Salant, Bill Leonard (these
last four
directors of news), and of course (and particularly) by long-time CBS
president Frank Stanton. There were many more.

Douglas Edwards was not a policy-maker. He was talent. So was Arthur
Godfrey. So was Ed sullivan. Of course, these talents and many more
were important to the health of CBS. But the credit for making the
network great goes more to the men and women who hired them than to
the individual performers.

And make no mistake about it, Edwards was a performer. He was not a
journalist. The "Murrow Boys," to _their_ slight discredit, looked
on him
with disdain. He did what he was paid to do very well indeed. But he
was far from being a key to the success of CBS.

Best.

Mark.....

Thanks for the excellent history on the early (and glory) days of CBS and NBC's news operations.

I do have one question, though, about Douglas Edwards. I remember vacationing as a kid in the Fort Myers, Florida, area around the late 70s/early 80s and watching a local news report on CBS-affil WINK-11 anchored by Douglas Edwards. Is this the same man who was on CBS for so many years? The set was very simple, and if I remember correctly, the newscast wasn't that long.

Be sure to tune-in to the fastest-growing talk radio show in the world:

"The Hal Turner Radio Show"
Heard in 50+ countries around the world
Every Monday evening from 2300-2400 UTC
(8 PM - 9 PM Eastern US Time)
on WBCQ 7.415 MHz, short-wave
and simulcast live on the Internet at: http://www.HalTurnerShow.com

THE FIRST CALLER FROM EACH COUNTRY OUTSIDE THE USA WHO TELEPHONES THE HAL TURNER RADIO SHOW AND GETS ON THE AIR TO EXPRESS AN OPINION ON ANY OF TONIGHT'S TOPICS, WILL BE REWARDED WITH A $25 AMERICAN EXPRESS GIFT CHECK!

Tonight's topics: Jared Taylor of American Renaissance
exposes a grotesque scam by the US Dept. of Agriculture to pay billions to black farmers for "racism."

Also, hear about . . . . .

a) Mexicans in Los Angeles driving around with new, L.E.D. signs in their cars which read "F*ck You, this is still Mexico;

b) Anger over Christian Prayers that were given at the Inauguration of President Bush;

c) How homosexuals continue to prey on innocent children for their deviant lifestyle

d) The ongoing invasion of illegal and violent immigrants into America and other nations around the world.. . . . . and much more!

The TOLL-FREE Number to call in the US and CANADA to be heard on the air is 1-866-TALK169

Those OUTSIDE the US and Canada can call COLLECT - we will pay for the call! Tell your local telephone company that you wish to make a collect call to the United States at Country Code 1, then 732-471-1713.

Remember, the show begins at 8:00 eastern US time, that's 2300 UTC Monday.

Tune-in 7.415 MHz shortwave to listen and be sure to call-in first from your country!

http://www.HalTurnerShow.com

Roy Cunningham - CatPig Studios
Everything You Need for
Commercial and Private Broadcast
Production, Presentations, Original
Music Composition

I did a lot of research on this site and others a while back finding out what others think, use and do as production people in radio.

I'm just a blues guitar player but I've got over twenty pro years in recording, mastering, etc.

Short, short short story ....

I love community radio, couldn't make a living at it, got a job as an account exec, did all my own production in my home, sold more clients on good production than anyone else could, started helping other reps, got into imaging, promos and finally production director.

I'd love to establish a two way conversation link with those of you working as production directors , et al.

I do have some of the original emails I sent and recieved from participants of this group although many were lost when I upgraded my current home system.

I stll do the important stuff at home since our stations are not fully tweaked yet. Getting there but .....

I live work, (comma left out on purpose) in Astoria, OR for New Nothwest Broadcasters. We operate seven stations. I am partnered with an AM prod director that has a great voice and lots of talent.

I prefer to use the following for production :

P3 - 550mhz
256 RAM
30gig 7200 RPM Fujitsu HD
17" monitor at 1280

Cakewalk 9.03 (soon to be upgraded to SONAR)
ACID 2.0
S.A.W.
Alesis QS6
KORG X5DR
SM 57 (Yes !!!! and it sounds great vintage: '78 and lots of road time)
Alesis Nano Compressor

Alesis Quadraverb+

I've been trying to get some material out for other people as well. It's been quuite hectic during our new build-out and my sales obligations. I'm told my work sells client product so I do want to get it into other markets. Boss is cool with that.

Thanks
Roy

This is common these days. The FCC doesn't seem to care. Here in Orlando, the
local occupant of 1220 routinely runs 1KW fulltime...even though they're
limited to flea-power at night (50 watts or so.)

Geez, you'd think this would at least get some FCC action...given that 1220 is
a Mexican clear and all. Then again, what do you expect in a market where a
high-power pirate on 95.9 has been operating for well over a year now, running
paid spots and airing uncensored rap music.

Nobody cares.

What exactly did the contract say? If it is not specifically stated in the contract, you have no reason to believe that it exists.

> When I was terminated from KMXL I was earning less than $2.75 an
>hour.

Isn't radio covered under the minimum wage law?

> Petersen blantenly broke the termination clause in the
>contratct, and then preceded to use the stations electronic funds
>feature to withdraw money from my checking account.

Unless there was a reason stated, I don't see how this could be done. Did you file a charge with your bank? Illegally withdrawing funds is a real nasty matter.

> A clause in the contract stipulated that all contract disputes
>would be resolved in Jasper county court, where Petersen has lived for
>30+ years and his attorney has practiced over 20. So I filed a small
>claims case. Petersen presented no evidence in response to my 10+

>he would render judgement within 2 weeks.
> 2 months later after sending a follow up fax to the judge, he
>found for the defendant. The "good-ole boy" system prevailed .

Without seeing the contract, no one else can pass judgement on this.

> What are my options now? I have a little over a year left in the
>no-compete clause.

I would say get a lawyer. I'm not a lawyer myself but from what you say, it sounds like something you'd want to pursue. See if you can find someone who will take the case for a percent of the judgement.

Well, I caught 990's 11:00 AM ID, and they're still WHOO. The ID
was done by a bunch of kids, most likely from Radio Disney.

I then jumped over to 1080, and they also ID'd as WHOO after the
local weather.

So now we have Two stations in the same market using the same legal
ID.

I worked in Central Florida in the early-mid 70's and my best memory of 540 kHz was also when their studios and transmitter was next door to Cypress Gardens.
They were playing Top 40 at that time and using PAM's Rock of Chicago jingles. The legal ID was "WGTO-Cypress Gardens", but I always wondered how a tourist attraction became a city to which 540 kHz was licensed. They really did sound good, but they signed off at sunset...

: >network great goes more to the men and women who hired them than to
: >the individual performers.
:
: Indeed. But even with a focus on talent, the first great CBS star
: wasn't even Edwards; it was Jack Benny.
:
Well, it's a point that's well-taken, because the acqusition of Benny
by CBS did mark a turning point in the network's attempt to pass NBC
in the ratings. As Rich Wood noted, WIlliam Paley was a _very_
competitive and combative businessman. The thrust of his drive to the
top of the network ratings heap came in the 1947-49 period.

So, once again we go down memory lane: The seeds for victory over NBC
were really planted in 1946 when CBS, in a revolutionary move for the
day, decided that it would produce and own its entertainment shows
rather than simply air, for pay of course, whatever the ad agencies
brought through the door.

CBS production executives such as Harry Ackerman, Cy Howard, Hubbell
Robinson and Irving Mansfield joined the network and before long, CBS
was producing "Our Miss Brooks", "My Friend Irma," "My Favorite
Husband," "Life with Luigi" and "Arthur Godfrey Time"--all were
successful.
But still, CBS had only two shows in the top ten in 1947.

Then came the talent raids. The network signed Gosden and Correll and
thus picked up "Amos and Andy." Next to come to CBS was Jack Benny
and then Bing Crosby, Red Skelton, Burns and Allen, and Edgar Bergen
(complete with puppets).

The talent was lured by a CBS package that called for the incorporation of the performers who would then sell the show scripts and characters to CBS for big bucks _and_ get regular salaries from CBS--the deal beat whatever NBC was offering at the time. The scheme was ruled illegal by the IRS but that decision was overtuned by the courts. By the end of 1949, CBS had twelve of the top fifteen network shows.

It was star power that made CBS triumph over NBC, and NBC radio never really recovered. NBC did, however, manage to hang on to its remaining major star, Bob Hope.

I remember (Yes, I'm that old), listening,, probably in 1948, when the network system cue was, for at least a few months: "This is CBS, the STARS' address"--both crowing about and promoting the results of the coup. Which reminds me of listening to Authur Godfrey Time one morning, probably in 1950-51, and hearing Godfrey beefing about having to change the station break cue. As you may recall, Archie Bleyer's band would play a bit of "Seems Like Old Times", and Arthur would say, "This is CBS, the Columbia Broadcasting System." Starting on that day, it became, "This is the CBS RADIO Network." And that, I think, was a significant clue that the end of big-time network radio was just a few short years away. But that's another story.

>of any dj trashing?

I've usually found there are two sides to every story. However, it's incredibly dangerous for an employer to badmouth a former employee. The owner is stupid is he's doing such a thing. That's why employers are reluctant to give recommendations or answer questions from prospective employers or headhunters. The risk of a lawsuit is very, very high.

If I were the DJ I'd file suit against the former employer. If the stuff is in writing on websites or newsgroups a hungry lawyer should have a field day. The DJ might end up owning the station.

>Paley, et al., would have treated news as a cross-promotional
>vehicle the way the current ownership of CBS does.

The "wall" between entertainment and news was never absolute in Paley's day. Ed Murrow himself did "Person to Person", a celebrity interview/visit show. Walter Cronkite, before he became the Evening News anchor, read the news on the network's morning show and then "discussed" the news with a puppet lion named Charlemagne. "60 Minutes" has always combined hard news with celebrity interviews and the like. And so on...

Depending on state law, the contract (and the no compete clause) *may*
be unenforceable. Such clauses must be reasonable in time and in
geographic scope. That is, the provision may be void as against public
policy because not allowing you to make a living in your field of work
could cause you to end up on the taxpayers' roles, i.e., welfare. The
hourly amount you quoted is less than minimum wage. Has the station
violated the law? Withdrawing money out of your checking account could
be a criminal offense in your state. Talk to your local district
attorney.

Most of these questions are state specific, and only a lawyer in your
state can advise you on the next course of action.

As far as him "trapping" you...you could make more money at McDonalds.
It's your choice.

Jim--

Drew was referring to the Tampa market when he made his accusations concerning listener confusion. WFLF's signal is loud and clear in downtown Tampa and at least as far south as Tropicana Field on its daylight pattern. I wholeheartedly agree that CC is running a risk of
being delisted in Tampa, but it will have no effect on the Orlando book at all.

The only problem with WFLF's signal in the Orlando Metro is at night. As I remember WFLF didn't
have a great signal north toward Altamonte Springs after dark and as far north as Heathrow or
Deltona or east out toward KSC they just disappear.

Tim

Sorry, Jack Benny came late to the party. He was on NBC until 1948.

It's hard to imagine but prior to World War II, CBS was very much a dark horse network. NBC's position was not unlike Microsoft's in high tech today. It owned the dominant network -- and a second network. Even Mutual had greater reach than CBS in the 30's. Paley kept the network alive (while Douglas Edwards was still at WXYZ). He used interest in news during World War II to carve out a niche for his network -- but it was the talent raids (and the government break-up of NBC) that moved CBS to parity and then preeminence. At the point, CBS de-emphasized the news division.

If anybody deserves co-billing with Paley, it is his top entertainment and programming executives, people like Jim Aubrey who built and established stars and programs that still dominate the Nick-at-Nite and TV Land line-ups.

Guess they learned from Clear Channel and WFLA :-)

As an aside, I believe the pending call letter change on 990 will leave only one Orlando station with it's original call letters & dial position...this being WDBO/580.

Sounds to me like you need a good contract lawyer on your side. Go for a change of venue, get the contract "shredded", seek actual and punitive damages, demand a jury trial, then settle out of court. Buy a Porsche and make a beeline for civilization. To avoid getting screwed in the future, get out of radio... the corporate guys have ruined it.

The 1190 Day site is west of Dallas in Irving, TX. Take I-30 west from Dallas, after you cross Loop 12, look to your right and you'll soon see 4 n/s towers. Exit right at MacArthur which should take you to the site, near the Irving Dump.

The 1190 Night Site is about 25 miles east of Dallas. Take I-30 east, you'll eventually cross Lake Ray Hubbard and come into Rockwall, TX. Look for the FM 549 exit and go right. You'll see the towers ahead...they're close to the FM 549/SR 276 inteersection.

As I have related before at one time all 12 towers were lit. Today only 6 of the 12 blink at night.
At the moment they are in an LMA with Clear Channel and are running Fox Sports Radio.

Interestingly 3 communications towers have been built about 2 miles away to the west and are in the main lobe of the night site. I understand that they do distort the pattern and they apparently are not detuned.

If so, you could say that 1190 has a 15 tower night site!

Situations like this are precisely why I decided to leave radio after 16 years. Life's too short to waste, dealing with crooks, cheats, and liars. Radio management/ownership seems to have more than their share of these types.

>Hey Drew...If you are in the path of the main lobe of WQTM (which all of
>Orange County and Metro Orlando is), they have a killer signal.
>At night they shoot the equivalent of almost 400,000 watts to the east
>northeast into downtown Orlando.
>For building penetration and overall performance, I would much rather have
>WQTM's 50,000 watt signal than WDBO's. 5,000 watts.
>WDBO's nighttime pattern, while fairly loose for a class B, is still
>restrictive to the north of Orlando. And 540kHz is a much quieter frequency
>than 580kHz.

True. But 540 has serious nulls to protect 540/Columbus, GA and 550/Orange Park, FL. This creates "dead spots" in parts of town. I hear them on my car radio, so I know they're there.

Also, you have to remember that 540's transmitter is much further out than 580s is.

540 is much stronger in the West Kissimmee/SW Orange Co. area. But 580 is much stronger in the Apopka/NW Orlando/Winter Park area, due to the nulls. Over where I am (E. Orange Co.), the signals are about equal.

>You also mentioned earlier that people would get confused by this move. To
>the best of my knowledge, WFLA doesn't have any presence in the Orlando and
>has never shown up in any of the Arbitrons. I know WFLA's signal is audible
>in Orange Country, but there doesn't appear to be a significant (or
>insignificant) listener base. So what would be confusing to listeners? As
>for getting delisted by Arbitron, what would the violation be?

No, no. The confusion is not that WFLA can be received in Orlando. (For the most part, it can't be.) The confusion is just the opposite...that WFLF can be received very well in the Tampa market. Now, Tampa Bay listeners have two stations calling themselves "WFLA." How does Arbitron know which one they are referring to?

writes:

>By now we've established that 540 in Orlando is
>legally WFLF at the top of the hour but using WFLA as
>their identifier elsewhere. I don't know that there
>would be real confusion.

This is questionable under both FCC and Arbitron rules. Even if it's
technically legal with the FCC, I believe this is dangerous for CC with reagrds
to Arbitron. Since both 540 & 970 penetrate the Tampa market, audience
confusion is unavoidable. Since 970 is always a big ratings winner, it would
REALLY suck for CC if 970 was listed below the line in the next sweep, wouldn't
it?

>My theory for what it is or
>is not worth is that CC wants to make "WFLA" a
>"brand-name" for News Talk in Florida, like their Mix
>and Kiss brands nationwide. I wouldn't be shocked to
>hear Jacksonville, Miami and Tallahasee get "WFLA's"
>(with different legal calls, of course).I remember
>when they tried that sort of thing in Cincy when Jacor
>bought WKRC as its second AM. They tried to market
>them as "700, WLW", and "550, WLW". Didn't really
>work.

This is what you'll see soon...just more cookie-cutter crapola, distributed in
a "one size fits all markets" manner. Such is the programming philosophy of
large radio conglomerates.

>Coverage-wise, I remember 540 as the Cypress
>Gardens station, in fact their studios were right
>there, and they were playing country. They reached
>most of Florida and some of Georgia, but had very low
>power at night. I would imagine they had to tweak the
>pattern quite a bit to be the move-in to Orlando that
>they are now.

This happened in 1989, when WGTO was resurrected and moved to Ocoee.
Relicensed to Pine Hills. Format was Oldies. I was offered the 7-Mid slot
there by PD Terry Mason.

The current pattern of 540 has MANY nulls, day and night. It must protect XEWA
at night, of course. In the daytime, it protects the 540 in Columbus, GA, and
the 550 in Orange Park, FL. These required nulls produce "dead spots" in parts
of the Orlando metro. Yesterday, as I was driving in the NW Orlando/Winter

Park area, there were several times when the signal would become distorted and sound out-of-phase for a few seconds as I moved.

But hey, they can brag to the advertisers that they have "50,000 watts", so I guess that's what matters. Nevermind that WDBO's 5,000 watts on 580 has better overall metro coverage.

I didn't get to follow the entire thread about NO COMPETES, however I have extensive experience fighting one. I'm not sure about Missouri law, but in Minnesota (where I was when an owner tried to enforce on one me) the law states PLAINLY that a no compete clause MUST be compensated...in other words, it was not worth the paper it was written on unless the employer attempting to enforce it was compensating you for NOT taking a job in the same market, and that the compensation must be AGREED TO prior to the signing of the contract including the clause OR they must give you your FULL salary AND benefits, or they cannot enforce it.

Another way around no competes is to live in a "Right to Work" state...no competes are void, but there are also serious drawbacks...you can be FIRED WITHOUT CAUSE in a "Right to Work" state...

Good luck

Rick Charles

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Is there anywhere I can find ideas for Non Traditional Revenue for a very small market station. I don't mean website tie-ins or extra promos for coop advertising, I wan't to know if any station in real small markets have any cool ways of getting in some extra dollars. I hear of one station that recorded tapes of kids stories to play on long journeys and sold them. Any more ideas or url's?

ONE WORLD-ONE INTERNET-ONE WEBPAGE. NUCLEARWARRIOR-DOT-COM WILL CHANGE THE WAY YOU THINK OF MUSIC. THIS IS WHERE THE ROCK-N-ROLL ERA ENDS--AND THE =NUCLEAR WARRIOR= ERA BEGINS. IN 1999, =NUCLEAR WARRIOR= OPENED AT THE PRODUCER'S CLUB THEATRE. PRODUCER-COMPOSER =SCOTT LIFSHINE= TEAMED UP WITH DIRECTOR =JOHN KING= TO CREATE AN "EVENT" THAT STUNNED PATRONS AND CRITICS ALIKE.

The Show was based on =Lifshine's= composition, NUCLEAR WARRIOR-which prompted publications such as Night Howl to dub NUCLEAR WARRIOR "the top song of the Century." New Jersey based EC ROCKER insisted that NUCLEAR WARRIOR would "incinerate the record industry."

Join the millions of fans who are part of this Historical Moment in the History of Music. NUCLEAR WARRIOR-DOT-COM-Redefining the field of Intellect as it pulls the World into a startling New Epoch. Inquiries Welcome.

One World -- One Internet -- One Webpage. NUCLEAR WARRIOR-DOT-COM-It'll change the way you think of -- ^everything.^

:sigh:

Well this will be broadcast Soon Enough ;-) I'm just SO Musically Talented, now aren't I ;-)

And don't forget this has Nothing to Do with my World Exclusive on California Jam either :o

Ah, the Glory, the Glory now Raddion. The unabashed & unavoidable GLORY of "the only music that matters" etc. Where does this Post end? Nowhere I suppose...

Scott :-)
Heck I TOLD you I'm "the biggest movie star in the World" and that "the Devil's on his way out" now DIDN'T I! :o

:sigh:

Since almost every radio station, even the tiniest, is owned by a
corporation, I think you need to further explain which corporate guys
are the bad ones.

A corporation is simply a legal structure.

While actual police records will show child sex abuse is far more prevalent among heterosexuals (there are more of them) than homosexuals, it isn't the kind of information that instills fear and raises money for preachers, politicians and talk show hosts.

How are you going to convince an admitted heterosexual that heterosexuals are out recruiting their children. It doesn't work when you're a member of the "offending" group, yourself. It's much easier and has more fear potential to use a group unlike oneself that you don't understand and make them targets for fundraising uses.

These are terribly old tactics that are alive and well in the 21st century. I guess they still work.

Former radio person Drew Durigan writes, in part:

> "... Tampa Bay listeners have two stations calling themselves "WFLA." How does Arbitron know which one they are referring to?"

Arbitron has long-standing procedures to sort out something like that.

As such, it's not much different from two stations saying "Mix" or "Kiss" or "All your soft rock favorites from the 60s, 70s, 80s, 90s, and beyond, with no rap, and without all the boring stuff that puts you to sleep, and hours of commercial-free music so that you won't patronize our advertisers" or any other slogan (sorry, "station name"). Or two stations on the same frequency, for that matter.

Repeat: Arbitron has long-standing procedures to sort out something like that. Nothing prohibits it. It's not a problem. End of story. Don't lose any sleep over it. <smile>

: William Paley did not was not the founder of CBS. It was Major
Andrew White.
: Mike

Well, not exactly. Major White was an announcer who, together with a guy named George Coats and a talent agent named Arthur Judson formed what was called United Independent Broadcasters, a precusor of CBS. It did not do well. But the Columbia Phonograph Company invested in United, but insisted that the company's name be changed to the Columbia Phonograph Broadcasting System (CPBS?). In 1928, thee Paley's (Sam and son Bill), after some a financial machinations, assumed sontrol of United and it's Columbia Network. So, you're right, Paley technically didn't "found" the company that became CBS. What he did was build it.

WUMB Boston (http://www.wumb.org) calls itself Folk Radio and plays a mix of acoustic and electric folk from 6 a.m. to around 8 p.m. At night, they are "urban folk," meaning blues, jazz and old soul music.

Their streaming provider went belly-up earlier this week, so no audio since Tuesday. But a message on the site says they're looking into a streaming MP3 feed that they'll originate themselves, possibly as soon as today (Friday). Keep checking the Web site for info.

Another possibility for acoustic music is WFUV New York, www.wfuv.org. Their daily morning "City Folk" program usually has quite a bit of acoustic music.

If you want to attribute the success of CBS to any one show it would have to be the one that some 40 million listeners tuned in to, the show that influenced dinner hours, interrupted the showings at movie theaters, and president Coolidge did not like to be interrupted while the program was on. Amos 'n' Andy, which began as Sam 'n' Henry on WGN in January 1926, then moved to WMAQ in March of 1928 as A&A. WMAQ became the Chicago outlet for CBS.

Only an out of market staiton is below the line. In the case of the real
WFLA, it is home to the market. Additionally, unless the mention is
"WFLA-970" the ascription rule will give all WFLA mentions to 970, as there
is no preexisting cume in the MSA to give ascription status to 540.

When I was doing fill-in at KSDO in San Diego back in the 70's Gov. Reagan had cut a couple of Armageddon announcements. They were kept on carts in the control room. They were wrapped to prevent accidental use & had warnings on the labels. As I recall one annct was to warn Californians to react quickly to a pending nuclear strike. The other was the real downer. I remember Reagan saying something like "Our worst nightmare has come true".
Anybody remember these things...I'd love the have copies!

: RealAudio at 32kbs. Really sounded great.

: TNX de Arupta

We had the pleasure of traveling to LA and then the redwoods this past summer for a graduation. I thought one of the high spots on the dial was KLAC. Cannot remember the last time I heard Frank Ifields "I Remember You" on the radio. They played alot of music we no longer hear in Chicago. I listened to them from time to time on the internet here. So sorry to hear they are going talk.

I thought so much of the music in the 50's and 60's was so sweet and reminescent of a less congested lifestyle. My mother thought the same of music in the 20's 30's and 40's. Sometimes I catch part of "Blues Before Dawn" Sunday 12:00 AM on WBEZ our NPR station. I like music from her era too. Dick Biondi has an oldies countdown show here on WJMK that is probably the most worthwhile oldies show on the air here. Last sunday he did the top 25 form Feb. '64. Many ineteresting bio's, news and movie bytes, group histories and some commercials. This is a far cry from thier playlist. The show is Sunday evenings from 8:00 to 10:00.

Another station I found recently is AM740 from Toronto. Canadian adult contempory. Reception can be excellent here for hours and then just disappear. There is still good music being written today. I heard Dian Womac's (sp?) "I Hope You Dance" this morning on my way in and will certainly buy her album.

Radio has to answer to the bottom line. I just hope much of the music from the past century will be remembered in centuries to come.

I forgot to mention the other reason for Arbitron putting a station below the line: methodology related on-air mentions, such as a talk show host discussing Arbitron on the air (Jackson, TN, this book) or promos that use Arbitron terms to encourage listeners to write down listening. This is detailed in the PDF file at http://www.arbitron.com/radiosurvey/ratingdistortionandbias.pdf and is a rather interesting discussion of what Arbitron holds to be unacceptable bias-prone on-air activities.

Not on your life. They tried to buy WLVU 97.1 FM in pasco county (north of Tampa). They turned Cox down. So Cox hired a broker to buy the station, under the pretext that that the format and personnel would remain the same. He turned around and sold it to Cox, who fired everyone , changed the format to oldies (which died after one year) and moved the whole shooting match to Tampa.

No, I dont work for an outfit like that. I'd rather be unemployed.

There has been a lot of talk in some circles about self supporting being more earthquake resistant than guyed. I know that public safety agencies on the west coast are taking that to heart. I would like to see someone try a skirt feed on one of those skinny monopole towers like cellular is using. Those are fairly inexpensive. The skirt should give it the electrical equivalent of a wider cross section. You would want to take extra measures to ensure that the sections are electrically bonded. It would be interesting to see how that would perform.

>What he did was build it.

Was he not already a sponsor, through his La Paloma Cigar Company? So
Paley really assumed control over this entity through multiple paths.
Advertisers controlled content almost completely in the earliest days
of United States broadcasting, so what he really acquired, was a
delivery medium.

From: http://www.ukradio.com/news/

Date: 9/2/01

The service currently transmitted via the 19.2 East - Astra satellite will almost certainly cease on the 31st March 2001. This is the result of Challenge TV's uplink which Caroline uses, ceasing uplinks on that day Mark Stafford of Radio Caroline, provided the following information:

We were of course aware that at the 30th June 2001 we would have to look at an alternative broadcasting future, but that date has been brought forward. In our dreams that future would be an analogue service on 19.2 East and a digital service on 28 East. But dreams do not pay bills. The reality is that we have to move to 28 East to reach the majority UK audience. There are 4 million UK dishes on 28 East.

By April this is likely to reach 5 million. By this summer only a few thousand will have dishes left on 19 East.

Over the past 6 months we have researched transponder costs and we have been

quoted £100,000 a year for a continued analogue transponder for 7 days a week, 24 hours a day. That is over 3 times what we are paying now.

The truth is currently even digital on 28 East will be difficult for us to achieve financially. Digital and analogue is totally out of the question. Unless you can find us an analogue transponder on 19 east at £500 a month, with no attached costs ! Even a Sirius analogue transponder is £2500 a month

and only Scandinavians have their dishes on that !

It is better for Radio Caroline to be ahead with new technology by being digital than to stay analogue and to sit and wait for the listeners to go digital and week by week to see the audience reduce.

I am sorry to bring the bad news, but please remember again, we have looked at every way there is to remain on analogue and to reach the UK digital audience. It can't be done. Currently, we are fighting for a deal to continue in digital at 28 East. That is far from certain, in the middle of last week it looked as if the costs of this were too high.

Anyone recommend a decent receiver in the UK?

Anyone agree with this quote from a recent article:

"DAB is the broadcasting equivalent of Concorde- way ahead of its time and convincingly elegant, yet commercially bananas"?

All comments would be most appreciated, thanks.

His hit and run accident on the Left Coast (reported on the local news?) wouldn't ever have come to my attention living in Madison, WI if Ira wasn't such a personality when he has his very popular talk show there. I wasn't one of his listeners, as I was busy at the University of Wisconsin. I spent three years at WTSO, but even Ira's replacement (Ed Ames or somesuch?) had moved on when I was there.

I still have that other "dream" where he appeared on Jeopardy.

alt.radio.international,alt.radio.uk,alt.satellite.radio.europe,rec.radio.broadcasting,uk.media.radio.misc,uk.media.tv.sky,uk.radio

9 Feb 2001: Radio Caroline may be forced off the air again at the end of next month, due to the mass migration from analogue to digital satellite reception in the UK. Currently the station broadcasts at weekends using an analogue transponder on the Astra satellite at 19.2 degrees East. But Challenge TV, on whose uplink Radio Caroline depends, will move to digital after 31 March. Radio Caroline's Mark Stafford says that the station has been quoted a price of £100,000 to continue using an analogue transponder, over three times what it presently pays. But in the UK, most of the potential audience has now migrated to the digital platform at 28 degrees east. This, too, looks as if it will prove too expensive for the beleaguered station.

(c) Radio Netherlands Media Network

http://www.radiocaroline.de/
Radio Caroline broadcasts via Astra 1C satellite, transponder 35, 10.994 horizontal (behind TV Travel Shop/Challenge TV - on most sets this is on channel 35), audio 7.38/7.56, 7 days a week

http://www.radiocaroline.co.uk/
Caroline was conceived to break the UK radio monopoly and help young artists and bands advance their careers. When I saw the sometimes brutal lengths that the establishment and authorities were prepared to go to to silence Caroline, the station evolved to become a struggle of the individual or group of individuals against the system and this continues to be so.

It is amazing and sad that not once in 33 years has anyone in authority come to me to say 'hey, you guys are not so bad, why don't we talk this over'.

At some point Caroline took on a life force of its own, twenty years ago I told a journalist that I don't run Caroline, Caroline runs me. This links in with my views on Loving Awareness which I will just describe as a nice way for people to live and to treat each other.

Another thing that made me sad was when someone very close to me said that I had wasted my life on Caroline. I don't think that creating something that has provided harmless free enjoyment for millions of people for three decades could really be described as a waste. It probably represents the most useful way I could have spent my life.

Caroline is like a big family and anyone can join. If this website inspires you I hope you will join us and help return the Old Lady to the prominence she deserves. Many people have laughed at me over my Loving Awareness ideals, but that's OK. The fact that Caroline still survives at all, and is

seemingly indestructible, proves to my satisfaction that L.A. exists.

Ronan O'Rahilly - Founder of Radio Caroline.

1510, licensed to San Rafael, has a recently-constructed four-stick array on the roof of a warehouse at the foot of West Grand Avenue in Oakland. I don't know about the ground.

I think the power is now 2500 watts (It was 1KW, non-directional when it was in San Rafael.).

Puts a city-grade signal into the C.O.L., but now does well in S.F. and the upper peninsula, too.

A small FM radio can cost £4.99. A small DAB radio starts at £499. Once the price gap is bridged, then DAB will be viable for mass sales.

Regards
Glenn....

I cannot recommend this too highly, wonderful stations in superb digital stereo on a radio costing less than £100! Try the Hitachi (there are 3 other makes available worldwide):

From: http://www.worldspace.com

With a slender, upright design the Hitachi WorldSpace receiver conserves on space. In addition to WorldSpace programming, it receives AM, FM and SW broadcasts. It has a 1-line, 8-character display area, a built-in monaural speaker, connectors for stereo output, and presets for 10 channels.
Order Yours Today

Click for "Printer-Friendly" Setup Instructions
Standard Features
Portable, battery powered (4 D-cell batteries) with AC adapter
Built-in monaural speaker (0.5 Watt output)
Stereo headphone socket
Stereo line out connectors for integration with your stereo or home theater system
Built-in easy-to-aim antenna
AM, FM, and 2 SW band in addition to WorldSpace service
Decryption and narrowcast capability
Program selection by language and category
10 presets and last station memory
1-line, 8-character LC display
Port for easy attachment to the WorldSpace PC card to enjoy multimedia services.
Easy to setup and operate
Basic Setup

Ensure that the receiver is plugged in. Time will be displayed.
Press the ON/STANDBY button on the middle right of the unit. The ON/STANDBY indicator light will turn on.
If the receiver is set to any of the commercial bands (FM, AM, MW, or SW), press the WS/RADIO button to tune to the WorldSpace band.
Adjust the antenna to the proper orientation.
The WS antenna signal indicator will show up to ten bars. Position the antenna so that the maximum number of bars is shown on the display.
Basic Operation

After turning on the receiver and positioning the antenna, the first WorldSpace broadcaster should be audible.
If there is adequate signal strength and no WorldSpace audio is available, search for the broadcasters (see Search Mode section).
Press Broadcaster/Frequency Up (BC/FREQ UP) or Broadcaster/Frequency Down

(BC/FREQ DOWN) repeatedly to select the broadcaster:
* BC/FREQ UP to move up 1 broadcaster
* BC/FREQ DOWN to move down 1 broadcaster
As the BC Select buttons are pressed, the broadcaster label is displayed on the screen.
For each BC, the Service Channel programs (SC)s are shown. Press the Service Components Select UP and DOWN button to select the SC within the BC.
Search Mode

This section does not apply if after completing basic set-up and basic operation you are receiving WorldSpace audio content. If no broadcasters can be heard and the display window shows an adequate signal strength, please follow these instructions:

Press the mode button; "MODE" is displayed for 10 seconds.
Press the BEAM SEEK button while "MODE" is lit. "SEEK" flashes and the unit searches for a receivable beam. When the unit receives a beam the beam name appears for 2 seconds then the unit begins to search for the next beam.
If the unit cannot receive any WS beam "NO BEAM" appears in the display window.
If the search is successful, the first broadcaster will be audible and the rest of the broadcasters will be in memory. Follow the directions in the Basic Operations section to manually tune through the broadcasters.
Reception: Line-of-Sight (LOS)

Line-of-Sight (LOS), refers to uninterrupted or "obstruction-free" sight to the WorldSpace satellite. LOS is a very important precondition for receiving any satellite service.

How do you obtain Line-of-Sight (LOS)?

Very simple - your reception antenna (e.g. patch antenna, high gain antenna, dish, ...) must have direct LOS to the satellite - with no obstructions such as trees, houses, bridges or the like.

Imagine the satellite as a point in the sky in the direction determined by consulting the antenna pointing guide. Check for anything obstructing clear line-of-sight. Avoid or remove any such objects.

Also, consider that objects may move or be moved in front of your reception antenna without your control, such as a car, bus, or truck. Therefore, carefully select the location for placing or mounting the antenna. In general, the basic guidelines for LOS of TV satellite reception systems apply to the WorldSpace system as well.

Reception: Indoors

For in-building reception of the WorldSpace signal when there is no line-of-sight (LOS), an antenna must be aimed out of a glass window, or must be placed outside. WorldSpace offers extension cables and other inexpensive accessories to enable LOS reception in this situation.

Reception: Interference

Interference - what is it and what will cause it?

Interference of the WorldSpace signal is caused by one or more unwanted signals near the WorldSpace frequency. These disturbances may make reception of the WorldSpace signal difficult. If you suspect that your WorldSpace reception is suffering from interference, there are solutions. However, it is recommended that if possible you contact your WorldSpace receiver dealer to discuss the problem.

To eliminate interference, WorldSpace provides two solutions. The quickest and most efficient solution is the interference filter. A special antenna with higher antenna gain may also be installed. With the WorldSpace Interference Filters the receivers can easily receive and decode the program signals.

A filter and a high gain antenna, available through your local WorldSpace receiver retailer will eliminate any interference.

WorldSpace Frequency Band

The WorldSpace digital satellite system broadcasts in the so called "L" band frequencies (1467-1492 MHz), which was allocated for this Direct Audio Broadcast Service at the World Administrative Radiocommunication Conference of 1992.

LOL! :-) And now that Dubyah's in the WH, all the D's know how the
R's
felt for the last 8 years!

Anybody remember the mistake attack message that went over UPI
teletype in
the late 1960s? Early Sunday morning. Ten bells. Somebody at UPI put
the
wrong paper tape into the transmitter. Fortunately it was at the same
time
the regular weekly test was supposted to clear, so most people
percieved it
as a mistake.

777. KVOD, Denver Fades Into History

Newsgroup: rec.radio.broadcasting
Date: 2001-02-12 05:17:22 UTC
From: n0jaa@aol.common
Message-ID: <t8esf2s1tn1g36@corp.supernews.com>
Source record: 15789

Another great, historic radio station fades into history: KVOD in Denver. I remember when this station was on FM for many years. They recently sold their FM studios to another station and went to AM. Now it seems that they have sold out again, but this time for good.

Here is the article from Popular Communications.

Paul.

KVOD, DENVER FADES INTO HISTORY
By Bruce Conti

Classical music afficionados are a dedicated group of listeners. Even AM radio can attract loyal listeners. WQXR New York at 1560 kilohertz used to attract a large, national audience with its clear channel classical music broadcasts. The once grand state-of-the-art WQXR studios could accomodate a 52-piece orchestra. When WQXR announced that classical music was coming to an end on 1560, there was a huge campaign mounted by listeners to retain the format.

Now history repeats itself in Colorado, as unfortunately the supporters of KVOD, Denver, at 1280 kilohertz, their loyalty wasn't enough. The public outcry was so great upon learning about the pending sale of the station that program director Jim Condor was moved to write an open letter to KVOD listeners.

"I am writing this 'form e-mail' in response to questions and to thank you for your overwhelming outpouring of kind wishes and unforgettable memories. The situation is just this: Latino Communications is buying KVOD. That includes all the assets: the call letters, the dial position (1280), various equipment, and real estate. Zee Ferrufino, President of Latino Communications, has assured us that he will indeed flip the format to Spanish. Mr. Ferrufino has promised to donate the call letters and the library of thousands of CDs to Colorado Public Radio (KCFR, 90.1 FM).

(Note: KCFR is now Denver's only remaining classical music station. -- Paul.)

"Many of you have expressed concern about the 'reasons' for the loss of KVOD. The top reasons, naturally, have to do with money. Stations in Denver are selling for tens of millions of dollars. KVOD was no longer viable on AM to bring home the bacon for the large corporation that owned us. As a result, we were systematically phased out with budget cuts and neglect. We bravely hung in there despite the attempts to bury us much earlier. That is why we thank you for your stedfast support through the tough times... on behalf of the entire staff of KVOD, thank you for your well wishes and your concern."

In its final days KVOD carried the Beethoven Satellite Network while the transition to Spanish programming was completed. KVOD will be sorely missed by Denver listeners.

Actually, up until roughly 1970, they signed off at Sunset. I was working part time as a tech at a little tiny Clearwater AM-FM combo, when word came around that WDBO would be getting limited night time coverage, and would like news feeds if anything significant happened...

Seems to me that would have been around 1969....

"Brad Lovett" <bluvit@yahoo.com>

| By now we've established that 540 in Orlando is
| legally WFLF at the top of the hour but using WFLA as
| their identifier elsewhere. I don't know that there
| would be real confusion. <snippage>
| Coverage-wise, I remember 540 as the Cypress
| Gardens station, in fact their studios were right
| there, and they were playing country. They reached
| most of Florida and some of Georgia, but had very low
| power at night. I would imagine they had to tweak the
| pattern quite a bit to be the move-in to Orlando that
| they are now.

> 1996)? It was of unusual architecture, and built in 1927-1928 when the station
> was
> owned by Samuel Insull's utility conglomerate.

If you can find it there is a book that has a lot to say about WENR and early Chicago radio...including a photo of Ransom Sherman and Everett Mitchell standing in front of the new WENR transmitter (50,000 watts...870 or 1050 kc? that was in dispute at the time) building for its dedication.

The book is "Radio's Beautiful Day," "...an account of the first five decades of broadcasting in America, based on the experience of Everett Mitchell."

Everett Mitchell was the announcer who weekly told the nation listening to the National Farm and Home Hour, "It's a beautiful day in Chicago...."

It is an interesting book, if you can find it. Probably now out of print.

<<
1510, licensed to San Rafael, has a recently constructed four-stick array on the roof of a warehouse at the foot of West Grand Avenue in Oakland. I don't know about the ground.
>>

Counterpoise.

>>
I think the power is now 2500 watts (It was 1KW, non-directional when it was in San Rafael.).
>>

8 kW.

>>
Puts a city-grade signal into the C.O.L., but now does well in S.F. and the upper peninsula, too.
>>

Sends about 35,000 watts, equivalent, towards the Duane Garrett Memorial Tower (the North tower) of the Golden Gate Bridge.

Check-out the pattern quite carefully. The number of stations protected by this operation is truly astonishing:

1480 (Concord, CA, currently dark),
1490 (Petaluma, CA, King City, CA and South Lake Tahoe, CA),
1500 (San Jose, CA),
1510 (Fresno, CA and, during critical hours, Spokane, WA [Class I]),
1520 (Hollister, CA)
1530 (Sacto, CA [Class I])

Actually a flattop, not a dipole.

In a dipole, the horizontal portion radiates and the vertical portion
does not.

In a flattop, the vertical portion radiates while the horizontal portion doesn't.

To put a finer point on it, it's on a building at the corner of Washington Blvd. and Oak, visible from the Santa Monica Freeway. KYPA used to be KGFJ, one of LA's historic stations.

No reason it shouldn't work just fine. However, monopoles that are tall enough for use as AM radiators are not particularly inexpensive. Most of the cell and PCS towers that are monopoles are under 100'.

Monopoles are quite routinely skirted in order to detune them at AM so they don't mess up the patterns at nearby AM DA's.

Gray

Agreed!

All the Class I-Ns (which are allocated only to the non-contiguous states and territories, and, so far, only to Alaska) employ non-conforming radiators, most of which aren't even conforming for a Class B station.

Don Forsling <ddforsling@qwest.net> wrote:

"Which reminds me of listening to Authur Godfrey Time one morning, probably in 1950-51, and hearing Godfrey beefing about having to change the station break cue. As you may recall, Archie Bleyer's band would play a bit of "Seems Like Old Times", and Arthur would say, "This is CBS, the Columbia Broadcasting System." Starting on that day, it became, "This is the CBS RADIO Network." And that, I think, was a significant clue that the end of big-time network radio was just a few short years away. But that's another story."

That would have been in 1951, when the corporation was restructured to make the radio network, the television network and the owned and operated stations separate divisions; the process took quite a while, and CBS News didn't become a separate division until 1959. (And CBS would be restructured several more times over the decades; when Fred Friendly was president of CBS News in the 1960s he chafed at having the head of the Broadcast Group between him and the CEO, but when Ed Joyce held the same job in the 1980s he had someone between him and the head of the Broadcast Group!)

Anyone have recommendations for use in the UK, Hitachi or Sanyo?

I have had a Hitachi since Christmas and it is excellent.

Details at http://www.worldspace.com/receivers/receiver_hitachi.htm

or for Sanyo on http://www.worldspace.com/receivers/receiver_sanyo.htm

Mike
Bournemouth

Moving a little later......

I remember occasionally listening to the Wolfman on WNBC/New York after Sportsnight during the mid 80's, but it's only a hazy recollection. Was that syndicated or exclusive to WNBC?

According to :

http://www.440int.com/namess2.html#_dsumme

his bio indicates that his last radio stop was WTMX in Chicago in 1991, and the site also reports that he is now doing commercial advertising and promotion in Philadelphia.

Many thanks for your compliments on the Year-End issue. We enjoyed putting it together!

For those inquiring about our Thanksgiving trip to Indianapolis, a summary is available on the web. Scott Fybush joined us, and you'll find his summary at his NorthEast Radio Watch site. The full report, with pictures, is at:

http://www.fybush.com/nerw-001218.html

Northeast

IRW hears that a new jazz station will hit Fort Wayne, possibly by the end of this year. The calls WFJZ have been assigned to Alec Dille's Fallen Timbers' new station at 106.7fm (Hicksville, Ohio). Dille is the son of Pathfinder Communications owner John Dille III. According to the CP, he'll be running 6000 watts from a tower northeast of Hicksville, on OH-2. IRW thinks there will be a double-hop STL, perhaps off of Pathfinder's WBYR tower, since Hicksville is 30 miles northeast of Fort Wayne. IRW hasn't heard a target date for WFJZ to hit the airwaves.

Country/WBTU (93.3fm, Kendallville) GSM Lori Swihart exits.

Rock/WBYR (98.9fm, Van Wert, Ohio) PD Jim Fox earns a promotion to OM of both "98.9 The Bear" and sister Classic Rock/WFWI (92.3fm, Fort Wayne).

Where are they now? Former Urban/WJFX (107.9fm, New Haven) co-owner Louis Dinwiddie is now in sales at News-Talk/WOWO (1190am, Fort Wayne).

Northcentral

Oldies/WGTO (910am, Cassopolis, Michigan) rolls out a new morning show: "The Big Beat." Your hosts are still Mike Shannon and Deb Millard. The show includes 1950's and 60's music, along with old commercials, jingles, and fun. If you're not within listening range of WGTO, you can still hear it on the web at:

http://www.warpradio.com/asx/wgto-am.asx

Rock/WAOR (95.3fm, Niles, Michigan) adds Craiger Williams as their station voice. In addition to numerous stations nationwide, Williams also holds down mornings at WBBY in Tampa, Florida.

J.J. Davis, OM at the Mid-America stations in Logansport and Peru, departs. He was responsible for Classic Hits/WARU-AM & FM (1600am, 98.5fm, both Peru), Country/WHZR (103.7fm, Royal Center), Oldies/WIOU (1350am, Kokomo), and CHR/WZWZ (92.5fm, Kokomo).

Congratulations to WSAL/WLHM sports director Mike Montgomery has been named the 2000-2001 recipient of the IHSAA Distinguished Media Service Award for District I. According to a press release from the IHSAA, Montgomery is a 17 year broadcaster, the last 14 at WSAL/WLHM.

Northwest

News-Talk/WIMS (1420am, Michigan City) moves out of its original studios on the southeast side of Michigan City to the St. George Broadcasting complex on Olcott Avenue in Hammond. Some Michigan City residents, already angered by WIMS dropping local news, in favor of regional Northwest Indiana coverage, feel as if the move is akin to a close friend moving away. When St. George Broadcasting purchased WIMS from M&M Broadcasting, they changed to a "regional news format" where, instead of primarily covering Michigan City news, they covered news from a three county area (Lake, Porter, and LaPorte). Some residents who were angered by this tuned out. According to an article in The South Bend Tribune, OM Dave Flood says the move to regional news takes advantage of the radio station's 5000 watt signal.

Central

Jan Sutter, MD/middays at CHR/WNOU (93.1fm, Indianapolis) exits for KSLX in St. Louis, Missouri for identical duties. If you're interested in the job, contact us for details on where to submit your package.

After only two months, Dam Somers exits mornings at Classic Rock/WKLU (101.9fm, Brownsburg). His co-host Jay Baker remains in mornings.

Where are they now: Former CHR/WNOU (93.1fm, Indianapolis) morning man Marty Simpson is now doing mornings at KQCH in Omaha, Nebraska.

Bob & Tom affiliate news: They're dropped at KXTA in Los Angeles, California.

Westcentral

Longtime Oldies/WCVL & Hot AC/WIMC (1550am, 103.9fm, both Crawfordsville) GM Dick Munro will retire on January 31. Munro was also an air talent when WCVL signed on in December, 1964. He'll remain at WCVL doing mornings. Jill Pursell, GM at sister CHR/WVXI (106.3fm, Crawfordsville) adds GM duties at WCVL & WIMC. Also at WVXI, APD Tony McGuinness exits, and Cale Stephens moves from nights to afternoons.

Southcentral

Mike Carter removes "acting" from his PD title, as he's now officially installed as PD at Country/WKKG (101.5fm, Columbus).

Before we leave Columbus (and the Findlay Publishing properties), we'll tell you that Gil Nalley is now PD at sister Oldies/WINN (106.1fm, North Vernon).

Southwest

Jim Gilmore, Jr., owner of Evansville TV station WEHT (Channel 25, Evansville [ABC]) died Sunday December 30, 2000 in an automobile accident. Gilmore, 74, had owned WEHT since 1964. His other accomplishments include being elected mayor of Kalamazoo, Michigan in 1959; the city's youngest mayor. He also owned & operated Gilmore Enterprises which sponsored several Indy race drivers, including A.J. Foyt.

Religious/WBGW (101.5fm, Fort Branch) has completed their power upgrade from 1000 watts to 2100 watts from a transmitter near the intersection of Interstates 64 and 164, north of Evansville.

Big changes at Brill Media: Ladonna Sutton exits nights at Evansville's CHR/WSTO (96.1fm, Owensboro, Kentucky). Also, Puddin' exits late nights at WSTO for nights at WXYK in Biloxi, Mississippi. If you're interested in the gig, contact us and we'll tell you where to send your package. Finally, Jack Shell joins WSTO from mornings at WMHX in Louisville, Kentucky. There, he'll be production director & afternoon guy.

Finally, a note about LPFM. Shortly before the end of 2000, the FCC released a list of 255 applications that meet the required guidelines and are uncontested. They are now eligible for construction permits. In our area, they are:

Calvary Chapel of Crawfordsville, Inc. (93.9fm, Crawfordsville)
Advanced Search and Rescue (107.3fm, English)
Elkhart Adventist Broadcasting Service Corp. (96.3fm, Elkhart)
Christian Fellowship Church, Inc. (102.7fm, Evansville)
Iglesia Sinai Pentecostes, Inc. (106.7fm, Goshen)
Huntington College (105.5fm, Huntington)
College Wesleyan Church (94.3fm, Marion)
New Castle Broadcasting Service, Inc. (107.5fm, New Castle)
Midwest Ministries, Inc. (102.5fm, North Vernon)
Voice of the Fighting Irish, Inc. (105.5fm, Notre Dame)
Menominee (105.7fm, Plymouth)
League of United Latin American Citizens (98.1fm, South Bend)
The Book of Life Bible Institute, Inc. (93.5fm, Valparaiso)
Neighbors Corp. (98.3fm, Valparaiso)
Blessed Beginnings (98.3fm, Warsaw)

That's it for this abbreviated issue. We'll be back in two weeks with the latest in news, including an Indianapolis station sale...

>>
If you can find it there is a book that has a lot to say about WENR and early Chicago radio...including a photo of Ransom Sherman and Everett Mitchell standing in front of the new WENR transmitter (50,000 watts...870 or 1050 kc? that was in dispute at the time) building for its dedication.
>>

Pre-NARBA, WENR/WLS were on 870 with 50 kW ND, while KYW/KFKX were on 1020 with 10 kW ND.

Post-NARBA, WENR/WLS were on 890 (changed by the table method, +20 kHz), while KFKX was deleted and KYW was moved to Philadelphia and was on 1060 (changed by exception to the table method, +40 kHz, instead of +30 kHz, which otherwise would have made KYW 1050 kHz) with 50 kW DA-1.

This required deleting WRAX, in Philadelphia, which would have been on 1050 kHZ by the table method.

1050 kHz, which was a Mexican clear post-NARBA, would be assigned to WHN in New York, which allocation required deletion of WPAP, WQAO and WRNY, all of New York and had been previously sharing time with WHN.

Dick moved to WISH radio, 1310 AM until his move to Boaston in 1963.
He was very popular at both WIBC and WISH. He also hosted a saturday
dance show on WISH-TV for several years after his move to WISH radio.

If anyone wants to hear the biggest event in Radio History the Nuclear Warrior Helter Skelters have already commenced on WEVD-AM 1050 on your Nuclear Warrior AM Dial.

If you missed the first Nuclear Warrior Skelter (as I did) there others coming up at 4:15PM, 6:57PM and 11:45PM tonight.

If the Internet is still working, send messages. Try not to miss this Historic Event in the History of All Time!

This is today's schedule only!

Scott
I'm the biggest movie star in the World! :o

I haven't even heard this thing yet mySELF! :o So if you're in the New York Area don't miss this Once in a Lifetime Event! I'll be rolling tape on THIS thing just I did with my World Exclusive Cal.Jam WEREO AND the Nuclear Warrior Saga!

:sigh:

Yes, you are right. My first recollection was that the thing was fed to the center of the horizontal span, but then I realized the feed is at one end, making it an L and the horizontal part should behave like top loading of any vertical.

Are there any horizontal dipoles being used on AM in the US? And aren't Unipoles essentially folded dipoles?

Mostly African. BBC World service English for Africa is in there ads is WRN English which carries a daily half hour slot of Radio Australia. Plus Worldspace channels like Voyager, Riff and a clutch of others catering for many musical tastes.

And when you get bored of that you can listen to Radio1 on FM

LONDON - Police on Tuesday charged a man with the murder of an
8-year-old girl, a killing that caused a national outcry against sex
offenders and sparked vigilante-style attacks on suspected pedophiles.

Police said Roy Whiting, 42, of Littlehampton, south of London, has
also been charged with kidnapping Sarah Payne, whose body was found
partially buried in a field in southern England on July 17, two weeks
after she disappeared.

810. xfl ratings

Newsgroup: rec.radio.broadcasting
Date: 2001-02-12 23:52:59 UTC
From: se <steve5@airmail.net>
Message-ID: <t8gtqrceg9uve9@corp.supernews.com>
Source record: 15672

XFL on Saturday night on NBC averaged a low scoring 4.8/8 household rating in
overnight markets (6.4 million viewers), down from last week's inaugural game
which drew a 10.3/17 (15.7 million viewers). In the A18-49 demo, XFL drew a
slight 2.9/8. A technical snafu about 12 minutes into the game was
certainly a distraction as the network lost the satellite from the Chicago v.
LA game, sat on a graphic for 90-seconds, and then went to an alternate game
for about 25 minutes. This type of glitch and switch makes it especially
tough to watch anything, and particularly tough to build interest and
momentum in a football game.

They are sometimes called Marconi antennas. The vertical part radiates
and the flattop serves as a capacity hat to assist in matching the
antenna to the source. Some hams use this type of antenna on 160
meters, which is in the 1800-2000 khz range, just above the AM expanded
band.

Except that it does NOT have coverage maps. Also, the claimed coverage radius for each FM station is greatly exagerated. It doesn't consider interference from other stations.

It's called an inverted L, used extensively by hams on 160 meters.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Our station carried his radio show from ABC for awhile. If his TV show is anything like the radio show it's just more time for him to show how much of a neurotic worry-wart he is. I guess some people must like such a concept. Go figure.

It was exclusive to WNBC. You might check out Wolfman's autobiography
for more.

I lived and worked upstate at the time. The show was a great listen.

A bit off-topic, but what AM station has the title of the first to use a directional array? I think 710 WOR might qualify... from the early '20s to the '50s (I think), they used two "Eiffel towers" with a wire strung between then, and a wire hanging vertically between the two towers. This acted as a three-tower directional array, giving their signal a peanut shaped pattern, with main lobes aimed towards NYC and Philadelphia.

>sold out again, but this time for good.

Another great saga of corporate greed's effect on programming diversity. Let's review the past decade or so, shall we?

First, neighboring Greeley gets one of their two FM stations stolen and silenced (KGRE/92.3), so that yet another FM allocation can be shoe-horned into metro Denver. This became 92.5, licensed to Thornton.

Later, the unique Classical programming on KVOD is kicked off 99.5, in order to make way for another cookie-cutter, "Arrow-type" 70s Rock station ("The Hawk.") KVOD is relegated to the inferior 92.5 frequency, which suffers signal problems in the southern part of the metro.

Still later, KVOD is booted off FM entirely, and forced onto the AM band at 1280.

Finally, the unique programming of KVOD is silenced entirely, to make way for yet another AM Spanish outlet in Denver.

Just another example of why radio programming is so dismal today and why TSL numbers continue to fall.

I remember hearing this a few times (the local college put it up overnight on their cable channel) It was a local WNBC show, apparently put up on a satellite channel just as fill.

The times I heard it, there was a d.j. live at WNBC and all of the Wolfman bits were taped. The Wolfman even took phone calls from listeners, "talking" to the caller via taped bits. It sounded fairly convincing at first, until you heard a few calls and realized they were using the same taped bits over and over. But I'm sure the callers really thought they were talking to the Wolfman!

Colorado Public Radio is planning on changing classical & NPR KCFR-90.1
to full-time classical. KCFR will get the KVOD calls (which they have
temporarily put on their new CP on 103.3 in Delta CO). NPR shows will
go to an AM signal and a FM they are buying north of Denver.

It is a shame to lose a commercial classical outlet -- but I suspect
listening to classical music on a non-commerical FM is still better
than listening to it on an AM signal.

There aren't many commercial classical outlets left. What is left seems
to be shrinking. Tulsa's KCFM-94.1 (changed to soft AC KTSO) and Chicago's
WNIB-97.1 (in the process of changing now...) being recent stations
dropping the format. One of the radio sites (don't recall which one --
allaccess.com maybe) reported classical KHFM-96.3 Albuquerque is also on
the verge of changing, and it has historically done pretty well in
the ratings.

While I have no direct experience with current Hitachi products, I did work for the company about fifteen years ago. Overall, their products were very well made and the company was current when it came to market trends. In my opinion, consumers should pay a little more attention to this company's products - they are often underrated.

827. WLOR 1550 in Huntsville, Alabama

Newsgroup: rec.radio.broadcasting
Date: 2001-02-13 19:48:11 UTC
From: cingram@aol.comNOSPAM
Message-ID: <t8j3rr40b5kq54@corp.supernews.com>
Source record: 15688

I have a question about this station. Several sources, including their Web site, show WLOR 1550 broadcasting at night. Since the old WAAY nighttime array was torn down in 1992, and 1550 has been a daytimer ever since, how did this happen? Did WLOR build a new nighttime array? WAAY was a two-site deal, with the towers for the 50,000-watt daytime pattern out on Pulaski Pike (to the north) and the 500-watt nighttime array on Church Street (northeast of the city).

829. Expanded Band Propagation 1630?

Newsgroup: rec.radio.broadcasting
Date: 2001-02-13 19:48:13 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <t8j3rth6jnfa57@corp.supernews.com>
Source record: 15690

Both WDRW Augusta GA and KCJJ Iowa City IA are in the expanded band
at 1630, both running 10 kw daytime.

How come, both being 460 miles from me in Central Ohio, KCJJ is always
10dB stronger?

I notice it because I have to null away KCJJ to hear Imus on WDRW, and
not only is KCJJ a lot stronger, but its angle of arrival drifts,
so it's a bear to null for long. I think I've settled on a 2-element
phased array along a SE-NW line with a nulls west and north, the
null actually being a cone that hits a range of elevation angles
from the west before bending northwards.

Both stations have pretty much faded away by noon, but they're both good when
Imus finishes at 10. I expect things will get worse as the sun gets higher
sooner. On the other hand sunspots are declining now.

I have 11 Ward Beck Systems VU meters scavanged from one of their mid-70's audio consoles.
These are 4 1/2 by 3 inches and have lights. Meter and pointer excellent and working when removed from service.

I also have a 19 inch 3 unit rack panel with two 5 by 3 inch meters mounted.

$200 for the entire lot.

Message-ID: <t8kdpqb6dn84dc@corp.supernews.com>
Source record: 15695

The oldest DA on the West coast was the old KGW, 620 kHz, Portland, Or.
Alas these towers were felled just after the new year as part of a
wetlands remediation project so the Port of Portland could expand the airport.

On the west tower, one could still see where the sectionalizing
insulators used to be when it was built as a two tower Franklin array in
the early 30's. These were removed when the east tower was replaced in
1949 after it had been knocked over by a house.

Rumor has it that pictures of towers coming down are to be posted on the
local SBE chapter web page

http://www.sbe124.org/

though they weren't there when I looked this evening.

The show is originating on WJR - a Detroit ABC O&O 50 KW AM (760 KHz) station - "The Great Voice of the Great Lakes." The ABC network and now the web have carried the first two hours for the past six years. The 5-6 PM ET hour is more Detroit oriented, and some of the interviews are repeated. On another note, WJR's AM drive-time announcer just got himself promoted up to the network's main stratum.

Yep, I remember that. I was still living in Denver then. It became a country station and called themselves "Big Dog." I don't know what that station is now.

>problems in the southern part of the metro.

Not only that, but when I lived in Colorado Springs, I ALWAYS had trouble tuning in their Colorado Springs translator on 103.5 MHz. Fortunately, about that time, a non-profit came on the scene in Colorado Springs, KCME-FM, 88.7 MHz (88.1 when they first went on the air). They are still there, as I log into their web site occasionally.

>Still later, KVOD is booted off FM entirely, and forced onto the AM band at
>1280.

This is what most people would call "the beginning of the end." Why even go to AM in the first place? You don't have NEARLY the harmonic range of FM.

>Finally, the unique programming of KVOD is silenced entirely, to make way for
>yet another AM Spanish outlet in Denver.

At least the new owners had enough brains to donate the library to the local non-profit classical station, which is still alive and kicking, at least. I wonder if KCFR will change their callsign to KVOD?

We have the same situation here in Houston. There are two classical stations, one commercial, KRTS-FM (92.1), and one non-commercial, KUHF-FM (88.7), which is owned and operated by the University of Houston. KRTS has already been bought by a mass media corporation who puts dollars ahead of listeners. Which one are you willing to bet will survive in the long run? Only time will tell...

Paul, a Coloradoan in Houston.

Well, I'm one of the "few" who actually ENJOY the XFL. I will be watching any game that does NOT have Jim Ross and Jerry Lawler as the p by p and color guys....The action is cool, I love the camera shots, but I cannot abide those to IDIOTS trying to call a game...I think every telecast should have SOME football related person on air in some capacity. Or at least a professional P by P guy...Like Jesses partner.

Rick

So they are getting rid of NPR? Hmmm. I must admit I don't often listen to NPR news, but it is interesting to listen to some of their other programs. I'm sure they will be losing their funding from NPR if they do that, even if they put it on another station.

>
>It is a shame to lose a commercial classical outlet -- but I suspect

>than listening to it on an AM signal.

I suspect that also. Classical music and non-commercial stations do seem to be good partners. And from my personal experience, the studio hosts are more open and personable at the non-commercial stations than at the commercial stations, anyway. I have had many a good conversation with the studio hosts (didn't want to call them DJ's; seems rather tacky for a classical station!) over the late night hours, over the phone or even at the station with a cup of coffee and a doughnut!

Paul.

Here in Texas we still have KRTS "K-Arts" in Houston and WRR-FM in Dallas.

I'm not that familiar with WRR. But KRTS runs a "Not your daddy's classical station" format. I tune them in whenever I go to Houston.

>>
A bit off-topic, but what AM station has the title of the first to use a
directional array?

I think 710 WOR might qualify... from the early '20s to the '50s (I think),
they used two "Eiffel towers" with a wire strung between then, and a wire
hanging vertically between the two towers. This acted as a three-tower
directional array, giving their signal a peanut shaped pattern, with main lobes
aimed towards NYC and Philadelphia.
>>

Close, but no cigar.

This installation started out as a "long wire" horizontally-polarized antenna.

Later, it was converted to a three tower vertically-polarized directional array
by using the two self-supporting towers and just the (vertical) feed line of
the long-wire.

In about 1969 a new three tower DA was installed, which is the current
facility.

The first DA on record was in Florida.

And another in Portland, Oregon, also predates WOR's conversion of its old
long-wire to a DA.

Best guess for WOR's conversion from long-wire to DA was about 1938.

The FL and OR DAs occurred earlier than that.

> 10dB stronger?
>
>

Part of it may be due to the very high ground conductivity in Iowa. In most AM antenna installations, half of the antenna is in the grounding system and the higher the ground conductivity, the better coverage you have. If I'm not mistaken, one of the highest ground conductivity areas is near Ft. Dodge, Iowa and there's a 5,000 watt day (182 watts night) station on 540Khz there. They really get out in the daytime. Actually, the nighttime coverage isn't too bad.

The higher frequencies tend to have less ground wave and tend to skip more and you are probably getting a little skip from each of the stations until well into the morning.

We have an expanded band station here on 1700 that you can hardly get 10 miles away in West Des Moines at night. The frequency sounds like a dog fight with several other stations skipping in. They are loading one tower of what used to be an old 1390KHZ array and I would suspect that it doesn't have much of a grounding system under it. They are also loading 1390 at low power on the same tower radiating from wires running up the side of the tower (they tore down the 4 tower array). Makes me wonder how much the FCC knows about the operation. Also, there is a constant motor boating or buzz on the 1700 signal. Real class!

There are many great books that refer to "Wolfman", he was truly a star. I had the very distinct pleasure of Publishing a Music Magazine in San Diego, when he made his "TRIUMPHANT RETURN" to the airwaves in the late 80's...I got to know him fairly well, and even had him writing a column called "WolfTrax" for my publication. I also have one of the only known pictures of he and his lovely wife together, which he allowed me to take while I was shooting the cover shot for my mag. Not only was Wolf a pioneer in our industry (border radio), he told me of having to SMUGGLE the records into mexico when he was on XERF. It was illegal at the time to bring the records across the border.
Another thing that most probably don't know if they haven't read his biography, is that during the day He was BOB SMITH the SALES GUY for XERF in the Del Rio, Tx area. I had the DISTINCT HONOR of knowing the man, and being there when the first ever ACROSS THE BORDER FEED happened from the studios of XTRA (now xtra sports 690, was 69 xtra gold). It was the first time the FCC and the Mexican authorities let a signal originating in the U.S. be broadcast from a Mexican licensed transmitter, which allowed him to COMREX his show from his studio in his house (after the bugs were worked out).
Hope I didn't bore you, but I actually cried when I heard of his passing while I was driving home (at that time Mason City, Ia) so I could get an hour of sleep before I did Wake-Ups that morning on KIAI (the Country Moose). I will always miss him and also the good things he did through the "Starlight Foundation"...Love ya Wolf

842. WCLV Cleveland Re: KVOD, Denver Fades Into History

Newsgroup: rec.radio.broadcasting
Date: 2001-02-14 07:44:08 UTC
From: tallones@prodigy.net
Message-ID: <t8kdq82d1qgrf5@corp.supernews.com>
Source record: 15553

[Subject changed by moderator]

WCLV 95.5 in Cleveland is in the process of a unique deal to preserve classical Music in Cleveland..Swapping dial positons with Salem Communications WHK 1420 and Clear Channels(104.9) WAKS Lorain, Ohio as Salem sells WHK-FM 98.1 (Canton) to Clear Channel. When the dust clears, WCLV will be AM 1420 and FM 104.9
and WHK will be on 95.5 .
ClearChannel will put a new station on 98.1

[Moderator's Note: Tim is correct. There is A LOT more to this story than meets the eye, however.

Here in Cleveland we are very lucky to have WCLV, which is one of the few successful *commercial* classical music stations in the country. As Tim mentioned, the idea behind this swap was to make sure we don't lose it. As I understand it, this idea was the brainchild of current WCLV owner Robert Conrad, and WCLV will end up being owned by the same non-profit consortium that currently owns NPR/jazz/news WCPN 90.3 and PBS affiliate WVIZ-TV 25.

Currently 104.9 is Top 40, and WHK is running brokered religious programming, both on WHK-AM in Cleveland and WHK-FM in Canton. This raises the question of what will happen with Hot AC WKDD/96.5 in Akron. I complained pretty loudly when Clear Channel bought them, because I like the jocks and I like the music and I figured CC was going to come in and break something. They've not touched anything to date, but a friend of mine pointed out that they can do much better as a middle-of-the-pack Cleveland station than they are currently, billing out as the #1 station in Akron, a much smaller market.

This friend figured CC would move the 'KDD transmitter closer to Cleveland -- not that that's necessary, they have excellent coverage all over the area -- and position themselves as a Cleveland station.

With 104.9 going to WCLV, and CC not getting any Cleveland frequencies in return, I have to wonder about whether that's going to happen.

Of course, Clear Channel WILL be getting 98.1 in Canton, which is also a relatively strong station. So maybe they'll swap the Hot AC onto 98.1.. who knows... all I know is it will be interesting when this is finalized.]

And you're right, too, David. I checked the FCC data base and it is an inverted L not the flat top T that I thought you were talking about.

In an inverted L both the vertical and horizontal portion radiate, but the radiation from the horizontal section won't give rise to groundwave propagation so that which isn't absorbed by the ground is wasted as skywave.

In the T shaped flat top, the radiation from each half of the T cancels out the other, so there is no net radiation from the horizontal section. If there is a good ground system under the horizontal section, very little energy is lost to ground losses.

The old official FCC logo depicted a way cool 3 (?) wire flat top antenna with lightning bolts. (The new logo just looks stupid.)

Horizontal dipoles are very poor choices for AM, because they can't excite groundwave propagation. The only form of propagation left is spacewave (line of sight) and skywave. The spacewave has very high losses when essentially parallel to the ground.

A unipole is actually half of a folded dipole or a folded monopole. The skirting wires are just a feed system that acts as a transformer. The radiation characteristics are identical to a standard series fed radiator of the same size and shape.

Gray

Weren't there loads of DAs before 1938? Wasn't Gordon Brown of RCA the guru?

IIRC, WRC Washington had their DA-N array by about 1936. Why would they buy such a large site if they didn't plan on a DA?

Didn't WMAL have 3 towers at night in the same era. Wasn't WJSV on a 2-tower array at their old location, which they lost when Washington National Airport was built [~1940]? The tower footings were there for many years after the move. And these are just stations in the DC area.

Xen Scott, where are you with the old FCC files on microfilm?

849. WNIB Chicago's Not Classical--But What Is It?

Newsgroup: rec.radio.broadcasting
Date: 2001-02-15 00:38:04 UTC
From: "Jeffries, Mark" <MJeffries@KRW.com>
Message-ID: <t8m97cd8qn1tb4@corp.supernews.com>
Source record: 15564

The sale has taken place and Bonneville has taken Chicago's WNIB over from Bill and Sonia Florian and flipped the station from classical after almost 46 years--but is stunting rather than establishing a format.

The Florians wrapped up their ownership of the station Sunday night, with announcer Bruce Duffie pulling the plug on the many phone calls coming in from well-wishers and saying so on the air in order so he could better concentrate on the last show, which featured many local performers. We don't know if the stray dogs and cats taken in by the Florians were heard in the background in the final hours of the last ma-and-pa FM station in Chicago. Shortly before midnight, Duffie bade farewell and played "Lyric for Strings," a piece by 20th century American composer George Walker which had a serenity that said more about the station than any words could say. The piece ended a few seconds before midnight and no other words were spoken until the carrier went off at 12:01 a.m.

At 12:25 a.m., Bonneville turned the carrier back on, ran a legal ID that just mentioned 'NIB, not WNIZ, the repeater station in north suburban Zion, and then started to play the CD of Barbra Streisand's 1999 New Years Eve "farewell" concert that began a day-long marathon of Streisand that seemed to come primarily from three CDs, two of them live albums. There were no commercials and no announcements other than the legal ID at the top of the hour (which sounded like it was read by Tanya, the evening jock at sister station modern AC WTMX, which WNIZ is now simulcasting). Today, the station's presenting a marathon of Garth Brooks. Tomorrow--well, who knows (except that Sun-Times media columnist Robert Feder's returning from vacation tomorrow).

Which, of course, leaves everyone up in the air about what course Bonneville's going to take with 'NIB. Playing Streisand indicates that they could go soft AC, a format missing in Chicago since WLIT decided to enliven their playlist to compete with Bonneville's WNND (Windy 100) a couple of years ago. They could even go for the odd choice (for an AM station) of adult standards. But playing Brooks could indicate that they're going to compete with Infinity's WUSN (US99), which, according to today's Chicago Tribune, is going to be proclaimed Chicago's top billing station by the new Duncan's American Radio Guide.

Whatever they become, you won't be able to check on the Web--the station's web site was pulled on Saturday and still shows a virtually blank Parent Directory at www.wnib.com. A few of the station's programs have found new homes, however--the NPR magazine show "Performance Today" has moved to weeknights at 10 p.m. on Window to the World Communications' WFMT, the city's remaining classical station (www.wfmt.com). And Chuck Schaden's beloved old time radio show "Those Were the Days" began airing last week on

College of DuPage pubcaster WDCB in west suburban Glen Ellyn in its accustomed Saturday 1-5 p.m. slot. However, 'DCB's signal into the city is spotty, at best, and the station doesn't stream at this point. No indication where Karl Haas' "Adventures in Good Music" or any other syndicated programs are going (although I would assume that since WTTW chief Dan Schmidt helped develop "Schikele Mix" when he was at Minnesota Public Radio, that show will be on 'FMT soon enough).

Needless to say, many classical music fans and people who like the idea of radio stations being locally-owned and operated are mourning and will continue to mourn the disappearance of WNIB as we knew it.

> Fred Cantu
> Austin, TX

WRR bills itself as the oldest radio station in Texas (originally an AM station). It is owned by the City of Dallas and has an all-classical format supported by advertising. Whenever the City Council of Dallas, the sessions of which are transmitted by WRR (!), gets the idea of selling WRR, the arts community takes up arms and swats the idea down.

There are some problems, however, IMO, regarding WRR:

1) The programming is a bit thinner than, say, twenty years ago, with music tending toward the "classical top-40" and not toward more challenging material.

2) A degree of dumbing-down has occurred, with less of the spectrum of the classical repertoire represented in WRR's programming (no opera except the Met broadcasts and tapes of the Dallas Opera's previous season of performances; little other vocal music), little chamber music or modern music, etc.

3) The printed program guide is not comprehensive in its listings, with only the "featured selection" listed and not its associated selections within the time-slot. And the printed program arrives late in the mail. I got this month's guide on the 10th!

4) There is excessive use of limiters at this station, destroying balances and subduing climaxes.

I have always argued that a classical FM station should offer the full spectrum of classical music of all periods. This was also the argument of the late PD of Austin's KMFA-FM, Leonard Masters. ("Any FM station that isn't carrying classical music at least 50 per cent of the time is prostituting FM." So spake Masters to a gathering of broadcasters many years ago. He recalled that this comment produced a general fainting-away of station executives in all directions...)

I wish to point out once more the fact that Austin's KMFA-FM is all-classical and entirely listener-supported, as it has been for over thirty years. I'm proud of Austin for this accomplishment.

--
E.A.C. (who still mourns the passing of Philadelphia's WFLN-FM, once a great classical FM station...)

It came to me in a magical vision that on Wed, 14 Feb 2001 07:44:00 -0000, that marvelous person "DaVoice" <coastradioguy@bigfoot.com> had informed us of the following:

>Well, I'm one of the "few" who actually ENJOY the XFL. I will be watching
>any game that does NOT have Jim Ross and Jerry Lawler as the p by p and
>color guys....The action is cool, I love the camera shots, but I cannot
>abide those to IDIOTS trying to call a game...I think every telecast should
>have SOME football related person on air in some capacity. Or at least a
>professional P by P guy...Like Jesses partner.

While I don't care for Jim Ross as a football announcer much either, he has done play by play for the Atlanta Falcons, so he does have some credentials beyond wrestling. I did think he was better the second week. Jerry Lawler has drooling over the cheerleaders down, but other than that, he's worthless.

Unfortunately, WebTv doesn't support this type of streaming content- one of the service's many limitations. With decent computers getting so inexpensive, you might want to think about getting one. It's worth it. We use the Internet a lot, and bought a WebTv unit for the bedroom, so we would have internet there. We became so frustrated at the many things that we could not do with it, that we cancelled the service. We bought a second computer and are now much happier. There is a lot of great content out there on the 'Net, like streaming audio and video, and WebTv just doesn't cut it, in my opinon. --

853. WNIB Chicago Addendum--Mix v. Mix in Milwaukee?

Newsgroup: rec.radio.broadcasting
Date: 2001-02-15 00:38:10 UTC
From: "Jeffries, Mark" <MJeffries@KRW.com>
Message-ID: <t8m97i54eqk2bc@corp.supernews.com>
Source record: 15561

In writing my previous post about Bonneville's stunting at WNIB, I mentioned that WNIZ, their north suburban repeater that reaches into some of the Milwaukee area, is simulcasting Bonneville's modern AC WTMX (The Mix). Of course, it should be pointed out that Milwaukee already has WMYX, a modern AC that calls itself "The Mix." Now not too long ago WMYX showed up in one Chicago Arbitron book because its signal reaches into the northern suburbs and the one Wisconsin county (Kenosha) in the Chicago ADI--but with some people in the Milwaukee ADI getting two different radio stations calling themselves "The Mix" and playing mostly the same music, do you think we'll have some invalidated Arbitron books in the future? Probably.

>their popularity. This...I don't get.

I have been listening for about 3 years...and yes, the MSNBC thing is
in it's 3rd week.

Mitch Albom does a good local show that may not translate to a
National audience, although he seems to be doing well. For some of
you used to Fox News Net, where they give everything out in 15 minute
blocks and cut the speaker off at the knees for breaks, it might seem
unusual the way Mitch goes into breaks, but he is a columnist turned
broadcaster.

So, bottom line, I still listen to his show on radio in the afternoons
while I'm driving the countryside. Since MSNBC is on Dish and not our
local cable outlet, I doubt that many people in our area even know
he's there.

Sure do. I was working at KFOX, Long Beach, at the time. The late
Stan Evans was the one who had to decide whether it was gospel or
bullshit. He chose bullshit.

One of the scariest things about deregulation and production-line
radio is that machines have replaced not only the mundane tasks, but
the important ones as well.

Today, the communications centers either have nobody home, or somebody
who has less sense than most of the few remaining listeners. We may
pay a very serious price for that in a true national emergency.

They just started on 740, at the frequency where the CBC was for years
before they moved to FM. It's interesting that even though they're aimed at
older audiences, they play some current music.

And to help you out, Lee Ann Womack's the artist who does "I Hope You
Dance"--and it is a great song.

The "deal" is promoted as a way to save classical music radio in Cleveland, but moving the WCLV programs to 104.9 in Lorain will certainly DOOM classics.

WCLV is full Class B, the equivalent of 50 kW at 492 feet, 104.9 has a construction permit to increase to 2.65 kW at 499 feet and is almost 24 miles west of the present WCLV site. This puts Cleveland well outside the protected coverage area of 104.9.

First adjacent Class B in Salem will kill them in the better SE suburbs, First adjacent Class A in Geneva will kill them along the lake to the east.

Goodbye classical radio in Cleveland. It looks like it's going the same route as Denver. Spin as hard as they might.

Hmm. Does the WWF have any "professional" wrestling people? Why should
the XFL be required to have "professional" football people?

I've often wondered if the "professional" wrestlers could hold their
own with a good college wrestler who actually knew how to use strategy
to win a match.

Strip away all the showbiz ranting and raving and you've just got a
bunch of overweight, steroid driven actors.

I'm willing to bet that the WWF is appealing because it's much more
intimate (strange word to use with brutality) on a one-to-one basis
than the XFL is with a banch of fat guys scattered around the field.

It's pretty bad when the only thing that can legitimize the concept is
Opie and Anthony doing a pregame "show."

In our published material we claim the title. The array was developed
by the Bell Telelphone laboratories. It's intent was to direct the
signal toward the two closest major population centers, New York and
Philadelphia without wasting signal over the ocean. Fortunately the
lobe toward Manhattan and Long Island used the ocean nicely to deliver
a signal to Boston.

I'm in northwest Iowa, and the other night I could actually listen to only two stations on the expanded band... 1690 Radio Disney in Denver, and 1700 sports talk from Texas. Every other channel (including 1630 in Iowa City) had 2 or more stations fighting for the frequency. I suppose it's because these stations are only 1000 watts at night, but at least for me, the expanded band is considerably more crowded than the rest of the AM band.

Seek work in a "right to work" state, such as Virginia. In Northern
Virginia, you can pump your show into the Washington DC metro (Top 10
market), competing against the guys that HAD to sign non-competes.
I almost got bit once by a non-compete, stating I couldn't work another
station within 100 miles. My next gig was 125 miles away.
Ha-F'ing-Ha to them.

> expanded band is considerably more crowded than the rest of the AM band.

At nighttime the power hardly matters because everything propagates forever.

You can take out one station by aiming the radio to null it, and if there's only one other station, you then get it fine. On the non-expanded MW band, this is usually not possible because there's usually dozens of stations and not two, and nothing is gained by taking out just one of them.

You'd need a very directive peak and not a directive null, and that's not possible without a physically huge antenna, in this many-station case.

The daytime is the interesting time if you have a very sensitive radio because fairly great distances are still possible just from lack of nearby stations on the frequency to cover things. I can hear traces of KCJJ and WRDZ at a distance of 460 miles each even at noon, rising slightly above the noise now and then. Not well enough to listen to though, at noon.

I assume that you are in the USA. The requirements:

1) Have at least $1 million ($10 million if near a large city).

2) Buy an existing small station.

All the frequencies are taken anywhere where people exist. IIRC, the FCC holds an auction for all unoccupied FM allotments late this month - the cutoff date for registering is long past. These allotments are sitting idle because no one thinks they would have a chance of being economically viable.

Low Power FM [LPFM] may offer an option out in the countryside. You didn't say where you are. Applications for LPFM stations are being accepted on a state-by-state schedule. As I understand it, only pre-existing noncommercial organizations can apply, and LPFM stations can't carry commercials. Most of the applicants have been churches.

I'm working on a cost analysis and financial projection for
the radio station I mentioned last month I may be buying.

I have most of the due diligence finished and now need to
examine the profit potential (heh, if any!) Best way I can
think to do that is to look at price-per-minute and actual
sellable minutes. Any pointers to online sites - or if
anyone can send me attached cards - would be most appreciated.

>the protected coverage area of 104.9.
>
>First adjacent Class B in Salem will kill them in the better SE suburbs,
>First adjacent Class A in Geneva will kill them along the lake to the
>east.

Yeahbut, WCLV has a translator in Erie, PA.

Geneva is roughly (more or less) halfway between Erie and Cleveland.

I don't know if the other translator in Wooster, an hour southwest of
Cleveland, would do anything for reception in Salem, but Salem is
close enough to Pittsburgh to possibly get whatever Pittsburgh has. Salem
is less than an hour west of Pittsburgh.

>Goodbye classical radio in Cleveland. It looks like it's going the same

I don't know how legal this might be, but the thought that comes to me is to use a pair of Family Radio Service unlicensed transceivers. They operate on UHF FM and will go up to two miles under ideal conditions. You can't legally soup up the transmitting power or transmitting antenna, but you could use a good UHF receiver and directional antenna on the receive end and improve the range. The question would be can you transmit that kind of material over those frequencies, or does it even specify what material is allowable? It's possible that the regs specify two way communications. Other users in the area might not be real enthused about it either as you would be tying up a channel for long periods of time.

Another thing that might work would be a Part 15 device (like a wireless mike transmitter) that works on the FM broadcast band. Again, you can't fool around with the power or antenna, but the device itself could be stuck up in the air and in the clear and the audio remoted to it by wire. You could also use a sensitive FM tuner and directional antenna (yagi) on the receive end. The programming material wouldn't be an issue in this case.

Hi Rich,

When was the WOR Directional Antenna built? While possible, it seems unlikely to me that the WOR Directional Antenna was installed before the WFLA Directional Antenna. The WFLA Directional Antenna was constructed in April of 1932 by Raymond M. Wilmotte. One article describing the WFLA array is in the June 1934 issue of Radio Engineering Magazine. The "new" WOR Directional Antenna is described in an article in the February 1935 issue of Communication and Broadcast Engineering Magazine. Unfortunately that article doesn't say exactly when the WOR antenna array was built. I think I know of another article on the WOR antenna, which may tell when it was actually built, I will check further to see if I can find that article. The WOR array was designed by the Bell Telephone Laboratories, and according to the article was installed along with a Western Electric 50 kW transmitter at Carteret, NJ, "some ten or fifteen miles southwest of the site of their present 5-kw station." J.F. Morrison, Member, Technical Staff, Bell Telephone Laboratories wrote the article describing the WOR "Directive Antenna". From his description, it sounds like the system was engineered from the ground up as a directional array at a new site, rather than being constructed using the support towers of an existing wire "T" antenna.

Yesterday (2/14):
<Wolfman Jack> ROLLLLLL WITH DA STONES, BEH-BEH!!!! <Wolfman>

Translated into English, that means the Rolling Stones were heard all day as Bonneville transitions WNIB out of its classical music format.

Today:
Surf's up, dude--it's the Beach Boys!

According to the Chicago Sun-Times, we should be expecting Artists du Jour (my term, not theirs) for the next month or so. Bonneville does have a format selected--they won't reveal it until "early spring." (I would hope the format would launch with a full air staff--I'm sick of new formats running jockless or partly jockless for indefinite periods of time).

So, folks, I don't think anyone at Bonneville reads this (and the stream's turned off, so you can't hear it on the web), but what would you like to see as a WNIB Artist du Jour? I have some suggestions:

Rickie Lee Jones
Eminem (just to see how Bonneville would handle it)
Audra MacDonald (musical theater actress with one of the most gorgeous voices in the world)
Aimee Mann
Nirvana
Pete Seeger (that would really freak out people)

Anyone else?

13 years, in one form or another. He started out doing 'Albom-Oriented
Sports' on WLLZ, an AOR (Album-Oriented Rock...get the joke?) station.

He started out his current show on 'The Great Voice of the Great
Lakes' back in, I believe, 1996. When 'Tuesdays With Morrie' sold a
gazillion copies and got made into a TV movie, he started syndicating.

I think his popularity is, as much as anything, a backlash against the
Howard Stern / Rush Limbaugh / Dr. Laura kinds of talk radio as much
as anything. Not to mention that stations are dumping local talent
whenever and wherever possible. After all, commercial broadcast radio
is a beancounter's business...not an artisian's art! It's not the
quality, nor even the ratings...it's the profit that counts.

It used to be "find an open frequency, secure a construction permit, and build your station."

Now, it's "spend thousands to find an open frequency, pay the exorbitant FCC fees, then watch as some greedy corporation (which already owns 4 stations in the market) bids the frequency away from you in a so-called "competitive auction."

As an aside, beware of a non-compete agreement which is presented as something else by the company which wants you to sign it.

Two years ago, I worked for a Kansas radio group. They asked all their employees to sign a "confidentiality agreement." The method used to secure signing was rather heavy-handed: copies of the agreement were passed out to all employees at a full staff meeting. It was obvious to anyone with half a brain that this was a back-door non-compete agreement (though management adamantly denied this, of course.)

I asked what type of compensation I would be receiving in exchange for signing such a document and thus compromising my right to seek employment elsewhere. All I got were blank stares and the usual (um...ah...uh...well...)

Needless to say, I didn't sign the document.

Here's a question for all you gurus out there, hopefully to pique my curiosity a little.

What was the first non-commercial radio station in the United States? I don't mean a station that didn't run commercials, but a station that operated solely on private funds and a few public subsidies, such as they do now.

Just being curious again.

Paul.

I can safely say that I am NOT one of those snooty kind of people. My musical palette is wide ranging, from classical, to jazz, to classic rock. So I could conceivably listen to the 1812 Overture one minute, and the next minute listen to Led Zeppelin!

A little off topic, but I hope y'all don't mind. :)

>>

Probably so as oterwise there would be no reason to insulate the end towers inless DA operation was eventually planned.

From the information I have, the supporting towers were converted to shunt-fed radiators during the conversion from "long wire" operation to DA operation.

Engineering texts from that era which describe the WOR installation show the ground system as clearly being installed with a "long wire" in mind, however.

It seems that the non-commercial stations have more variety in classical music than the commercial stations do. The comm's, of course, are more interested in their market share and ratings.

The local non-comm here in Houston, KUHF-FM, plays a lot of music from all eras of classical music.
I have been listening to classical for over 25 years (I am 37), and even now I still occasionally hear a piece from a composer I never heard of before!

Most likely the Mexican Class A on 1140, Monterrey, NL, operating with its day antenna at night.

Lately, KGO has been experiencing considerable interference from a Mexican, probably the one "notified" for 50 kW DA-N from Tampico, but operating ND nights.

The Mexican's signal is quite strong here in the Monterey Bay area, and KGO is sending about 150 kW, equivalent, towards me, so the most likely explanation is a high-power Mexican operating ND.

I'm getting really pissed off as I can't listen to either Bernie Ward or Ray Taliaferro without interference from that Mexican.

I have never known Clear Channel to pull the plug on a successful Top-40 station since that format is one of their strenghts. Kiss 104.9 is actually a pretty good station and so is WKDD. If anything, they'll add a little more rhythmic music to WKDD but pretty much leave it alone. I wouldn't be surprised if they repositioned it as "WKDD Akron/Cleveland" since Cleveland has such a void in the Top 40 format. And you're right, WKDD has great coverage all over NE Ohio.

I think putting classical music on the AM is actually a good idea. Certain types of music can still sound real good on the AM dial. I was driving through Knoxville during rush hour about 8 years ago and got to listen to the "Traffic Jam" which was a bunch of dance mix music on a station known as "Power 1120". The music sounded great on AM! Reminded me of top 40 in the 60's and 70's.

From: worldspaceradio@yahoogroups.com

For anyone who's interested... this month's edition of BBC World Service's Waveguide programme features a visit to WorldSpace's London Broadcast Operations Centre, where 19 radio channels are assembled for uplinking to AfriStar.

You can catch Waveguide at various times this weekend; probably the easiest in Europe are 0845 GMT on Saturday 17th and 1945 GMT on Sunday 18th. These times apply to the Astra satellite, 648kHz and short wave, though I'm not 100% certain about the WorldSpace West Africa feed....

The programme should also be available in streaming audio in a few days -- go to www.bbc.co.uk/worldservice/schedules/ and click the 'Listen to Waveguide' button over on the right (the January edition will still be there at the moment).

From 'N0JAA':
>It seems that the non-commercial stations have more variety in classical music
>than the commercial stations do. The comm's, of course, are more interested
>in their market share and ratings.

The comms have to sell ad space, so they'd better be interested in ratings.

However, I disagree with you on the basis that if they were that gung-ho
about market share in the first place, they'd be running another format.

It's too bad Diana Gannon of Boston's WCRB/102.5 doesn't post here any more.
WCRB's website doesn't have an airstaff list, so I am not sure whether she
still even works there. But she'd be likely to have an interesting reply to
this post. :)

From 'Dirty Harry':
>I have never known Clear Channel to pull the plug on a successful Top-40
>station since that format is one of their strenghts.

Indeed. Randy Michaels, who came to CC when they bought Jacor, is supposed to be a Top-40 guru.

>Kiss 104.9 is actually a pretty good station

It's formula - running the exact same format and jingles as their sister station WNCI in Columbus. But I like the format, having grown up listening to Top-40, and they've got some cool people working the mic. They're on one of my car radio presets; I guess that means I like listening. ;)

>and so is WKDD.

WKDD is an anachronism in this day and age, but what a great anachronism it is. (Perhaps I should say "it's an an-Akron-ism", because they're an Akron station, but... well, we're going a little off-topic...)

Commercial radio stinks, in general. :> But if I had a favorite radio station, WKDD would most definitely be it.

More than any other radio station, the air personalities seem like old, familiar friends (e.g. the morning show, which has been staffed by Matt Patrick and Barbara Adams for longer than any other local morning show has held onto *their* staff). And the station has a real, tangible commitment to the community. This is actually the only station I listen to in ANY market where community service hasn't ended up being something you wax nostalgic about.

They're wonderful, and they are the reason why I am hoping Clear Channel doesn't screw things up.

(Disclaimer: I don't work for WKDD. I don't work for Clear Channel. No one paid me to say what I just said.)

>If anything, they'll add a little
>more rhythmic music to WKDD but pretty much leave it alone. I wouldn't be
>surprised if they repositioned it as "WKDD Akron/Cleveland"

For many years they ID'd themselves as Akron/Canton, as did some other Akron stations. They stopped doing it a few years ago. I'm not sure they'd go to "Akron/Cleveland".

I still say 96.5 is going to run the Kiss format and WKDD will move to 98.1 - in which case they'd have to ID as "Canton/Akron", as WHK's city of license is Canton.

>I think putting classical music on the AM is actually a good idea. Certain

>60's and 70's.

Older folks are amazed that I remember Top-40 on AM, but I do. I remember
WWWE and WIXY playing Top-40. WWWE went all-news and is now WTAM. 1260 AM,
the home of WIXY many years ago, is now Radio Disney.

Those were the days... when I was young enough that I didn't have to care
about anything...

(I'm 31. Thanks for asking. ;)

Although, quite a few of their outlets seem to be slumping lately according to the recent Arbitrons. A fair number of their top 40s lost their #1 top 40 outlet status this time around -- Oklahoma City: KJYO fell to KKWD; Shreveport: KRUF fell to a tie with KSYR; Jackson: WDBT fell to WYOY; Wichita: KKRD fell to KDGS; Tampa: WFLZ fell to WLLD. What's interesting as well -- all of these Clear Channel stations lost to outlets on weaker facilities (100 kw KJYO losing out to 3 kw KKWD, for example).

Their "Kiss" clone outlets launched last year still seem unable to spark a lot of interest -- Midland/Odessa: rival KBAT leads "Kiss" KCRS-FM 12.8-5.9; Abilene: rival KCDD leads "Kiss" KHYS 9.9-7.3; Albany: rival WFLY leads "Kiss" WKFF 6.2-1.4; Jacksonville: rival WAPE leads "Kiss" WFKS 6.4-3.1; Tulsa: rival KHTT leads "Kiss" KIZS 4.8-3.1; Las Vegas: rival KLUC leads "Kiss" KFMS 8.5-4.6.

And a number of their outlets continue to fall further behind rivals -- Fort Smith: KISR expands lead over KZBB; New Orleans: WEZB expands lead over; Austin: KQBT expands lead over KHFI. KISR and WEZB not too long ago were behind their Clear Channel rival.

In Dallas, their KHKS has been slowly losing listeners over the last several ratings period and no longer at the top of the ratings, where it was battling R&B KKDA-FM for the #1 spot for the last 5 or 6 years.

They, of course, did have markets where they did well, but they seemed to have lost a lot of ground in a number of places in the top 40 format.

Since when did rules and regulations ever stop anyone, government or civilian? Not exactly related, but don't some states have restrictions on using police band receivers and radar detectors in a car? Those are both just radio receivers.

I have to respectfully disagree here. Classical sounds lousy on AM. Having listened to WQXR(AM) out in NYC, I can say it doesn't work well. The problem is one of dynamic range. You either have to compress the dynamic range until its little eyes bug out or you lose the quiet parts in the noise floor. You went on to say:

>Certain types of music can still sound real good on the AM dial.

They can, certainly, if given careful engineering and a reasonable signal. Rock and country are good examples. There isn't much in the way of quiet sections in rock and that helps. I'm not sure jazz would work as well because of all the subtleties. (Not that I've ever heard a jazz am. It's hard enough getting real jazz on FM.)

I don't believe so. Of course, Opie and Anthony aren't on the net as long as Uncle Mel believes that webcasts hurt radio stations more than help.

> Why else would Viacom/CBS loan out O & A to NBC and the WWF?

Oh, let's just say that two other Viacom properties are the other television outlets for the XFL.

Also, technically the XFL pre-game show isn't NBC--it's syndicated (by Titan Sports, McMahon's syndication firm), since it airs during access time. However, I would imagine that it's on NBC stations almost exclusively.

910. Re: Wireless remote broadcasting

Newsgroup: rec.radio.broadcasting
Date: 2001-02-17 06:56:48 UTC
From: comm <tripplemocha@yahoo.com>
Message-ID: <t8s85gogkarra8@corp.supernews.com>
Source record: 15622

If you want a really easy/quick/cheap/high quality solution, i would look into wireless lan hardware on the 900, 2.4 or 5.6 gig bands ... the 900 meg hardware is going for about $25/unit on clearance in some areas. 2.4 gig cards are going for $100-$250. the 5.6 band stuff is still kinda expensive, but the band is empty unless your near a naval base :-)

All you really need to do is get two PCs (400MHz or more with soundcard), two wireless lan cards, and perhaps two high gain antennas depending on the distance. You may also need some coax if it doesnt come with the antenna, and there are amps available commercially.

On one PC, install winamp and shoutcast which can be downloaded from http://www.shoutcast.com -- this is internet streaming software and it will allow you to take a live 44.1KHz stereo feed and encode it into mp3 format, the bitrate you probably want to use is 128kbps. There is support for unix flavors and windows. take your pick. This will be your remote end. Perferably, this is the fastest PC you have of the two. Over 400MHz will insure faster-then-realtime streaming.

Install winamp on the studio computer with the other end of the wireless link. Place the antennas in line-of-sight and troubleshoot the signal strength until you can get a good signal from the diagnostic software.

Set the remote computer wireless lan card's IP to 10.0.0.1 with a subnet mask of 255.255.255.0.
Set the studio computer wireless lan card's IP to 10.0.0.2 with a subnet mask of 255.255.255.0.
(There are many other IP addresses/subnets you can do, but these will work just fine)

once you got everything setup and running with good signal, type the following in an msdos prompt on the studio computer. type: ping 10.0.0.1

if you get replies, then your wireless network is working. no replies mean something is incorrectly configured. hit control C when you are happy and close out the software. If some are timed out and some are received, you may have a choppy signal to the other end. check out the wireless cards, the line-of-site being clear of obstructions, etc.

Start the winamp software on your studio computer, and open the location http://10.0.0.1/ and watch the magic begain! Test it for an hour or so, and make sure the link is stable and to your liking.

This entire setup will cost you under $500-$1000, depending on what is available to you. the software is free, the wireless link is unlicensed and free, and it will rival those commercial remote links! beats a dedicated cellular call, installation of a special T1 or ISDN, or perhaps a licensed

studio link, which the hardware can cost $1000-$2000 easy.

If you have DSL, cable, or some other high speed internet at the location you can omit the wireless part and do it over the internet! its very reliable and really fun to do.

extending the distance might be possible with power amps, and perhaps a small relay van to connect both your studio and remote which are either too far away or not line of sight. get a computer guy to build you a small linux-based router and plug in two wireless cards. You might even be able to use an access point.

give me an email if you need help or want me to give ya a call.. sounds like a fun project!

Know Thy Enemy: National Public Radio
by Philip Reynard
Copyright 2001

Linguists must have a name somewhere for that classic NPR voice: the unctuous, supercilious, studiously "impartial" monotone, the clipped Jewish "T"s diced off the palate with metronomic Eastern Seaboard fussiness, the gradual attenuation and smug lilt when one or another NPR harridan reveals another GOP crime. The nasal, whining , world-weary introduction to the NPR signature interminable political monologue delivered in excruciating detail by some horse-faced left-liberal know-it-all Vassarette Jewess: "Wellll, Bobbbb, as just _everyone_ in Washington _knows_ by _now," one pictures hairy Semitic nostrils aflare above a microphone, the morning's half-chewed lox dropping from the big braying taxpayer-supported teeth between pancaked age-spotted udders it'd be "bourgeois" to get lifted, ringleted severe anal-retentive hairdo that spews mousse and screams to a veteran psychoanalyst, "Look, asshole, I haven't been orgasmic in 20 years and I don't WANT to be!!!!" Just picture waking up with Linda Wertheimer for the next twenty years and hearing that keening, pedantic, split-oboe-reed voice reminding you to take out the garbage and wash the Land Rover and have you seen the latest "Tikkun?" and expect of you a half-hour-long digression on rabbinical opinions on the Wye River accords as long as she gets 27 minutes of it. It's enough to make a man puke. Which is why NPR surrounds its dry-cunt Kike coven with non-men like Bob Edwards, Noah "Shoah Business" Adams, or swarthy token Spic toads and "eddicated" niggers like Ray Suarez and Juan "Whine" Williams. They knows their place. Or the fey "male" correthpondenths NPR whisks off to DesMoines and Ann Arbor for breathless stories on homosexual marriage or nathty old coal mienth. Esophaghi rubbed raw by deep-throating their tops, lips and jaws apparently weakened by so many years of greedy anonymous East Village glory-hole cocksucking they can barely slobber out a coherent sentence, they're dispatched to Middle America to get the pulse of the nation they know so well. My ass. What they know about America, all of it wrong, they learned at Ivy League schools at the knees, probably _on_ their knees in front of, Marxist professors.
Ah, the voice of progressivism. If you're anything like me you flip to them while your favorite classical station is playing a commercial or a warhorse and you listen for a while with a mixture of contempt and fascination, amazed that people over 21 and out of college still believe this shit. Maybe you once believed it as I did, and unfortunately NPR, or their sister whore Public Radio

International, are the only "in-depth" and _relatively_ (I stress that) commercial-free news on the dial. You're a news junkie. I understand. I've been one. You feel you need to know what's happening in the Middle East or the latest developments in genetic engineering or intellectual copyright law or another nigger jazz musician has finished his last bottle of Thunderbird and NPR is doing his eulogy. You're horny for news and NPR is the only whore in town. I get it. No need to explain.

If you've been exposed to a non-collegiate environment for more than, oh, a couple of years; if you've ever lived _outside_ of a major urban center, maybe among whites, for at least the same time period; if you do, or have done, any manual labor in your life (and no, changing the toner in a copy machine or writing a thesis on Derrida don't count as manual labor); you're thinking to yourself, are these people so naive as to think that their left-wing bias doesn't SHOW? Can anyone apparently so smart really be so stupid? Just who are these people broadcasting to? or should I say for? Are there 12 . . .OK, let's say 20. . .people in this nation who can drive down the road furrowing their brow in agreement with some inane menopausal opinion of Susan Stamberg's, nodding in sympathetic outrage with Nina Totenberg's tart dismissal of a Supreme Court judgment that toppled her God Al Gore, are there people whimpering with outrage at the keening voice of some atheist faggot crying that Cleveland's school voucher program is still intact? Jesus, I can't picture it. I know a lot of people, right and left-wing, and I can't picture a one of them doing this. Now, I haven't been in a Manhattan deli lately, and I have more important things to do than follow a rescued Greyhound around Boston Common with a pooper-scooper, and I don't nap in my book-lined cubicle at Kent State University between teaching popular culture classes, and I wasn't in Seattle kicking in windows that union labor worked hard to build, so maybe I'm not representative of National Public Radio's audience. And thank God for that.

So we'll be generous and say there are, oh, 75 or 100 people in the country who listen *suppress gag reflex* religiously to Diane Rehm's call-in show, who think Diane is just the greatest political whore since Cleopatra and tell her that in their own simpleminded way every time they call in. It always sounds like the same 75 people anyway. And the grande dame slut of socialism, she of the spasmodic dysphonia, that hoarse Parkinsoned harridan voice, just slobbers and quakes her fawning adjectival antinomian asskissing so thoroughly on her loyal callers and her slimebucket left-wing guests that you gotta wonder how the bitch sleeps nights in the bosom of the country that not only gave the old slut everything she ever had but didn't lynch her. If you can picture Katharine Hepburn, Alan Alda, and Gus Hall rolled into a mealy booger, you pretty much have Diane Rehm. I nearly wreck the car laughing on the odd occasion when a ringer calls in, someone seemingly in her camp at first but who begins to politely disagree with the insipid equalitarian dogma of the old slut and starts undermining the grandiose, self-important persona she's took so long to build up. "NA" "NA" "YOU. . . .JU U UST WAAAAAAAIT ONE

MININININ IT THERE, SIR!" croaks the shaky old bitch in a nearly apoplectic fit of outrage that someone had DAAAAARRRRRRRRED to challenge Diane Rehm's version of liberal orthodoxy, "TH. . .TH. . . THIS JUST WON'T DO!!!" I pray for the old crone to have a heart attack, a burst appendix, anything, but she never does. Damn. Oh well. They'd just replace her with someone worse.

And how 'bout that Juan Williams, huh? Just who the fuck is he, anyway? What makes Juan's opinion informed or important? Did he run a banana stall in Puerto Rico, suck up to the right Jews at CUNY, what? Does he think the average American knows who he is? He's wrong. They neither know nor care, and most of them wouldn't listen to him for five minutes before happily replacing him with a foot powder commercial. See, in case you don't know, Juan replaced Ray Suarez, another greaseball of equally doubtful talents, as host of NPR's "Talk of the Nation." Talk of the nation my ass. Maybe, MAYBE "Talk of the African-American Faculty Lounge at Berkeley The Day No White Women Walked By So There Was Nothing Else to Talk About," or "Talk of the Closest Women's Restroom to the Gender Studies Department at Bennington During Sympathetic Menstrual Period Weeks." Nation, no. The nation's never heard of you, Juan, or your guests, or your issues. They don't care. They just pay you. Unwillingly, but that's what the IRS is for, I'm not complaining. Anyway, Juan sits at a mike and trades fawning compliments with anti-gun, pro-faggot, pro-abortion, Marxist-with-a-good-pension types, repeating the same tired bullshit about the nasty old white imperialist West that you heard at your liberal-arts college campus in the early 70s before you went out and got a real job. People under the same delusions call him and the guests up to agree that they're the only three or four people between Anaheim and Scranton who could run America on pure Leninist principles and make it a paradise on Earth were they only given the chance. It's a riot. Listen to it sometime if you don't believe me. They're really under the impression that people ARE listening to them, so maybe we'd better humor them.

I think Juan thinks that if his redeye flight between Washington and L.A. made a miraculous emergency landing in, say, Fremont, Ohio, and he was able to drag himself to the nearest open gas station that time of night, that the guy changing tires would say, "Wow! You're Juan Williams! Host of 'Talk of the Nation,' right? Man, can I have yer autograph? I loved your show defending the rights of young violent offenders!" Juan seems to think this is the case. He knows de heartland, you see. They even did a show recently "from the heartland," that's of America, now. I think they even titled it that. So they flew Juan to the most liberal college campus in, I think, Illinois, maybe Indiana, filled the auditorium with every pampered upper-middle-class idiot who could begin a sentence with "actually," and shipped in a couple of leftie Jew newspaper editors from a 200-mile radius to compliment the idiots on their intelligent questions before harrumphing what leftie Jew newspaper editors always harrumph. THAT was National Public Radio's idea of "The Heartland." Lemme tell you what the heartland is, Juan. You weren't in the

heartland. The heartland is towns out of which you and Ray Suarez wouldn't make it alive and where ugly crones like Nina Totenberg and Susan Stamberg couldn't get raped if they walked between biker bars on their knees buying drinks. That's the heartland. You don't know shit about America.

About the same 75 people call Juan who call Diane, after they've had a healthy lunch and a Starbucks and spent the first five minutes of the call effusively thanking Juan for being the Latino God that he is, of course. Now you'll find this hard to believe, but there appear to be people at home in America between 2 and 4 p.m. EST who have nothing better to do than call Juan Williams and offer up long-winded, pompous, usually effeminate, painfully articulate, invariably left-wing opinions on everything from national nuclear-targeting policies to midnight basketball leagues. It's usually either broads or faggots, and boy, they know everything. Not as much as Juan or his guests maybe, but they're at least third in the world. They sound spookily like NPR announcers. They sound like they've been ordered by their rabbi to hold a slippery shampoo bottle up their ass and balance the Babylonian Talmud on their head while they talk or they'll be cut off and left alone, as usual, to feed the cat and go back to wondering what went wrong with their second marriage. I always remember my dear old Dad telling me, son, if you want to get ahead in life, take all the advice you can of lonely intellectuals whose social lives and sense of self-worth are so degraded they have to confirm their existences by calling up likeminded strangers on radio shows and share their addled opinions with a couple hundred other losers gripped by racial and political guilt and usually paid by our tax money. NOT.

Now, if any of these assholes had real jobs, they'd be at them at 2:30 or 3 in the afternoon. Wouldn't they? Granted, a few of them are on car phones, which they never tire of pointing out if they are, but none of the car-phone callers sound like they're doing anything useful like industrial steel sales or driving bread trucks. Even if you have a real job that starts early and gets you home at, say, 3 p.m. on the inside, you have other things on your list than rushing to the kitchen phone and calling Juan Williams to tell him what you think Madeliene Albright should or shouldn't do about Kosovo, am I right? Sure I am. So you know these prissy jerks are probably 30- or 40-something lifetime students, sitting home in their kitchen all day still working on that thesis on Incan sexual symbology or Keynes' homosexuality while their wives are out breaking their asses supporting them. Or they're public school teachers home in time to watch soap operas as usual and listen to Juan. If it's a broad, she's some mouthy work-at-home real-estate agent or part-time public relations cunt who has an opinion on everything and has already exhausted the patience of every other cunt she could call that day. You know the type. She's the one in the Mercedes SUV with the cellphone glued to her head who just ran the stop sign at the cross street in front of you. She's probably talking to Juan right now about why YOU shouldn't own a gun, why niggers should live next to YOU, why

the state should educate YOUR child, why more of YOUR tax money should be given to Mexicans to spend on wine and lottery tickets and to the Corporation for Public Broadcasting and National Public Radio.
Only in America could a gaggle of Jews set up a radio network in the nation's capital, wrench open the taps of every charitable and academic foundation in sight for their upkeep, suck up $350 million a year of your tax money, and proceed to lambaste the U.S. for being a fascist garrison state. If there's a nigger somewhere who's facing Old Sparky for slaughtering six whites 15 years ago, NPR will find him and turn him into a misunderstood folk hero. If there's a redskin who fell down drunk on an icy sidewalk in front of a couple white cops, NPR will find him and interview him about police brutality. If an illegal troglodyte of any given nonwhite race isn't getting free housing and medical care, by golly, NPR had better know why not. If some Haitian crack dealer leaves nine loaded guns lying around his hovel and one of his offspring gets hold of one, it's the NRA's fault. If someone anywhere even looks at a homo wrong NPR will be there screaming about "homophobia" and "hate crimes," but if two homos tie up a 13-year-old boy and literally screw him to death, you can bet NPR had bigger fish to fry that day.
Just never you mind what's "wrong" with America, boy. The self-advertised "enlightened humanists" at National Public Radio will handle it. Let token goy Uncle Bob Edwards tell you what's wrong every morning, and "Ashkenazi Bob" Siegel croon to you at night. Messrs. Stern, Horwitz, Dvorkin, and Lowenstein in the NPR back office know what's best for you. Why think for yourself when Abramson, Adler, Flintoff, Gradstein, Schorr, and Siegel can do it for you? You've had a hard day. You're just a white guy, or maybe a white woman, rushing to get the kids at day care and wondering if there's macaroni and cheese in the fridge and whether the mortgage is going to get paid this month. What do you know about America anyway? A lot of these NPR people are sucking cock for high-powered Washington lobbyists, lawyers, government functionaries, and tenured East Coast college professors who happen to be their husbands or live-in boyfriends. They eat the same lobster in the same D.C. restaurants that Teddy Kennedy and Barney Frank do. They ride to the same cocktail parties thrown by D.C. socialite sluts in the same limos that the people giving them your tax money do. So you just take it easy, they know what's happening in America a lot better than you do. Just repeat after me: "Continued funding for the arts. Continued funding for the arts." You'll be fine.

Hiya Jim....sorry I didn't read this earlier.....KLUV-AM is now
KJOI and soon to be KTRA-AM....next time you plan to be in town,
pop me an email beforehand and maybe I can schedule a tour of the
place. The station is under LMA (Leased Management Agreement) between
Radio One (the current owners) and Clear Channel (who is buying it).
Current Chief Eng for the station is the same guy for 97.9 and 94.5
though I will be likely be assuming the duties of the AM when CC
is through buying it.

True. But remember, CC did not create most of their successful CHRs...they
simply bought them from someone else. Jacor's WFLZ/Tampa and Chancellor's
KDWB/Minneapolis come immediately to mind.

Both of these ideas are pretty unreliable. Part 15 FM would be so limited, it would be pretty useless. As for the issue of Family Radio, the bandwidth and duty cycle of these things would make them pretty useless for this application.

In addition, it is a shared service. Someone keys up on the channel, and you are gone. This is without addressing the legal issues of this, as RPU is part 74 and only allowed on certain frequencies. You would likely get mor mileage out of an RPU, or a Marti. They sell used RPU's. A 2 watt RPU with a receive antenna at the studio mounted outside would do you well. Just make sure you frequency coordinate the thing. You could also look at some of the Spread Spectrum RPU/STL units. However, the RPU solution maybe the best bet, and you could do it for under $2000. I would also think that for a campus, if the school owns its own copper, you could do an equalized dry pair for different sites, and with fiber, you can do FIBOX links for about $600 or so.

One can only consider one's self a true classical music fan if one can listen to the William Tell Overture and not think of the Lone Ranger.

| With all due respect,

A friend of mine renders that catchphrase as "With all due respect aside"....

| it is precisely that sort of "nose-in-the-air"
| attitude towards other forms of music that have turned so many people
| away from classical music - including many who would probably be willing
| to give it a chance, if it weren't for the perceived snootiness of many
| of its fans.

I really doubt that. I think it's lack of exposure more than anything else.

There *are* major disincentives for a new operator to fire up a classical format. The biggest are the potential listeners, who, in market after market, have shown themselves to be a perfectionist and quarrelsome bunch. But the station owners also haven't found a way to tap into that passion. Maybe there isn't one, but creativity and listener involvement have not been strong points of American broadcasting in recent years.

Don't care for his daily show, which I've heard broadcast here in Seattle, but "Albom on the Weekend" is pretty entertaining, IMHO. Certainly beats listening to someone ranting and raving over how the world is going to hell in a handbasket...

I wish they'd bring back Gil Gross nationally. I liked his show--a good mix of topics, plus he was able to address even serious issues without sounding like the voice of gloom and doom. Just sounded (on air, anyway) like a pretty affable guy. Does he broadcast locally somewhere?

Lori

I fear that you have a one-market view.

a) In many markets there are NO classical non-coms. If there is a
classical station at all, it is commercial.

b) Non-coms are also into ratings. WETA-FM dropped their AM-drive
classical music in order to carry NPR in hopes of more listeners and
income. NPR was already being carried in morning drive the same market
by WAMU. This leaves WGMS (a Bonneville commercial station) as the only
DC station with classical music in AM drive. People in the northern
part of the DC area can get WBJC, a 100% classical Baltimore non-com.

WAMU is heavily talk, with country music at other times.

Both WETA-FM and WAMU get at least a million dollars a year in listener
contributions. WETA wanted more.

> Austin: KQBT expands lead over KHFI.

KHFI-FM, which went on the air March 25, 1956 (Toscanini's 89th birthday) as Austin's first commercial classical music station, survived almost ten years before being bought out by interests who turned it into a pop station. It took almost two more years before the creators of the original KHFI launched KMFA-FM, a listener-supported non-commercial classical station that remains on the air after more than thirty years.

Back in 1956, I got my first FM tuner, a Heathkit unit that someone else had put together. I played this through an old 1940's GE console radio for a long time. To be sure, when it became possible for me to acquire a real audio system, the Heathkit went out. But I still hear classical music on FM, now even via streaming on the web. It's a new world out there...

Los Angeles jazz station KJAZ (1260, simulcast on 540) sounds pretty
good in my car, which has an exceptionally good AM tuner with AM
stereo. I just wish they'd run 1260 in stereo. (Of course, my
opinion doesn't count for much, since I'm not down there very often
<g>).

Our AM, in stereo, sounds great with country. Frankly, in the car I
prefer it to the FM. (KUZZ AM/FM simulcast).

A properly-engineered AM signal sounds almost as good as FM coming out
of the transmitter, the principal difference being the 10kHz audio
frequency limitation which is set by regulation, not by any physical
constraints of the medium. The main problem with AM is in the
receivers, most of which are junk, and pass far less audio bandwidth
than the stations are transmitting. And since lousy receivers are
the norm, many AM's have set their audio processing to compensate as
best they can, which can make them sound rather nasty on the few good
receivers that exist.

No, Peter, I don't think so. This interference is being reported as widely
as Alberta, Oregon, Arizona and California so far among DX listeners.
Additionally, it has a peculiar sound, and there is more info at
http://www.sharkk.com/1140 There is some speculation that this is perhaps an
OTHR transmission. It is not modulated with radio programming, but, rather,
with a strange warble tone. Since there is modulation, albiet with the
strange frequency shifting tone, it is not a hetrodyne, either.

WFKS was never marketed as a Jacksonville station. It was a Daytona Beach station, which happened to have a decent signal into Jax, due to it's 1200 foot tower near Bunnell, FL.

A 3.1 in the Jax book is great for an outside-market signal like this. In fact, it's better than they often did in Daytona Beach! (Which is why they changed formats last summer and are now country.)

96.5 would definitely do the dual-city ID if it became "Cleveland's"
Kiss FM outlet...the replacement for 104.9...presumably taking the
same air staff, etc. as 104.9 have now. And they'd get a much better
Cleveland-full-market (nearly) signal than they have out of Lorain
County now. Consider that many of the Cleveland market's radio and TV
stations sticks sit in Parma...and I don't know where 'KDD's stick is
now, but they could even move it up to southern Cuyahoga County
without missing a beat with the FCC.

I'm not an insider either (I do work for Clear Channel, but in
Sacramento, not Cleveland ;), but I think you're probably right with
the Kiss 104.9 -> 96.5 and then WKDD -> 98.1 scenario.

BTW - Kiss' morning show (Valentine) is voice-tracked from Los
Angeles... done by the afternoon jock on the original Kiss FM
(KIIS/LA). He does that for about a half-dozen or so other markets
mainly in the Midwest, including Youngstown (now 95.9 Kiss FM/WAKZ, my
former FM radio home in Youngstown when I was the overnighter at
then-95.9 WAX-FM). His biggest market now is Chicago...he's also on
Kiss FM in Pittsburgh. I believe PD Dan Mason and night guy Kasper
are 104.9's two local jocks...I know Kasper from AOL.

Indeed, it's been a real pleasure to have two jazz stations to choose from (KLON in Long Beach on FM the other). There are places in L.A. where KLON's signal is not very good, so KJAZ becomes even more important. I don't listen to "Smooth Jazz" KTWV, which has a great signal throughout Southern California, because, as I told a colleague, I'd rather hear Charlie Parker in AM mono than Kenny G in the most glorious digital FM stereo.

I think you've confused two WFKSs -- the old WFKS on 99.9 Palatka/Daytona
Beach is probably what you are thinking of (now country WGNE-FM). The
WFKS calls are on 97.9 St Augustine now, which definitely is marketed to
Jacksonville now and previously as smooth jazz WFSJ until it was flipped
to WFKS 6-7 months ago.

It should be easy to find, just gather a bunch of bearings for it
by aiming a portable radio to null it.

They come with built-in directional antennas.

Move across town a couple of places and see if the bearing changes.

If so, draw the lines on a map and see where they cross. Then go
there and try again.

If there's no change, call a friend in other cities and get bearings
among those who can hear it.

> "Look, asshole, I haven't been orgasmic in 20 years and I don't WANT to be!!!!"

Boy have I been missing the point. I've been listening to NPR for as long as its been around.

When I think of all those man-years I've spent listening to all these hosts, anchors, and reporters and never once speculated on the dryness of the female's cults or the sexual proclivities of the males, it just boggles the mind.

It just goes to show you how one can overlook what's really important by concentrating on minutiae like the things they're reporting about, or the ideas they're espousing.

What is sad about this, is that you could have written a really good piece, one that somebody might actually want to plagiarize, hence the importance of that copyright notice right up front.

There is a sound to NPR that is like the BBC with a big phoney nose, and there's a method to their story selection that would be delicious to lampoon.

But instead, the best you could do was a laundry list of racial slurs and epithets, religious slams, and sexual personal attack.

In the end, it says far more about you and the dark recesses of your tortured little mind than it does about the folks at M street. You will no doubt get a good deal of hate as a reflection of your hate; maybe that's what you want.

But you have my pity and sympathy, and in a strange way, your post made me feel good. If somebody had to turn out tortured, sick, and bitter, fixated on the sexuality, race, and religion of NPR's announcing staff, far better it be you than me.

When you have a heavy spotload, a symphony can really screw up your program schedule. If you sandwich spots between the movements, your audience goes right through the roof. If you try to run 26 minutes of commercials after the 90 minute classical work finishes, your audience goes right out the door.

When your only choices are works 10 minutes or less, you wind up playing Ravel's Bolero a whole heck of a lot! Then the cry is that you've gone POP!

Los Angeles used to have KFAC AM&FM, a class act. But KUSC and the other public stations pretty much closed them down.

The world must be different in California. That thousand miles of desert to the east of you must reduce the number of interfering signals.

The main problem with AM here in the East is interference. I can only get approximately 4 local AM signals at night where the interference is at least 40 dB below the desired audio. Three of the four local legacy stations do not pass that test, and I'm about 10 miles from their transmitters. (1 Class A, 2 class B) And this is on a car radio - narrow. A broadband radio needed for good audio would be hopeless at night, and not so great during the day at my location.

I sometimes listen on a wideband AM radio about 3 miles in "front" of an AM music station, and they are fine at that location, but I don't live there.

4 Towers with a bananna shaped pattern SW and SE with a hump to the
north....50KW Harris TX (and where I got my dog :)

> As I have related before at one time all 12 towers were lit. Today only 6
> of the 12 blink at night.

Actually only the north and south towers flash...the other 4 only
have a top lamp burning but no flash..the pattern of the lighting
is in a zigzag pattern....such as

EAST
F D L D L D

L D L D F South --->

WEST

> Interestingly 3 communications towers have been built about 2 miles away to
> the west and are in the main lobe of the night site. I understand that they
> do distort the pattern and they apparently are not detuned.

The last proof of the array took them into account...the pattern is
not 100% what it used to be in the old KLIF days but it has the FCC's
blessing from what I read in the documents at the site..

Thanks to everyone for their suggestions. After reading these replies, and talking with several other people (thanks John D!), we're actually looking at a wired solution instead. Our college, being a "tech school", has a very good telcom infrastructure in place. There is phone and 100 meg ethernet in all locations, and about 60% of the campus has fiber (including our studio) as well.

Utilizing the telephone or ethernet lines seems to be the best bet, as it would give us complete campus coverage. We do have a proprietary PBX system, so that may complicate things on the telephone end. Any more ideas (other than getting a laptop and streaming it back to the studio)? Thanks again for all of your suggestions!

CAROLINE SOUTH PRESS RELEASE 13th February 2001

A musical odyssey begins on Saint Valentine's Day 2001. Each and every Wednesday Radio Caroline, the station of love, peace and good music; launches a new European evening.

From studios in the Ancient Principality of Seborga perched on the Italian - French Riviera border, legendary presenters of Radio Caroline's alternative 'Overdrive' evenings re-ignite the magical vibe that resonated Europe in the 70s and 80s.

Inspired by a spectacular view overlooking the Mediterranean and Caroline's legendary spirit of freedom, Tom Anderson, Rob Harrison and Mark Dezzani concoct an eclectic and mood grabbing mix of classic and contemporary rock, reggae, soul and funk.

Wednesday evening's Caroline South programmes are produced by Europa Productions. EP produces new music and cultural multimedia projects for the converging age. Cutting edge content for TV, Radio, Internet and Press.

Our collaboration with the irrepressible and mythical Caroline organisation represents one of many steps that Radio Caroline has taken in the past three years to re-establish itself as a major music pioneer in the digital age.

Radio Caroline can be heard 7 days a week on the Astra satellite across Europe, throughout North America on the Satcom bird and around the world on the Internet via its new anchorage in cyber-space.

While it is true that Federal Regulation has precedence over State law, this does not mean that local jurisdictions cannot regulate certain activities of federally licensed facilities that the feds don't choose to regulate. An example would be local zoning regulation of studio and transmitter facilities, which, except in some clearly defined circumstances, the FCC permits.

Whether the feds would have a problem with state government requiring each station to have a copy RR's tape is unclear, but the state certainly couldn't require that the station actually play the tape in an emergency since federal regulation of both the EBS and EAS systems clearly states that participation in local emergency programs is voluntary.

Last Monday & Tuesday, I was in the Chicago area, driving a rented Chevrolet which appeared to have exactly the same radio as my "Regular" car, a '98 Chevy Tahoe. While dial surfing, I happened across WAIT, an AM "Standards" station that really got my attention because it sounded almost as good as FM in my rented car. The highs were a bit rolled off, but none the less present. Bass was natural and smooth. I was shocked. I sometimes listen to KAAM in Dallas on a similar radio. It sounds about like my answering machine. The programming is very similar (although I think WAIT was a lot better station, but that's another topic).

Does anyone have some insight as to why this station sounded good? I know AM is certainly capable of decent frequency response, but I've seldom heard it.

Chuck

That's a very good idea, Ron... An "Internet Triangulation" technique, of sorts. I'm near Kankakee (south of Chicago) and, since reading about this signal on this board, I've been able to faintly hear it underneath WRVA Richmond. Next time I catch it, I can post the max reception axis (between the nulls) in terms of degrees.

Let's say I picked it up best at 235° and 45°. We could rule out 45° because nobody else has reported this east of me. All we need are two other well-spaced reports and should be able to narrow it down. By the way, the 235 I listed was just a sample. I'll find out for sure tonight, tomorrow, or the next time I catch the signal.

No; CPR bought KKYD-1340 AM (coincidentally the place where KVOD was born eons ago) and all local reports here in the Denver area say that the KCFR schedule of NPR programming etc. (and calls) will go to 1340 AM and that the 90.1 FM frequency will become the new KVOD with the music library and calls donated from the old 1280 AM. Makes logical sense to get the news/talk etc. off of FM to make way for the classical music. CPR is also trying to purchase KUNC-FM in Greeley but there is local opposition to that and that may very well not happen.

961. The NPR crap... why the replies are being posted

I got some more posts on this stupid thread, from people on, ummm, the opposite side of the argument from the side most of us are on, and debated about whether or not to post them.

Basically, I decided to post them because I already posted a bunch of messages on the subject anyhow, and I'm not much in favor of having a bunch of people yelling at me because their stuff didn't get posted (and they will know; these messages are crossposted into the same groups the others were). I have enough to do tomorrow without having to deal with more crap from people I really have no desire to talk to.

Flame me if you must. If you're going to followup, however, please direct posts away from rrb, and don't post the followups to rrb either. Thanks.

>former FM radio home in Youngstown when I was the overnighter at
>then-95.9 WAX-FM). His biggest market now is Chicago...he's also on
>Kiss FM in Pittsburgh.

??

There's a Kiss in Pittsburgh?

I thought CC owned B94, which was already CHR.

>I believe PD Dan Mason and night guy Kasper
>are 104.9's two local jocks...I know Kasper from AOL.

Um? Howbout Keith Hotchkiss and AJ?

AJ actually does double duty on the weekends, or was, anyhow, working
afternoons at Mix 106.5 and evenings at Kiss 104.9 -- or maybe it's the
other way around.

I think they just hired a female jock also.

For quite some time, Dan Mason and Kasper *were* 104.9's only air staff. For
almost a year, actually, they had no one - and I figured that was because CC
had to wait for their lease to be up before they could make whatever changes

they wanted to make to their Tower City studios.

I don't know what WAIT does to get such a good sound (expecially for what I believe is a 1kw daytimer), but I believe that they and KAAM both use Westwood One's Standards format. Corrections appreciated.

Talk to the folks who built the PBX system. If they have the bandwidth
available, they may be able to configure a higher-than-POTS quality audio
connection. All you really need to do is haul voice audio right?

974. Hubcap Radio on WPTR-AM Albany?

Newsgroup: rec.radio.broadcasting

Can anyone tell me more about a syndicated program called "Hubcap Radio"? It's a West Coast-originated show of largely 50s-60s r&b/blues/rock&roll/pop (not ordinary "oldies" fare), apparently being picked up now on Saturday overnights in the eastern US on WPTR-AM ("Legends 1540") in Albany NY and another station in Rochester. All the other outlets are in the western US.

>

If KAYD wants to cover the Houston market, then they will have to move their transmitter, boost their transmitter power, or construct a Houston translator site.

I tuned to 97.5 MHz after I saw the first message on this subject. Here in Fort Bend County, I could not pick up a thing...

Paul.

There are many historical accounts of this. I think it is generally agreed that WFLA-WSUN had the first when they were court ordered to protect WTMJ on 620. Here is an excerpt from the Broadcast History section of the Broadcast Archive on line at www.oldradio.com
<><><><>
22a) Where was the First Directional Antenna installed?
Designed by Raymond Wilmotte in 1932 for WFLA-WSUN, Clearwater, FL on 620 kc to protect a Milwaukee station, Wilmotte's directional used lengths of transmission line for its phasing elements. WDAE in Tampa soon followed with a directional designed by Dr. George H. Brown of RCA, using lumped constants in a cabinet for phasing elements. By 1933, WOR, New York had the first directional designed by Bell Labs to reduce "wasted" power over the ocean and redirect it over land.

"JayScott16" <jayscott16@aol.com> quotes Bill Harris <billharx@flash.net> 'n sez:

> >WMAQ became the Chicago outlet
> >for CBS.
>
> As a fomrer WMAQ staffer, I missed this part of the history lesson. I did know
> that "A & A" moved there. When did the move to NBC occur, and how?

...actually, in a sense, "Amos 'n Andy" started at WMAQ. Since January 1926, Charles Correll and Freeman Gosden were already doing a similar program, "Sam 'n Henry," for the Chicago Tribune's WGN, but management there refused to syndicate the program. Gosden and Correll quit WGN as soon as their contract ran out and struck a deal with WMAQ (then a CBS affiliate owned by the Chicago Daily News, one of the Tribune's bigger rivals) to do "Amos 'n Andy," basically the same voices under different names, starting on March 19, 1928. (WMAQ's technical logs for that night supposedly show a note to the effect that the CBS network line could be heard faintly underneath the premiere broadcast of "Amos 'n Andy.") The show was a daily 8-minute serial syndicated to about three dozen other stations via transcriptions...

...The series was picked up on July 27, 1929, by NBC's Blue Network through a special arrangement with WMAQ, which itself continued to be a CBS affiliate; the main point of motivation to strike the deal was the new sponsorship of Pepsodent. At that time, NBC had several affiliates carring their shows (WCFL, KYW, WGN and WIBO), but no primary affiliate. NBC acquired a majority share of WMAQ stock in 1931; the station's last day as a CBS affiliate was that October 31st, with NBC's Red Network taking over the following day. (NBC had purchased WENR for its Blue Network earlier in 1931.) "Amos 'n Andy" did not appear on the CBS network until April 3, 1939; it switched over from NBC after Campbell's Soups replaced Pepsodent as the sponsor, and Campbell's had a much closer relationship to CBS than NBC. The show continued on CBS through the end of its run as a daily serial in 1943; the serial version was mainly done in by declining ratings and wartime rationing of tin (causing Campbell's to have to cut back on the production of their packaging)...

...when the show returned as a half-hour weekly sitcom on October 8, 1943, the new sponsor was Lever Brothers, and the show returned to NBC. CBS bought the series outright in 1948, with Bill Paley hoping to turn it into a TV series (which it did in June 1951, lasting until June 1953); the weekly sitcom version lasted on radio until May 22, 1955. Gosden and Correll then basically played Amos 'n Andy as disc jockeys on a daily 25-minute show from September 13, 1954, to November 25, 1960. In all, the show was syndicated

for just over a year, an NBC program for about 15 and a CBS program for
another 17...

wouldntch@like.to.no (Philip Reynard) posted:

"Know Thy Enemy: National Public Radio "

(remainder of ignorant blather snipped)

Well, its been a long time since we've seen such a nasty, vitriolic post darken this newsgroup. I'm all for people having the right to express themselves, but most reasonable folks would consider such a message either borderline libelous, or symptomatic of impending mental illness and mental collapse. Being in a generous mood today, I will hope for the latter, and that this individual will get help soon, primarily of the medical kind. Its a real shame that the same thing that is great about the Internet, the ability for anyone to communicate with a bunch of people of all kinds, unfortunately also gives voice to those who long ago lost the ability to carry on a civilized conversation, and who have undefined gripes against society in general, and choose to express themselves in a manner such as...well, this. I've long ago stopped attempting to have conversations with closed minded people like this, who, as one other poster has already observed, gives genuine conservatives a bad name.

I used to work for NPR, as a news producer, and from time to time, I've written in to set the record straight when these exchanges de-volve into, well, stuff like we hear from Reynard. And, when there aren't enough reasonable people like Jerry Trowbridge to step in and refute this kind of nonsense.

- NPR does not own stations. It never has and it never will. Stations affiliated, or who are members of, NPR, are owned either by colleges and universities (WAMU here in Washington, for example, owned by The American Universities), or by local, not-for-profit organizations designed to own and manage public broadcasting facilities (i.e., WETA-FM, owned by Greater Washington Telecomminications). In the U.S., it distributes its programs via satellite to member stations; overseas, it runs, in conjunction with its competitor Public Radio International, "NPR Worldwide", a satellite-distributed feed of public radio programming that is heard on Armed Forces Radio & TV, and on local stations in Europe, Africa, and SouthEast Asia.

But it doesn't own stations. Please get that straight.

- NPR, (the people who produce the news and cultural affairs programs, and who also operate the public radio satellite system on behalf of all public radio stations and program producers) answers to a board of directors composed primarily of public radio station managers, and others. Since it doesn't own the stations broadcasting its programming, there is no possible

way in which it can influence such things as format changes, frequency shifts, etc., on the stations that carry its programming. Those are the decisions made by individual stations and their managers, just as WETA-FM's decision to stop carrying classical music in morning drive, in favor of 'Morning Edition', was a local management decision.

That said, what is happening out in Colorado is generally happening in all of the radio business in general. Seems no one blinks an eye anymore when Disney/ABC; Cheap, er, ah, Clear Channel <g>; or CBS/Infinity/Westinghouse/Mutual, et al does the equivalent of re-arranging the deck chairs on the Titanic by moving formats within markets, wiping out entire staffs of management and talent, and generally making a muddle of radio market after radio market.

All Colorado Public Radio is engaging in is allowing a high-fidelity, high-quality FM signal to carry music, and moving its news/talk/public affairs programming to an AM station. Properly engineered, the AM should be able to continue serving listeners in a satisfactory way. I hear there may or may not be plans to either acquire, or make arrangements to transmit news and public affairs programming on the Boulder FM station; I don't know. Depending on who you talk to, that deal is, or isn't happening. I haven't been in the Denver/Boulder area in a long time, so I can't comment on how the coverage of the new AM will work out for people who want to hear NPR programming in, say, a high-rise in downtown.

I think its fine for people to argue any format/frequency shift on its merits, but, at the very least, get the basic facts straight.

Reynard, don't bother to respond to me, you are on my e-mail bozo list already. Everyone else, thanks for listening.

980. WNIB: All Madonna All the Time?

Newsgroup: rec.radio.broadcasting
Date: 2001-02-20 16:54:19 UTC
From: supernews <milbratzNOSPAMYOULOSER@hotmail.com>
Message-ID: <t9589rb6dcp196@corp.supernews.com>
Source record: 15491

This WNIB thing is weirding me out. (WNIB is the classical station here in Chicago that just switched its format).

I still have it on my presets so occasionally drift there out of habit and, now, curiosity. Last week they played Country music--some of which sounded pretty good (a la Bloodshot records).

But today it was *ALL MADONNA!* Papa Don't breach. Lucky Star. The Material One in her Eighties-synth glory.

What's with this transition?
It seems a no-brainer that Bonneville should launch a hip-hop station considering a) hip-hop's wide appeal in the I'm-suburban-but-I'm-jiggy-13-27-year-old-male demographic and b) 97.1's juxtaposition to B96. (Didn't that "center of the dial" real estate help drive the price so high?)

Hearing all Madonna--sans announcers--reminds of the early days of FM (I wasn't around. But I heard it was quirky) Also, some radio station in Floriday launched an "All Led Zeppelin, All the Time" format back in the late 80's/early 90's. It lasted about a week. It's definitely doesn't sound like Big Media.

981. Re: AM Sound Quality

KAAM 770 KMKI 620 and WBAP 820 in Dallas-Fort Worth all sound very close to FM on my early 1990s Delco AM stereo radio. Some stations do a lot of equalization to sound good on a typical AM radio with frequency response to 3300 Hz. Better AM radios that meet the AMax standards (such as GE Superadio) and stereo car radios have decent frequency response up to about 8 or 9 KHz.

Station maintained by a competent person who cares? AM can sound quite
good if one uses a good wide band receiver. One can modify an AM radio
for wider bandwidth (at the expense of sensitivity) by adding about 10Kohm
resistors
across one or more IF transformer tank (LC) circuits. This lowers the "Q" of
these circuits, making the resonance broader. And thus allows more high
audio frequencies thru (high audio frequencies are further from the station's
carrier).

They broadcast through yahoo, which doesn't always keep up with call
letter changes in their listings. Reviewing my notes, smooth jazz
WFSJ-FM changed to top 40 last March. They changed calls to WGNE-FM
in June and then swapped those calls with WFKS 99.9 Palatka in July.
According to the FCC call sign system and databases there, the
WFKS calls are still on 97.9 as of today.

The calls changes were arranged as part of the Clear Channel/AMFM merger.
Clear Channel spun off WGNE-FM-98.1 Titusville/Daytona Beach to a
Spanish-language broadcaster. The folks at WFKS were interested in the
WGNE-FM format. Clear Channel pulled the WGNE-FM calls to WFSJ (98.1
changed to WNUE-FM) just prior to spinning it off as a holding place
to allow the later swap of the calls.

you are looking at he project like an accountant would

step back and look at it like a broadcaser.

where are we now

if the station is billing $20,000 a month and sells 80% of 10 units an hour 6am - midnight then you are getting a yeild of around $4.50 per spot.

hopefully your costs are less than 20,000 a month because the value of the station is 3 to 5 times the annual profit after paying everyone including youself if youre going to work there, before tax deprec and interest.

now where can you take it?

how many people are there in the coverage area?

multiply that by $50

thats the potential for radio in a small market.

yes 100,000 people are good for $5m a year.

how many stations are competing for the bucks?

divide the dollars by the number of stations.

how much is the station getting now?

is this better than average? yes/no

why

the answer may help you decide to buy or not.

an above average performer may be a good investment.

a below average performer may be cheap to buy and may be turned into a bigger profit as a return on investment [yeah we're back in accountant mode]

no matter what the station has in he way of gear it's only worth what it can produce by way of profit.

now do the market analysis.

is the station targeting the people who live in the coverage area who have the money to spend.

[one guy I talked to had a #1 station making nothing because the listeners had no money]

if yes then you dont have to change much

if no then you need to know a lot about radio.

Accountants hire PD's and Consultants and Talent.

Broadcasters Manage such people.

oh and the rate card..

you dont need one

the best performing stations price each schedule individually on a demand driven system which gives each customer what they want for what they are prepared to pay.

last station I managed went from $20k a month to $80k a month in 4 years using just such a system. If the break even remains about the same or only rises a little, think what happens to the bottom line.

You can buy a system, but we just used some excel spreadsheets, figured out where we wanted it to be and worked to get it.

funny thing is we did not make any changes to the format. Unless you have a real turkey most stations perform OK, and a bit of work will soon reveal that in most cases stations are undersold by everyone who works there.

If you do plan changes do it slowly and carefully.

I once got hauled in front of the manager for filling up all the avails on mid dawn. The "investigation" revealed every spot was paid, not a freebie, and as it happened the programme really worked, the biggest problem being that the guy who presented it, and who initiated the complaint, did not believe how good it was.

If you are a member of RAB get a copy of the Megarate$ video.

It changed my life.

Chuck,

Was it an AM Stereo in the rented car in which you rode? I've found that when you have a decent AM receiver in the vehicle, AM DOES sound a little better.

While it is true that Federal Regulation has precedence over State law,
this does not mean that local jurisdictions cannot regulate certain
activities of federally licensed facilities that the feds don't choose
to regulate. An example would be local zoning regulation of studio and
transmitter facilities, which, except in some clearly defined
circumstances, the FCC permits.

Whether the feds would have a problem with state government requiring
each station to have a copy RR's tape is unclear, but the state
certainly couldn't require that the station actually play the tape in an
emergency since federal regulation of both the EBS and EAS systems
clearly states that participation in local emergency programs is voluntary.

It is the Las Vegas 1140 station, as identified by numerous members of the National Radio Club. Spurs on 1136 and 1144 beating against any local 1140 in the Western US at night. A DXer in the market with an analog receiver was able to hear the two spurs on either side of the carrier.

It's because of deregulation. When a friend of mine called the Kansas City FCC office to complain about the quality of a Des Moines AM station, he was told that they don't care, as long as the station is not causing interference to another stationa and gives a legal ID once an hour. In other words, a station could run a format of "AC hum" and it would be ok by the FCC, as long as they have a legal ID.

>I believe that they and KAAM both use
>Westwood One's Standards format.

KAAM is local originated at least some of the time as far as I know. They may use satellite delivery for part of their day. (I'm sure someone on this NG knows way more about this than I do).

I too thought WAIT was a Westwood One affiliate, but they did a good job of masking it if they are. Maybe they have portions that are local. I never heard the ubiquous "It's eighteen minutes before the hour..." I was listrening about 10-11 AM on Monday. BTW, they are indeed a daytimer.

Even though both stations played some pretty insipid music from time to time, I was very surprised at how good WAIT actually sounded... fidelity wise. Maybe it was just a good car radio. It was hard to make a comparison, since most other Chicago AM's were just talking, uslually in Polish, or some other language that I am unfamiliar with.

Still curious...

Chuck

It's good old-fashioned stunting while Bonneville gets the new format (whatever it is) in shape. Here's what they've done so far:

2/12--Barbra Streisand
2/13--Garth Brooks
2/14--Rolling Stones
2/15--Beach Boys
2/16--Frank Sinatra
2/17-18--Traditional, acoustic blues (probably some Rhino Records box set--a surprise for me--when Robert Feder said in the Sun-Times that they were going to do blues, I was expecting "Sweet Home Chicago" every hour on the hour)
2/19--Madonna
2/20--Pink Floyd
2/21--Motown (Supremes, Temptations, Marvin Gaye, Jackson 5 greatest hits albums)

Tomorrow--who knows? Considering that they could've played "Oops...I Did It Again" continuously for a month, we should thank God for small favors.

They have a construction permit to move to a 1955' tower near Winnie
(59 miles east of Houston; 31 miles SSW of Beaumont) and keep 100 kw.
They will join KOVE 93.3 Port Arthur, KTJM 98.5 Port Arthur, and KXTJ
107.9 Beaumont as Beaumont/Port Arthur FMs that have moved to a big
stick between Houston and Beaumont.

In the mean time, they are still operating on their licensed facilities
(100 kw off a 469' tower 10 miles east of Beaumont, near Vidor).

It is interesting to notice that Cumulus has got outlets in the adjacent
market of Lake Charles. One of those -- country KYKZ 96.1 Lake Charles --
has moved to a 1200' tower between Lake Charles and Beaumont (NE of Orange;
37 miles ENE of Beaumont; 23 miles WNW of Lake Charles).

In my earlier solution, suggesting the part 15 stuff, I was thinking back to my old college radio days and some of the things we had to do. Also, we were strictly an AM carrier current type operation with transmitters located in the various dormitories and transmitted through the power lines. We came up with some real creative solutions to our challenges.

As a licensed station, I'm sure you could use remote pickup equipment as some of the the writers suggested. If funding is a problem, I've seen used Marti equipment at ham flea markets and auctions going for next to nothing. Most of it was tube type equipment, but I have seen some solid state too.

Ouch, my eyes...

Even if every station in California had a copy at the time, they wouldn't have one now. Reagan left the governor's office over 25 years ago. That's plenty of time for stations to throw away, tape over, and/or lose old tapes like that. Happens every day.

Maybe you'll get lucky, and someone will respond that has one. Probably not likely, though, since you've been asking over and over for quite a few days - if someone had one, they'd have responded by now, I'd think. Should've dubbed it when you had the chance...

Paul, if you mean licensed broadcast stations, I would guess that it would be WNYC in New York, a municpally owned station that goes back to the 1920s. There is also a station at the University of Iowa (I think) that goes back to the same decade. But, remember that in the 1920s the rules for amateur radio operators were not as restrictive as they are today. "Hams" were permitted to use frequencies in the vicinity of 1500 khz when, in 1922, they were "banished" to the "useless" wavelengths of 200 meters and down. Several in sparsely populated inland areas were allowed to mix it up right in the middle of the broadcast band. And broadcasting was permitted, even encouraged for amateurs. Broadcasting by amateurs today is severely restricted to bulletins of interest to the amateur radio community.

However, I do not know if any of them operated AM phone or when they were first permitted to run AM phone. If it was before the debut of WNYC, then the honor would go to amateur broadcasters of the early 1920s.

>Was it an AM Stereo in the rented car in which you rode? I've found that
>when you have a decent AM receiver in the vehicle, AM DOES sound a little
>better.

The radio made no indication of being Stereo. As far as I know, the radio appeared to be identical to my '98 Tahoe's Delco factory stereo, which sounds quite good on FM, Tape or CD. This vehicle in question was a 2000 Chevy Lumina, but the radio looked and operated just like the '98. It made no indication of AM Stereo on the dial (I looked).

I've heard AM stereo at a demo at NAB several years ago. I was quite impressed then. It really sounded good. My previous car did have an AM stereo radio, but here in Dallas, it did not live up to my expectations. I think GM and other car manufacturers gave up on the AM stereo option a few years ago, but I could be wrong about that.

None the less, WAIT sounded very good in my rented car. I'd listen to more AM if it all sounded that way. I'll bet I'm not alone.

Makes you wonder if IBOC wil be worth the hassle. Somehow I doubt it. IMHO, broadcasters are just being soild a bill of goods. I hope I'm wrong. In the mean time, I'd rather listen to GOOD analog radio.

Chuck

All that really needs to be said, Max, is that this post was cross-posted. If that wsn't bad enough, two of the groups it was cross-posted to were "White Power" groups. Need I say any more?

Of course, considering that the extremists on the other side have been attacking NPR for selling out to evil corporate AmeriKKKa ever since the Gulf War, more and more I'm thinking that any organization that pisses off extremists on both sides must be doing something right.

My worries about public radio is that in exchange for larger audiences, it seems to be losing some of its quirkiness and its willingness to serve *very* unserved audiences. The latest example is in New York, where WFUV, the Fordham University-owned station that's morphed in recent years from a typical student-programmed college station to a paid-staff AAA format (and

an NPR associate membership, meaning they only carry the hourly newscasts and some shows like "Thistle and Shamrock"), recently dropped a long-running Saturday night polka show and a German-language program for two old-school free-form shows hosted by two veterans of WNEW-FM's glory days. Although some Polish polka fans have claimed "racism" in 'FUV droppoing the shows and keeping Saturday and Sunday blocks of Celtic programming, supposedly the polka and German-language shows were pulling very small ratings and not getting the station's target demos, unlike the Celtic programming, which does well ratings-wise (in the non-com sense).

Now considering that 'NEW-FM is now a testosterone talk station and no one on the commercial side's doing anything near an intelligent approach to rock music, I have no qualms about 'FUV putting on Pete Fortunale's "Mixed Bag" and Vin Scelesa's "Idiot's Delight." I just wish they could've found a way to keep the other shows, too. The polka show, in particular, had a devoted audience who had been listenting to it for years--and it *was* getting a rating, not a hash mark. In my mind, the only time public radio should cancel a show based on ratings is when it's only getting a hash mark. If the polka show and the German show were pulling their weight at pledge drive time, they should stay on the air.

All in all, another reason why public radio should take a long, hard look at itself--and it has nothing to do with politics.

But today it was *ALL MADONNA!* Papa Don't breach. Lucky Star. The Material One in her Eighties-synth glory.
What's with this transition?>>

Sounds like they're "stunting." Stations have been doing this for years before changing formats. It usually means that the old air talent has been let go but the new jocks aren't yet ready to be rolled out. The stunts can be entertaining, amusing or mind-numbing -- it doesn't matter to the station, since it's not selling ads for the stunt format.

<<It seems a no-brainer that Bonneville should launch a hip-hop station considering a) hip-hop's wide appeal in the I'm-suburban-but-I'm-jiggy-13-27-year-old-male demographic and b) 97.1's juxtaposition to B96.>>

Isn't Bonneville at least partially owned by the LDS Church (Mormons)? Most of Bonneville's properties are soft ACs or talkers. I can't imagine Bonneville wanting anything to do with hip-hop.

There are still a few shining lights out there. WLNG in Sag Harbor, Long Island is the classic example: live 'n' local 24/7, community-oriented to a fault, full of classic 60s jingles, lost dog reports, swap shop, you name it. (I was just out there last week; what a neat place!)

But there are others, too. WIRY up in Plattsburgh, NY is a similar retro-feel station; WKTJ-FM in Farmington, Maine seems to be well regarded by those who've listened; WQDY/WALZ in Calais and Machias, Maine is another Pine Tree State example. New Hampshire has WNTK in New London, with Americana on the AM side and talk (local and otherwise) on the FM. In Bennington, VT WBTN(AM) is being reborn as a truly local shop. Here in upstate NY, there's WMCR AM-FM in Oneida, super-serving its niche market between Utica and Syracuse. Last week, I got to hear a little of WEEU 830 Reading PA, with a live, local jock on a Sunday afternoon -- yes, playing music on AM.

And that's just in the northeast...

Since Scott is deciding to continue the sea of lies that the Tampa Bay Radio Board has evolved into, I feel the need to set the record straight.

Radio-Info.com has indeed shut down its Tampa Bay and South Florida boards, but it has nothing to do with Bubba the Love Sponge. We no longer have the time to devote to developing a forum full of slanderous comments made towards many members of the Tampa radio community. When the forums we operate are no longer fun to read, informative, and a chore to moderate it's an easy decision to pull the plug.

To the many posters who attempted to create a viable forum for discussion of Tampa Bay and South Florida radio, I'm sorry that the few classless posters had to ruin it for everyone. It's not too hard to setup a board on the many free messageboard services out there, and I hope that someone is willing to step up to the plate to cover the void we have left, just be careful that you may soon realize why we created that void in the first place.

Radio-Info.com's other 20+ messageboards are still operational with much more content coming soon.

I'm trying to play my MP3 CD's from my portable player over my car stereo. Radio Shack has some small FM transmitter that hooks into my headphone jack and transmitts over a choice of 4 frequencies to my car receiver. It sucks!! i had to wrap the transmitters antenna around my car antenna to get good reception. The freqs i had to choose from were too close to used freqs. I found this http://www.internet-promotions.com/cew-electronic/tech.html does anyone know about it? Can anyone offer another idea?
Thanks!

I would suggest that would be nearly impossible to answer.

My understanding is that there was no such thing as a non-commercial license before WW2. Stations could choose to operate without commercials, but they would hold the same type of license as those that did air spots. It wasn't until the FCC began reserving certain FM channels for non-commercial operations that there came to be a distinction.

It is worth noting that the sale of commercials was NOT the financial justification for the very first radio stations owned by for-profit firms. The idea of selling advertising time for a profit took a few years to get going. KDKA, for example, was built to provide a reliable source of good-quality programming which would induce Pittsburghers to buy radios from the station's owners. So you *could* count KDKA as a non-commercial station, even though it later began airing commercials.

The University of Wisconsin's station 9XM, later WHA, is certainly the best-known of the early stations operated by educational institutions. It's hardly the only such station.

We've got a couple stations here in Des Moines that are for the most part just running the barter spots on their satellite program services and PSA's. It seems to me that they are wasting electricity.

I have come up with a more exciting format than the AC hum. How about simulcasting Taxi cab calls?

I do the same thing in California, and its very discouraging nowadays. The only long-distance I can get anymore is KSTP-St. Paul and WOAI-San Antonio, and I wouldn't classify them as DX. As far as the cities you have mentioned, I have received the following from California. I will dispense with call letters and just throw out frequencies (so I don't have arguments with regulars if I succumb to a bout of forgetfulness, and because call letters are a function of when they were heard).

Baltimore - 1090
Wheeling - 1170
Cincinnati - 550, 700, 1360, 1530
Cleveland - 850, 1100, 1220
Buffalo - 1520
Rochester - 1180
Boston - 680, 1030, 1510

The one station that I heard here that I was the most pleased with was 820 in Fairbanks AK. I stopped sending QSL reports way back when, and vowed I would never send another one. When I heard Fairbanks blasting in on 820 (with local powerhouse KGO/810 on the air), I just had to send a report to them. Wouldn't you know it...the bastards didn't answer. DXing has always seemed rather pointless, but damn...it's interesting!

>that meet the AMax standards (such as GE Superadio) and stereo
>car radios have decent frequency response up to about 8 or 9 KHz.

I've posted about this station before, but since the topic has returned, I'll repost:
There is a station in Seymour Indiana-WZZB 1390 kHz (1kw daytimer) that you gotta hear to believe.
They have been awarded an AMax award for quality audio. The format is satellite AC, but on a good AM Stereo, they sound as good as most FM's, or even better. I have a Delco AM Stereo/FM Stereo in my Blazer and it has a norm/wide switch that expands the frequency response (the model with the mini 5 band graphic equalizer) and WZZB sounds incredible on it. Delco no longer produces this radio, but I scoured the junkyards, buying up a few extra so I could put one in my wife's car and I hold a couple of extras in reserve. The only problem is that they don't tune EB frequencies, and I have been told there are some impressive AM Stereo stations up there. I'm not saying that AM has a future playing music, but if done right, they can sound every bit as good as an FM.
If you have an AM Stereo in your vehicle and if you are ever driving down I 65 between Indinanapolis and Louisville, you gotta check out 1390!

From: The-Radio-Newsletter@yahoogroups.com

On Wednesday evening, 21st February 2001, Justin Hayward from The Moody Blues made an appearance on Mark Dezzani's 'Caroline South' Show on exclusively on Radio Caroline - in the first part of a two hour long interview During the first segment of the show, Mark spoke to Justin Hayward about how his musical career started and how he came to join the Moody Blues. He also spoke about how the Melletron instrument played a big part in the music of The Moody Blues and their success and influence on the music scene of the mid/late 1960's.

In the second part of the interview to be broadcast on Radio Caroline next Wednesday, 28th February between 7 and 8 pm GMT, Justin will talk to Mark about The Moody Blues into the 1970's and onwards, The Blue Jays album and about Justin's part in Jeff Wayne's legendary 'World Of The World's' album.

Also playing some of his favourite Moody Blues music and more along the way, the programme with Justin Hayward is an exciting insight into the career of the frontman of one of Britain's longest running bands.

Radio Caroline can currently be heard 7 days a week across the UK, Ireland and Europe on the Astra 1C Satellite, Transponder 35 - Audio Subcarriers 7.38 and 7.56 mhz stereo, around the World via the Internet at:

www.radio-caroline.nl
www.radiocaroline.co.uk
www.radiocaroline.de

and across North America via the Sat Com C3 Satellite.

Having driven a cab for exactly 1/2 day in Des Moines, I can vouch for
the fact that this could be an exciting format; at least it could be
in Des Moines. I suspect that greater Des Moines still has more different
street names than any other American city, as every every major street
there changes its name at least twice as it passes through the suburbs.

As someone who hadn't grown up there, it was too much for me to handle.

There were some AM stations with non-comm licenses as well, I believe, before the advent of FM, but you would have to ask the industry experts and historians on that.

From what I know, municipally-owned WNYC in New York is and always has been commercial free, but I don't know that for sure.. There are a lot of New Yorkers here, and I request that they confirm or contradict this, as the case may be.

Indeed - the National Broadcasting Company was a wing of Radio Corporation of America (RCA).

Two of the first four TV networks -- DuMont and NBC -- were also heavily involved in the manufacture of TV sets.

From 1953 until the mid-1960s, only NBC did any significant broadcasting of shows in color. Of course, the other two surviving networks were not involved in manufacture and sale of TV sets so there was little incentive for them to split from their traditional black-and-white base. Only when color TV became a fixture in many middle-class American homes (mid-60s) did ABC and CBS begin regular color programming. I understand that CBS had the capability from 1953 on (actually earlier with their own non-compatible system) but chose to only use it on rare occasions (some Red Skelton shows, the annual broadcast of 'Wizard of Oz', an occasional New Years' Day bowl game, a blockbuster musical special).

Doug Smith <w9wi@linux1.localdomain> wrote:

"My understanding is that there was no such thing as a non-commercial license before WW2. Stations could choose to operate without commercials, but they would hold the same type of license as those that did air spots. It wasn't until the FCC began reserving certain FM channels for non-commercial operations that there came to be a distinction."

The FCC started reserving channels for noncommercial educational stations when they opened the 41-44 MHz "apex" AM band in the late 1930s; 41-42 MHz was the NCE segment, and some stations were licensed there starting in January 1938, but no commercial apex stations were ever licensed (and only a few under experimental licenses) because the push toward FM became too strong. When commercial FM was authorized in 1940, 42-43 MHz was the NCE segment and the existing NCE apex stations were allowed to move up and convert to FM.

One other thing about apex is that, while a fair number of deluxe all-wave radios in that era tuned up into the full 41-44 MHz allocation, I've never heard of a radio that had a discrete 41-44 MHz AM band. Presumably some radios of that type, likely with wideband IFs, would have been introduced if apex had caught on (and FM had not).

Good one, Lance...no, it seems that EVERY post that mentions Bubba is
deleted by you...and he has been boasting on the air that he got the
boards shut down. As Neil Rogers would say, you have the balls of a
fruit fly...although I have a feeling the fruit fly's balls are
watermelons compared to yours. Ever hear of "Sullivan v NY Times"???

So who is telling the truth? You or Bubba?

Actually, in alt.fan.howard-stern, Bubba is mentioned...and as yet, he
hasn't got that NG shut down yet...

Let us know when you grow a pair, Lance...we won't be holding our breath...

A story broke here in Tampa Bay several weeks ago about the areas Major League Baseball team attempting to sign a prospect that had been arrested five times, and had pending charges of felony armed robbery against him. The Tampa Bay Devil Rays have among their many investors, Clear Channel Communications. Amazing, shortly after the story aired here, the charges against this young man mysteriously disappeared

There were posts made on the board regarding the CC All Sports station burying the storying, if not out right ignoring it in favor of other less pertinent out of town material.

WIthin hours of appearing those posts were removed by Radio Info, and several of us are trying to find out why they took such action. These posts were presented without any defamation of character or slander. Indeed, we could not post the name of one of the talk show hosts in question, because Radio Infos laughable Auto censor wouldnt let his name be posted. (No, his name (Steve Duemig) is not even remotely spelled like any word I think might face extra scrutiny)
...
Emails to Radio Info have gone unanswered.

If you prefer to answer publicly, now is the time to do so.

On the way to work today I saw a billboard that said something like:
"Rocket 107.5 - Houston's new rock alternative - KRQT"
107.5 is currently KLDE, which has been running an oldies format for
years and years (formerly 94.5 before a ownership change frequency swap
last year)
It could be the billboard is a joke - it's up in the Galleria area --
not too far from the KLDE studios -- visible driving North on the West
610 loop just past the Southwest Freeway.

Bonneville owns a CHR/Dance/Rythmic station in Washington, DC area,
and is simulcast in the far northwest suburbs to give it better
coverage.

They also own a classical and an all-news station in the DC market as
well.

It is in fact a FSK data carrier. Not programming of any type. It has also been determined that the FSK is in SSB mode! (a nice catch by an observant friend) It sounds like a regular AM carrier due to it riding in with another signal (the local station)
I did some research on the FCC site, and found that Florida Power & Light has a license on 1140 in the SSB mode, transmitter located in Florida City, Dade County. I've heard that power companies use this sort of stuff, but never encoutered it before. Data, control? Could it be??? I dunno for sure, but with that info, anybody in florida watching this thread? Let me know....

Thanks for the input folks!

Unlikely to be OTHR. It would take a humungous object to present any
radio cross section at 1140 KHz. By humungous, I mean an air craft
carrier would be a fly speck!

Riley...

If you think you will get an honest answer, I'll win on the next
three-legged horse at Tampa Downs...

What do Bubba & Duemig have in common? Both work for CC.

Before the Bucs/Eagles playoff game, Duemig blasted fans who live here and
support their hometown teams. His reasoning is that where ever you live,
it is that team you must support. He said that even tho he was born &
raised in Philly he "divested" himself of all loyalties. He particularly
singled out New Englanders who, years after they left that area still
follow the Red Sox, Patriots, Celtics, Bruins. He more or less said that
we had no right to live here, blah blah blah. As a Boston area native, I
got a little pissed off. I posted on the board. My post was deleted. And I
thought it was an error on my part that my post was deleted. Wasn't sure
if it was something I said or the fact that I mentioned that Neil Rogers,
who does his show on the flagship station of the Florida Panthers, is a
die-hard Maple Leafs fan and makes no bones about it. Neil will go to
Panther games wearing his Maple Leaf jacket and when the Leafs come to
town, will root for the Leafs to beat the Panthers. I alluded that if
Duemig worked on QAM, that he'd be lobbying to get Neil fired for

"heresy."

Evidently, opinions on the radio-info.com board now have to be approved by CC. I blasted Cox a few times and never saw those deleted...

Yes, I'm not the expert on this either but I would disagree - I'm pretty
sure those pre-FM AM stations, while operated non-commercially, held the
same type of license as every other AM broadcaster.

(even today, there are stations with commercial licenses that are operated
non-commercially, usually in a religious format. The FCC *allows*
commercial stations to sell advertising. It doesn't *force* them to.)

>> It is worth noting that the sale of commercials was NOT the financial
>> justification for the very first radio stations owned by for-profit firms.
>
>Two of the first four TV networks -- DuMont and NBC -- were also heavily involved in
>the manufacture of TV sets.

True, though by the time TV got going, advertising was the financial basis
for commercial radio. And paid advertising had been sold very early in the
life of commercial TV. I believe all the early TV broadcasters believed
they would eventually make a profit from the sale of airtime. (something I
don't believe is true of the first radio broadcasters)

Of course, if they could make some money selling TV sets in the interim, so
much the better...

>
>So who is telling the truth? You or Bubba?
>
>Actually, in alt.fan.howard-stern, Bubba is mentioned...and as yet, he
>hasn't got that NG shut down yet...

Comparing a NG to a private forum like radio-info.com is like
comparing apples and oranges. Radio-info.com exists on one (or maybe a
few servers) and it only takes one or two people to decide to shut it
down. A Usenet NG exists on thousands of servers all over the world.
It would be a near impossibility to shut down a newsgroup. I still
find NGs about Hurricane Andrew and the Atlanta Olympics when I start

nosing around randomly. I'd like to see someone try and shut down alt.fan.howard-stern. It should be amusing.

Also, since Lance and his co-owner are paying for the server, it seems that they have the right to do whatever they want with it. If you guys are making a nuisance out of yourselves, it's not surprising that they got rid of the headache at the source.

George

Actually, WHA *couldn't* close down during WWI as it didn't exist yet!

(it was still 9XM, an experimental station. I want to say it got a
broadcasting license in 1922. At the time, it was legal for experimental
and amateur stations to broadcast though.)

No, this one was 100% canned. Seems to me I read somewhere about Rhino
Records releasing a CD with covers of this song, my guess is they put it on
shuffle & let it run for a few days..

Caroline singing The Blues

On Wednesday evening, 21st February 2001, Justin Hayward from The Moody Blues made an appearance on Mark Dezzani's 'Caroline South' Show on exclusively on Radio Caroline - in the first part of a two hour long interview
During the first segment of the show, Mark spoke to Justin Hayward about how his musical career started and how he came to join the Moody Blues. He also spoke about how the Melletron instrument played a big part in the music of The Moody Blues and their success and influence on the music scene of the mid/late 1960's.

In the second part of the interview to be broadcast on Radio Caroline next Wednesday, 28th February between 7 and 8 pm GMT, Justin will talk to Mark about The Moody Blues into the 1970's and onwards, The Blue Jays album and about Justin's part in Jeff Wayne's legendary 'World Of The World's' album. Also playing some of his favourite Moody Blues music and more along the way, the programme with Justin Hayward is an exciting insight into the career of the frontman of one of Britain's longest running bands.

Radio Caroline can currently be heard 7 days a week across the UK, Ireland and Europe on the Astra 1C Satellite, Transponder 35 - Audio Subcarriers 7.38 and 7.56 mhz stereo, around the World via the Internet at:

www.radio-caroline.nl

www.radiocaroline.co.uk

www.radiocaroline.de

and across North America via the Sat Com C3 Satellite.

There is a small band of DX listeners, who use communications receivers and directional antennae to pull in such catches.

In the 60's when living in Ohio, I had nearly 10 different confirmed receptions from Hawaii, including one 250 watt station. I heard over 80 California stations, etc.

The listening is not for enjoyment; it is for the challenge of hearing far off signals.

Having followed this thread, I would agree that WHA in Madison, WI is
the oldest
currently operating.

According to the Michigan Broadcast Guide web site history section
It's an interesting site at:
http://www.michiguide.com/
WKAR-AM in East Lansing, MI was licensed on 1/18/22 to the Michigan
Agricultural
College (now Michigan State University) after experimental operations
dating back
to 1917.

In Springfield, MA just can't get it's act together on weekends. Technical difficulties are the norm, but this morning was the clincher all because the talent couldn't hear programming in his headsets. It became a fiasco of "Hello, test...can anybody hear me....Charlie you are on air .....let's go to the news....(dead air).....Hey Charlie go to the other studio. On and on for about 10 minutes all on the air. At first, I found it amusing. But, as time went on I was totally embarrassed for them. I was in broadcasting for 30 years. I have never heard unprofessionalism to that extent for such a long period of time. Is this what mega mergers are all about?

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Most likely in a metal box somewhere along the highway like all these low powered AM "traffic information" radio transmitters that operate around 1610 or 1620. Someone can call it by phone to update the repeating loop message.

> wasn't around. But I heard it was quirky)

In the 1950s up until the mid-1960s, it was reserved for simulcasts of the AM side of the AM-FM combo. There was also a lot of classical music, jazz, and some "beautiful music" (the format was "beautiful music", most lay people called it "dentist music").

In the mid-to-late 60s a lot of experimentation began. I was prompted to answer because one station in Boston, WRKO-FM, played an all-automated "robotic" top-40 format. Even the robot had a name = R-KO or ahr-ko, and an electronic voice. "this is ahr-kho your shy but friendly robot in boston" (choral jingle - 98.5 - WRKO-FM, more music!) "only r-ko plays twelve in a row" etc, and they would go into what is today called a music sweep.

Another experimental format that became known as "progressive rock" was adopted by WBCN-FM - formerly a classical station and former part of The Concert Network. Basically, the station played a lot of eclectic music - no bound music format, except they shied away from top 40. A lot of album cuts, some unknown artists, even some folk, and they might even throw a classical cut in there from time to time. And the announcers seemingly tried to sound like they were always high - a lot of "uh, umm, like, uh, waow, I have to tell you about this restaurant now" ads.

Some of the experiments worked - like WBCN-FM. Some, like the WRKO-FM format, didn't. It was a lot of fun to spin the dial and listen to things - they changed from day-to-day, and there was no such thing as a packaged format. There were also a lot of 5 and 10 watt low power non-comm stations. Some of them were only high school and college kids just horsing around. Others had student broadcasters with truly experimental and exciting styles and ideas.

I'm curious - how can FSK be SSB - or even AM?

Or do you mean an audio frequency FSK signal is being modulated on an
1140 KHz carrier, ala the old VF TTY system used by Telco's? Though if
it is audio FSK on SSB (suppressed carrier), that would be no different
than plain FSK.

Power companies do use carrier current transmission on their power lines
for SCADA purposes, though I wasn't aware that this extended into the MW
band. They have been one of the opponents of establishing an Amateur LF
allocation. They fear that it might interfere with their unlicensed operation.

Gray

It is possible that this was a (real) low power AM owned by the mall.
Designed to cover not more than a few blocks surrounding the mall. Airports
and malls do that. Their "facility" would be presumably at the mall.
The AM band used to end right there. They could be trying to utilize the
new expanded band, or the "joke" might be that most radios are not able to
go up to the expanded band yet, and thus you might not be able to get 1610
depending on your particular radio...
Or a pirate station...

If they are an actual station, the FCC requires them to do a legal ID at
(near) the Top of EACH Hour. That will give you actual call letters and
city of license. If they are something else, what you actually hear could
be anybody's guess.

I understand DX, as I'm a ham radio operator & have DXed the AM band.

> In the 60's when living in Ohio, I had nearly 10 different confirmed
> receptions from Hawaii, including one 250 watt station. I heard over 80

I can understand that also. The frequencies were alot less crowded in the
60s.
I still can't understand how you can receive 850 Cleveland in Calif. under
KOA & get 550 & 1360 Cincinnati since those frequencies are loaded!

Maybe you haven't, but I have.
It happened at one station that used to be on the air in the Dallas area. It was independently owned and didn't have a lot of money. However, they attempted to do live remotes. The Ops manager would have the board operator open the remote over other programming to set the feedback suppressor. So, if you were listening to the talk show on the air at the time, you'd hear the remote location.. people talking.. a squeal or two.. etc.. until the ops manager could get the settings right.

> ...I just called WHA's University Avenue offices; the Listener Services rep
> I spoke to confirms that WHA *did not* close down during the War, and in
> fact was used for both Naval and civilian purposes...

There is actually no evidence that any Univ. of Wisconsin
station--or anyone else's for that matter--operated any
sort of civilian radio service during World War One. The
reason is simple--at the time the U.S. Government took over
all the radio stations on April 7, 1917, it also made it illegal
for civilians to listen to radio transmissions. In fact, until
the listening ban ended on April 15, 1919, it was illegal
for a civilian to even possess an operational radio receiver--at
the start of the war, they were required to disable any receivers
they owned.

It also gets confusing whether we are really talking about just one
station or not. 9XM was first licenced as an experimental station
around July, 1915, then was shut down with everyone else on April
7, 1917. After the war, 9XM first reappears on the station lists
in the May, 1920 Radio Service Bulletin.

The information on the Navy wartime station that operated at the
Univ. of Wisconsin is sketchy, but the station is listed as 3WX
in the July, 1920 Consolidated Radio Call Book, and as WX3 in a
list of "War Department Training and Rehabilitation Schools" that
appears in the December 1, 1919 Radio Service Bulletin.

WHA didn't exist until January 13, 1922, when it was licenced as
a broadcasting station under the regulations that had been adopted
Dec. 1, 1921, which formally set up a broadcast service. (Note
that 9XM continued to operate as an experimental station even after
WHA was licenced as a broadcasting station, which brings up the
question of whether 9XM and WHA can be considered to be "the same
station").

In the Winter of 1977, The Journal of Broadcasting published
Joseph E. Baudino and John M. Kittross' "Broadcasting's Oldest
Station's: An Examination of Four Claimants". WHA and its
predecessors was one of the stations they reviewed, and they found

no evidence of a civilian service during World War One. In fact, they couldn't even find evidence that 9XM ever had a regular broadcast service before the war, and reported that 9XM's earliest broadcasts (of weather reports) apparently didn't start until January, 1921.

They used to be clearly audible anytime except summer from about
11pm-4am, mostly on Saturday PM/Sunday AM and Sunday PM/Monday AM.
I used to stay up all night listening for them. Still remember being
very pissed when WOKJ/1550/Jackson MS signed on in the morning. Tried
several times to dig one station out of the mud on 1550, and finally
found out it was a 250 watt station in Corydon IN. It was possible
(though not terribly easy) to dig out 1KW and 5KW stations from all
over the eastern part of the country, though New England and Florida
were always the most difficult.

There are two Rhino CDs that I know of _Best of Louie Louie_ (1983) and
Best of Louie Louie vol 2 (1989)

The liner notes of the first include

``In addition, even the media began to give ``Louie'' its just due. In 1980,
two LA DJs, Art Damage and Chuck Steak, began holding weekly ``Battle of the
Louie, Louie'' contests on their KPFK radio show. The jocks would play a
couple of versions of the song and listeners would call in and vote for their
favorite rendition. The following year Stretch Riedle, Music Director of
KFJC-FM in Los Altos Hills, CA, decided to assemble all the versions he
could find of his all-time favorite rock song as a special feature on his
regular air shift. Riedle was able to obtain 33 versions of ``Louie, Louie,''
which he played consecutively for slightly over an hour and a half. Response
to this special was surprisingly good, and Riedle obtained several additional
versions from listeners during the program.

``By coincidence, KALX-FM in Berkeley had just completed a listener survey to
determine their audience's all-time favorite rock song. When ``Louie, Louie''
topped the poll, KALX expanded Riedle's concept and increased the number
of consecutively aired ``Louie'' versions to 50 in December, 1981. Five months
later, KFJC broadcast its second ``Lou-a-thon'' with an additional 38 versions,
pushing the total up to 88 distinctly different renditions of the song.
Finally, in December, 1982, KALX's Amazing Mystery DJ made a Herculean effort,
and assembled a 200-version, 12-hour tribute to Richard Berry's rock icon.

``The next step was KFJC's ``Maximum Louie, Louie,'' which aired on August 19,
1983. Over 300 versions were catalogued on a computer playlist for the special.
In addition, local bands performed live versions of the song on the air. To
add a final touch of authenticity, Richard Berry hosted a portion of the special
and even performed a live version of the song.''

The first CD is sometimes at http://www.spun.com/music/product-detail.jsp?id=844963
or http://gemm.com/

The second CD is still in print.

I'm very sad to inform all of you of the death of veteran Vancouver broadcaster Rick Honey.

Rick lost a valiant battle with cancer on Saturday afternoon. We who had the pleasure of working with him on the morning show at the "Unforgettable 600am" will miss him a great deal.

Rick spent most of his career at CKNW in Vancouver, but had worked at CKLG prior to that, and at STARfm before coming to CKBD 600am. He was on the air right up until two days before his death.

Rick Honey was 53 years old... way too young to go. If you wish to leave an e-mail condolence, go to: http://www.600am.com

Thanks

Campbell McCubbin
News Director
600am/JRfm
Vancouver, BC.

He must mean that it's on only one side of 1140, which would turn up on a
modern receiver as either LSB or USB only; and they report the switch reading.

If it were on both sides, that would be the interesting fact, in fact.

There is an official morse mode using an audio tone on AM, probably called A2
or something. I don't know that there's a FSK version.

David,

Partially true. There was (and is) a challenge involved, but I always liked to hear the stations as well. They had local personality then, which isn't usually true now. When I found one I liked, I would sometimes have to tear myself away from it to get back to DX. I was particularly fond of CKLW/Windsor and KOMA/Oklahoma City.

As far as technology, I now use either a Radio Shack DX-394 with a Palomar loop or a R-388 (if I want to keep the room warm). The DX-394 is OK, but the R-388 is great.....really good for TransPacific DX. My best catches were on my two favorites...a 1938 Philco console and a 1936 RCA console. My antenna was a metal window frame. Still have both of them, and they still work well.

Hey CORPORATE PIGS!!! WAKE UP!! Yes, this statement is TRUTH and we undoubtedly WILL pay hell because of the satellite mentality. I personally would like to see a class-action suit against the FCC for allowing the corporations to operate public radio stations in a manner that FAILS to serve the public!! If a tornado were to hit my city, it's really iffy as to whether there would even be an EAS alert on radio. TV, maybe, but I doubt the idiots that own these radio stations around here even have their EAS equipment working properly. They can't figure out you need to put limiters before the STL's and they can't seem to grasp that 100% is the most you can legally modulate on FM!!

Fucking greedy morons, the whole lot of them! I hope they all go belly up!!

Well, you should come to Michigan some time. What isn't corporate is either barter or Christian radio, and are doing so well they will be pulling the plug before long... just waiting for the next Clear Channel to come scoop up dark stations! We've got NO good stations left in the Detroit/Flint/Lansing/Tri-Cities markets... all the same corporate crap!

Welcome to radio in the new century!! When these corporations won't spend money for people with talent and skills, that's what you get, and that;s what we've got, all over the USA! I worked in radio for 20 years and would still love to work in radio but the corporations have made talent, skills and experience something to stick their noses up at. It's because we need "X" amount of dollars to live and the kid with 2 months experience will work for $6 an hour. So, he gets the job over the experienced person.

It sucks!!

Deregulation has caused more harm than good to the radio industry and I believe it will crumble under the pressure from other formats (CD, MP3, etc). I find I listen to shortwave radio more than I ever listen to AM or FM (unless I'm DXing!).

I have my own little 50mW FM stereo Part 15 transmitter with a great deejay program (has EQ, AGC and limiting included) that runs 24/7. My neighbors here in the apartment complex love it because I play thousands of songs and no commercials.

Radio in this market (Detroit/Flint) is totally stale.. it's the same old stagnated crap. Even the college stations suck! The corporations have ruined it so bad that no one really listens to much of it at all anymore. Sad, really sad.

1091. Dallas' AM 1190

I was in Dallas last week and had the opportunity to visit the KJOI transmitter site.
Thanks to Wally Wawro, Chris Boone & other who provided info and directions.
I didn't get eaten by rattlesnakes and I must say it was impressive. I've shown the video to a few CE's who were equally impressed.
A year or so ago, we had a thread here about directional antennas and I can't remember the outcome.
My question to Peter and others who were involved in that thread, is KJOI the most directional station in North America?
And... now that WOWO is a Class B, and has no secondary protection, couldn't KJOI get authorization to relax the pattern to the NE?
It seems to me KEX is the only dominant station on 1190 with secondary coverage protection.

Amen brother! From what I've heard of IBOC tests (not a lot but a couple
demos) it realy sounds like an MP3 stream at 22kHz. It still has a somewhat
"swishy" sound to it and I personally think that C-QUAM blows the doors off
of IBOC, based on the demos I've heard. One was on a CD that someone gave
me.

I wish more manufacturers would back C-QUAM...

WRMR is now running 50kwDays/10KW Nights as Scrutinizer said, it is all in the equipment..in the 70's i heard KFI 640 Los Angeles very faintly in East Canton, Ohio on a fairly normal reciver (WHLO 640 Akron was off the air then or I wouldnt have heard it at all.) Also have heard KOA 850 Denver over WJW 850 Cleveland which is about 50 miles away..(The same station that is now WRMR)

Last spring, I tuned to WHYN for a Red Sox exhibition game. The satellite-delivered talk show ended at 12:55, then there was a station ID and about a minute of dead air. Then, a repeating loop from flagship WEEI: "This is WEEI Boston. Today's game has been rained out. It will not be rescheduled." And so on, including a phone number for affiliates to call for info on possible make-up broadcasts. This went on through the top of the hour (no ID, except for WEEI <g>) until about 1:05, when somebody there finally awoke and switched to another bird-feed talker. Ugh.

It's the assholes that run the corporations (CEO's) that have ruined radio. Them and their consultants. They've taken all the talent, creativity and flexibilty out of radio and have made it nothing but stagnant dribble. The FCC and NAB have spoon-fed all these fat pigs by letting them own entire markets. All their stations sound the same, probably because they all use the same satellite feed. Even the live stations suck because they refuse to hire people with good radio skills and talent, opting for younger, inexperienced "jocks" who will work for $6 an hour. Those of us who devoted a large part of our lives, I.E., 20 years, to radio and love radio get shitcanned because our knowledgs of radio intimidates these idiots who would be lost trying to turn the microphone on and because we actually need a decent paycheck to survive. It's okay for THEM to make $100k a year for being morons but it's not okay for us to make over $25k a year. We're expendable (as is anyone in radio) and are often expended. If you like to relocate once a year, radio's great. Otherwise, it's fucked!

Why is it that every on air flub is now blamed on the parent company?
Isn't it possible that WHYN's problem was local? Do you really believe
that CC Headquarters is to blame?

Whatever complaint you may have with them, my experience has been that
CC is a technically savvy company starting with Randy Michaels. If you
have a philosophical problem with deregulation and consolidation,
state it, but don't grasp at straws like this searching for every
little mistake to blame on those big, bad companies.

There are about 12,000 radio stations in the US, Clear Channel owns a
little more than 1,000 of them. Let's be conservative and say they
don't own at least 10,000. Arguments that a few companies own all the
stations simply isn't true.

We are lucky in the Albany NY market to have a college station (WRPI) which is open to the community (I am involved). It is a 10kW station with about a 70 mile usable signal radius. We are a Pacifica affiliate as well (that may change soon, depending on politics). About 1/2 the programming is public affairs programming, much of it locally produced.

>to syndicate the program.

There's got to be a different reason, because the Indiana University
library used to have (and may still have) a promotional booklet on Sam
'N' Henry that specifically mentions how their show was syndicated on
records, and uses the term "chainless chain". Also includes sample
script segments [of a courtroom scene], pictures, and other whatnot.

I haven't been back to Bloomington for over ten years, so I don't know
if the IU library still has it. The one time I stumbled over it, I was
very surprised to find Sam 'N' Henry on records, as I thought that
didn't happen until WMAQ.

1107. Who's the FM pirate on 95.7 in Jacksonville?

Newsgroup: rec.radio.broadcasting
Date: 2001-02-28 06:31:21 UTC
From: mnmaniac@aol.com
Message-ID: <t9p6ppioch79dc@corp.supernews.com>
Source record: 15386

Was up in Jax on business for a few days last week. Heard what I presume to be a pirate on 95.7. (Since there are local Class Cs on 95.1 and 96.1, it's a pretty good guess this is NOT a licensed station.)

Format was Reggae, broadcast in mono. Signal was relatively strong for a pirate, especially in the NW portion of the metro.

Anyone know who is behind this?

Found out on Alt.Radio.Broadcasting that this was apparently an old
billboard that was never "cleaned". It was apparently hiding behind
another ad that had fallen off the billboard.
I had forgotten that for a few months (weeks?) between 107.5's
Classic rock (Z-107) format and "The Buzz" Format in 1994, the station
was known as Rocket 107.5.
So sorry, you still get the same oldies back to back to back and
then repeated! It's back to CD's for me!

Source record: 15388

After reading today's digest filled with Mr. Neutron's blast about contemporary radio, I couldn't sit here and let Rich be the only one to contest his statements.
My first radio job was in 1972 and I consider myself fortunate to be in this business 29 years later.

>whether there would even be an EAS alert on radio. TV, maybe, but I doubt
>the idiots that own these radio stations around here even have their EAS
>equipment working properly. They can't figure out you need to put limiters
>before the STL's and they can't seem to grasp that 100% is the most you can
>legally modulate on FM!!

There may be an element of truth to this, but I would imagine that if a station does not have EAS equipment working properly, I doubt if it would be a Clear Channel property. My experiences have shown that smaller, mom & pop stations are much more likely to have EAS problems or to be operating outside of their parameters.

>Anybody working in radio ANYWHERE should always consider getting out before
>the dish network idiots come calling! There is NO job security in radio.

When has there EVER been job security in radio? I have been at my current station for 10 years. I know air talent in this area that have been at the same station for 10-15 years with no sign of ending. 25 years ago I would be hard pressed to name one personality who had been at the same station for 5 years.
There has NEVER been any job security for air talent in radio.

>More like, Clear Channel/Cumulus/Citadel/Jacor came in, GOOD radio went
>obsolete!!
>Hey corporations!! YOU'RE KILLING RADIO!! But you'll see that when all your
>listeners just stop listening... I DID!!

Overall.. radio listenership is higher now than it has ever been. Despite incredible competition from CD players & MP3 players, people still love radio.
Cookie cutter radio exists and flourishes today because that's what people want. The reason a station in Des Moines sounds the same as a station in Hackensack is because people in Iowa don't differ much from people in New Jersey in what they want when they turn the radio on.
It's ironic that the true superjocks (sorry Lar') like Howard, Bob & Tom, John-Boy & Billy, Mark & Brian etc. are those despised Satellite jocks that you say are killing radio.

>plug before long... just waiting for the next Clear Channel to come scoop
up

>dark stations! We've got NO good stations left in the
>Detroit/Flint/Lansing/Tri-Cities markets... all the same corporate crap!

Last time I was in Detroit, I heard several great radio stations. It's easy to say that all radio sucks or there are no good stations any more just because you can't find one that fits your taste.

>still love to work in radio but the corporations have made talent, skills
>and experience something to stick their noses up at. It's because we need
>"X" amount of dollars to live and the kid with 2 months experience will
work
>for $6 an hour. So, he gets the job over the experienced person.

I doubt if the "kid" is making $6.00 an hour. My guess is that he is there because he didn't complain when they installed a digital delivery system, and he embraced the new technology. My guess is that he probably has a favorable attitude about his job and doesn't sit around complaining all the time.
But the real thing here is, air talent has never been an avenue to wealth. It has always been the case that, with rare exceptions, the owners and sales staff made the big bucks. Why in the world did you get into this business if money was so important? Most of the people I went to school with are building their IRA's and investment portfolios, preparing for retirement. After 29 years, I still live pretty much paycheck to paycheck, but I have no regrets.

> Radio in this market (Detroit/Flint) is totally stale.. it's the same old
>stagnated crap. Even the college stations suck! The corporations have
ruined
>it so bad that no one really listens to much of it at all anymore. Sad,
>really sad.

I would love to hear your explanation about how deregulation, consolidation and corporate America have screwed up all of the non-coms and college stations.

>decent paycheck to survive. It's okay for THEM to make $100k a year for
>being morons but it's not okay for us to make over $25k a year. We're
>expendable (as is anyone in radio) and are often expended. If you like to
>relocate once a year, radio's great.

Again, how you blame corporations for this? With just 2 modifications, this statement could have been written in 1975:

>>It's okay for THEM to make $50k a year for
>>being morons but it's not okay for us to make over $12.5k a year. We're
>>expendable (as is anyone in radio) and are often expended. If you like to
>>relocate once a year, radio's great.

Again I ask, why did you get into this business in the first place?
Job security and money were never the strong points of a career in radio.

KRQT (Rocket 107.5) was the short-lived predecessor to KTBZ on 107.5...it had a rather hard-edged alternative format...was launched on Halloween day, 1994, If I recall correctly...it replaced classic rock KZFX, which had been on 107.5 since 1986 (it was comtemporary Christian KGOL before that.) The following spring, management did another overhaul, tweaked the music, and relaunched it at KTBZ "The Buzz." Of course, KTBZ is now on 94.5, having swapped frequencies with KLDE in the big Clear Channel/AMFM spinoff derby. So what you are seeing is an old billboard.

>CORPORATIONS--- FUCK YOU!!!!

If radio programming is what determines whether you choose to live or
die you have a much more serious problem than corporate radio.

A cursory study of History will tell you that most of mankind's
existence has been without any kind of media, including print. They
found reasons to live. They did pretty well making lives for
themselves while admiring the dinosaurs exploring the neighborhood.

If radio was the only thing that made my life worth living, I'd
voluntarily meet my maker.

I hope it is a joke. I haven't seen the billboard in question, but KLDE is the
only oldies station in town currently. It wouldn't surprise me, though, if the
corporate owners decided to change the format.

Not that we need another alternative outlet; we already have those in the form
of The Buzz and that other one at 96.5 (can't remember the station).

What we really need here is a station that plays ONLY classic country music.

Paul.

What!!! You have an automated station, just like the big corporations
you bitch and moan about???? Where are the live jocks? I thought live
radio was the only way to go.

Damn! Even the pirates have gone the automated route. There's no live
radio. How many potential great talents are you cheating out of great
jobs because your automated station?

And your automated juke box is far superior to all the others. In
other words, you play the music that pleases you and that makes it
good.

It's really almost a necessity to use a Drake, JRD R71 or equivalent receiver to AM DX these days... and the good ones are in the $500 and up range. Explaining again why there are so few AM dxers left.

When I was a teen, I used to call XEB in Mexico from Ohio to request songs, but generally got back to the DX after a while!

Thanks for the note, Cam. I found out about it from one of our
early morning newscasts ('NW picked it up a few hours later).
I gather someone called the newsroom. And likely one of the kids
we have working said "Who?" :(

Incidentally, I'm glad to see some thinking by someone at
your station to have Dave McCormick record a tribute. I don't
know how much of your weekend programming is on DCS (or weekend
dead air as was the case at 7pm Sunday :) but I was cringing
that some computerised promo or "ad-lib" for his show would pop
up on Sunday. I didn't hear a one. Nothing like the dangers of
computerised radio.

OH!! That hit it right on the head!! Every other jock out there model themselves after this pathetic jerk! There was one CHR jock in this market a while back who HAD to believe he *was* Stern in his own mind! He talked, looked and acted just like that arrogant bastard. Went down in a sex scandal IIRC.

If only there were more "role models" in radio, along the lines of Dan Ingram, it might be worth turning on again! But, NO!! We have to listen to someone with the attitude and mannerisms of Eminmem, pretending they're GREAT while pumping out the same corporate drivel.

1121. Test patterns.

Newsgroup: rec.radio.broadcasting

There are some tv stations, they go off the air,and they just leave up the coloured bars test pattern, and/or put the station's logo on the screen, while they are off the air. Why don't they just turn off the transmitter (snow) while they're off? That might save them some money,too.(Also, an interesting side note... they don't go off the air anymore, but KPHO TV 5 used to go off the air Monday from 2-3.30 am, and they didn't show snow, they didn't show the coloured bars, they didn't show the station's logo; they showed a test pattern... saying "Can't sleep? Call (some 1-800 number) for a free sample" (of an insomnia medicine,with a picture of said medicine below the above text.) Different, huh?

There's your problem... Clear Channel... the big corps have no regard whatsoever for regulations and do what they want to and get away with it! If a local O&O tried that, the feds would be barking up their tree by the end of the day. But the big corps get away with blatently blowing off regs, such as:

Twisting call letter/slogans (like this example)
Leaving AM's on day patterns/power
Leaving AM daytimers on all night
Overmodulation
Excessive distortion
Falsifying transmitter logs
"Tweaking" AM DA's out of spec to reach markets better
Transmitters over legal power
Lighting only one tower in DA's

I've seen all of this commonly in the Detroit/Flint market and the FCC just looks the other way. One local group has no limiters on their aural STL's (on FM!) and they are forever pumping splatter all over the spectrum. I measured over 2 MHz splatter on one STL in the market. This is just plain "bad" radio. Not to mention it sounds awful!! They've got the best plant and equipment in the market but sound just God-awful. As if that wasn't bad enough, they have their Optimod 9000 maxed and are modulating at 110% continuously.

Another one has had one tower lit out of three for the longest time (the FAA finally popped them for non-compliance) and I've seen a couple other arrays around doing the same thing.

These big corporations have indeed ruined radio, in terms of programming as well as technically. As much as I love radio, I just can't listen to it anymore. Seeing how radio is today just makes my blood boil!

Hey CORPORATE PIGS!!! WAKE UP!! Yes, this statement is TRUTH and we undoubtedly WILL pay hell because of the satellite mentality. I personally would like to see a class-action suit against the FCC for allowing the corporations to operate public radio stations in a manner that FAILS to serve the public!! If a tornado were to hit my city, it's really iffy as to whether there would even be an EAS alert on radio. TV, maybe, but I doubt the idiots that own these radio stations around here even have their EAS equipment working properly. They can't figure out you need to put limiters before the STL's and they can't seem to grasp that 100% is the most you can legally modulate on FM!!

Fucking greedy morons, the whole lot of them! I hope they all go belly up!!

It's the consultant's job to ensure that the airstaff is unhappy. It's in
their job description!

Opening: Radio Consultant
MAJJOR RADIO GROUP INC. has an immediate opening for a RADIO CONSULTANT. Pay
starts at $150k/year with typical profit sharing checks of $50,000 and a
$20,000 Christmas bonus! Full benefits including furnished condo, company
car, hot tub, tons of free CD's, 52"TV, free weekly Prime Rib dinner, $500k
line of credit, free sluts and expense account. You will consult the
following stations in our group: WSUK-AM/FM, WSUX-AM/FM, WBUT AM/FM,
WDIC-AM, WBLO-AM/FM, KRAK-FM, KSUK-AM/FM, KTIT/KASS-FM, KUNT-AM/KLIT-FM,
and KOCK-AM. Our ideal consultant must:

~have quit high school in the 10th grade
~have absolutely NO computer experience
~be obese and exhibit body odor/bad hygiene
~have an IQ in the single digits
~have been fired from a radio position for mediocrity
~hate music and radio
~believe that listeners are stupid
~believe that radio people are even stupider
~be able to "steal" another station's airsound
~have no technical inclination whatsoever
~failed work experience at 7-11 or Burger King helpful

Job Duties of Corporate Radio Consultant

~create stagnated music playlists
~pull as many good songs from library as possible
~ensure no more than 300 songs are in playlist
~ensure that most songs repeat every 90 minutes
~add "new" songs as they become recurrents
~change clocks and formatics twice a month
~create lame station slogans and themes
~type up lame liner cards
~make stations sound as lame as every other one
~call employees daily during airshifts and bitch at them
~stifle individual creativity whenever possible
~convert enthusiastic talent into disgruntled employees
~pressure veteran airstaff to leave the station
~change format and terminate the airstaff every 12 weeks

If you qualify and feel you can excel at these tasks, MAJJOR RADIO CORPORATION would like to set up an interview with you!! Call us today and ask to speak with our Human Resources director, Mr. Droid. He can be reached 24 hours a day at 1 - 800 - 4 - THE - JOB! Call NOW!!!

Greg and Joan <ggjn@sprynet.com> wrote:

"From 1953 until the mid-1960s, only NBC did any significant broadcasting of shows in color. Of course, the other two surviving networks were not involved in manufacture and sale of TV sets so there was little incentive for them to split from their traditional black-and-white base."

Actually CBS sold TV sets for a few years in the 1950s; they bought out Air King (and its tube-making affiliate Hytron) in 1951, and stopped making TVs in 1956 when the TV business went into a downturn.

"Only when color TV became a fixture in many middle-class American homes (mid-60s) did ABC and CBS begin regular color programming."

ABC started colorcasting in fall 1962, but on a very modest scale with only filmed programming -- namely, The Jetsons and The Flintstones, which were already being photographed in color. (The Flintstones had already been filmed in color for two seasons during which ABC only aired it in B&W; ABC also refused to show American Bandstand in color when WFIL offered it that way in the late 1950s, and some episodes of Disneyland/Walt Disney Presents were shot in color at Disney's expense but only seen in B&W on ABC.)

"I understand that CBS had the capability from 1953 on (actually earlier with their own non-compatible system) but chose to only use it on rare occasions (some Red Skelton shows, the annual broadcast of 'Wizard of Oz', an occasional New Years' Day bowl game, a blockbuster musical special)."

CBS did have a few color series between 1955-58, but from 1958-1964 they had a strict practice of only using color when requested and paid for by a sponsor (such as Ford). They started a trickle of color programming in 1964/65, expanded it quite a bit in 1965/66 and had an all-color prime time schedule in 1966/67, as did ABC. (It actually took until fall 1965 for NBC to get its entire prime-time schedule in color.)

Source record: 15380

>>
My question to Peter and others who were involved in that thread, is KJOI the most directional station in North America?
>>

Yes.

The field ratio is about 3.88, which gives a power ratio of about 15.08, IOW, KJOI's 5 kW input gives the equivalent of about 75 kW within that narrow aperture which is directed towards Dallas primarily, and Ft. Worth secondarily.

There is no other DA I am aware of which is that directive.

>>
And ... now that WOWO is a Class B, and has no secondary protection, couldn't KJOI get authorization to relax the pattern to the NE?
>>

Possibly, but:

1) 1190 in Kansas City beat everybody to the punch with an application for dramatically increased night power (license of 0.25 kW; application of over 4 kW), and

2) Salem paid WOWO to change its pattern to provide a near total null towards Atlanta, thereby facilitating Salem's Atlanta station adding night service on 1190.

This change also allows WOWO to increase power to above the "grandfathered" Class A minumum of 10 kW (WOWO was reduced to 9.6 kW by ICB, thereby immediately causing a reduction in class from Class A to Class B), but I'm afraid WOWO has already been dropped from the Class A list.

>>
It seems to me KEX is the only dominant station on 1190 with secondary coverage protection.
>>

Nope.

There were three Class As on 1190, and now there are two: KEX and XEWK.

KEX has recently changed its night pattern to increase its field towards WOWO and towards other stations to the east of Portland.

XEWK in Guadalajara, Jalisco, Mexico was a "grandfathered" Class A with 10 kW ND all hours.

But XEWK has apparanetly added day operation at 50 kW, and also is "notified" at 50 kW ND all hours.

Whether or not night operation at 50 kW is actually in service is unknown to me, but I doubt it as KEX comes in clearly and XEWK cannot be heard under KEX.

BTW, XEWK's single stick is "notified" with a minimum "conforming" efficiency of 362.10 mV/m/kW at 1 km (which usually requires at least a 165 degree stick and a very good ground), but XEWK is also "nitified" with a 130 degree stick, so XEWK's efficiency is truly bogus.

I believe the only other ND Class A with a short stick and a purported minimum "conforming" efficiency is KNBR with 362.10 mV/m/kW at 1 km from its 135 degree stick. Probably a bogus efficiency as well.

>can't remember the outcome.
>My question to Peter and others who were involved in that thread, is KJOI
>the most directional station in North America?

If it isn't, it's pretty close. It sends one big finger of signal over Dallas. It's not aimed at North Dallas where all the money is now. It's aimed more or less towards Oak Cliff where all the money used to be. It's heavily interferred with in Fort Worth at night and is almost impossible to get west of Fort Worth or much east of Dallas.

>And... now that WOWO is a Class B, and has no secondary protection, couldn't
>KJOI get authorization to relax the pattern to the NE?
>It seems to me KEX is the only dominant station on 1190 with secondary
>coverage protection.

Theoretically, yes. However, it's my understanding that WOWO is not the primary problem for KJOI. As I recall, the Dallas 1190 has a much stronger restriction based on KEX and some station in Mississippi. Besides, the transmitter site is 25 miles to the northeast of Dallas. All you would do by extending a lobe toward Indiana is increase your coverage in a non-metro area.

If CC wants to fix that station's nighttime coverage, they're going to have to figure out a way to consolidate both the daytime and night time sites. Maintaining the 12 tower night time and 4 tower daytime sites that are 35 miles apart is difficult.

The daytime site is a problem because it's in the flood plane of the Trinity River and it's right across the road from the Dallas garbage dump. As of 4 years ago, the STL dish on the tower there was barely above the line of site of the top of the garbage heap. If a truck was on top of the heap, it blocked out the signal sometimes.

I'm just glad someone has finally done something decent with the poor old 1190 frequency. Even if it is the satellite delivered Fox Sports format - It's a pretty good product.

Arnold

Source record: 15302

Once again, John, if you could wave the appropriate chickens to get this passed to the Airwaves mailing list, you will earn my undying gratitude. Thanks.

As I suspected, I hit posting filters at Supernews.

Someone who posted (or attempted to post) was in their filters because they had apparently spammed some other newsgroups. The post from that person tripped the filter, and then I got shut down completely because there were a bunch of posts coming from the same place, literally within seconds of the post that got filtered. (I dump posts out to the newsgroup in bulk, averaging 15-25 at a time.)

Many thanks must be extended to Danhiel, the NNTP abuse czar at Critical Path (the company that runs Supernews), for tweaking the filters so that we can avoid this problem in the future. (Thanks, Danhiel. As usual, you've been quite helpful.)

Everything is back to normal. The 37 articles I had in my queue were posted and showed up in a matter of minutes.

Thanks for your patience!

>they're off? That might save them some money,too.(Also, an interesting side

Are you watching on cable? The station might indeed be turning off its transmitter, but many cable systems have a direct wire (actually usually optical fiber) link to the stations. So you'll see something on cable even if the transmitter is off.

In any case... Electronics, especially high-powered stuff like transmitters, tend to suffer the most strain when being turned on. A transmitter that's been turned off overnight is far more likely to break down at signon than at any other time. There are other risks, like that of critters deciding to sleep in the nice quiet, sheltered metal enclosure & then facing a violent death when the high voltage (or big rotating blowers...) comes back on...

Yes... I play a really wide variety of well over 2000 songs now and adding more every day. VARIETY is what makes it unique. And, no, it's not all music that *I* like... if someone wants to hear a song , I'll play it! It's a great break from the 300 song playlist syndrome... For example, right now I'm playing stuff like Enya and Tim Story until 6 AM when it switches back to Rock/CHR/Gold.

re: most directional AM station in North America

Don't forget 900 CHML in Hamilton, Ontario. Their daytime signal pumps 50,000 watts into an 8-tower array, resulting in the equivalent of about 850,000 watts aimed towards the southeast. With their nighttime signal, using the same input power and tower set-up, it drops down to about the equivalent of 750,000 watts, again towards the southeast.

During cloudy winter days I can hear CHML clearly all day long -- even in broad daylight -- here in New Jersey.

In some cases, you will keep the transmitter "on the air" to keep it from
freezing. Sometimes it's left "on" to keep it from going out of adjustment,
and sometimes so you know it'll be running in the morning (as in, if you
don't turn it off, you don't have to worry about it not turning back on).

DIfferent stations will have different guidelines for when and how much
to turn off or turn down.

BTW, please wrap your lines to, say, column 70, not 80.

Thank your lucky stars for what you're getting. That's the kind of station I started at and learned the basic stuff that's still important to me today. Suck it up. Learn everything about that little station that you can. You'll have more opportunity to learn there than at any job that follows it.

First, let me explain, again, that virtually every radio station is
owned by a corporation. It's nothing more than a legal construct that
gives certain protections and benefits to the people who create them.
OK. Now do the math.

Clear Channel owns about 1200 stations, every other corporation owns
far less. Infinity is up there as are a few more. The total they all
own combined comes to less than 4000 stations. That leaves 8000
stations in the hands of smaller operators. There are a lot of sources
for this information, so there's nothing secret.

Rich

>buddy Richie Wood up there to check it out."

I'm willing to bet Randy Michaels has been to Springfield and knows just what the station sounds like. Actually, Randy is one of my heroes. Under Jacor he ran an aggressive, take no prisoners company, both on and off the air. Stories abound about Randy driving through a city where he owned a station, finding it sounded bad, and actually going in and fixing it.

It would be hard to find someone in this business today who lives and breathes radio the way Randy Michaels does. That's why I find it so funny to read all this "corporate radio" crap that claims no one cares anymore.

My job is to deal with people at all levels of radio. I still meet rooms full of people at conventions who love what they do and honestly care about the product they deliver. It may not be the product you would deliver if you had the job, but it works. It makes money and it pleases lots of people who listen to radio.

> outside of their parameters.

I've found just the opposite to be true in my engineering experiences. The local O&O's are more likely to keep things up to spec because they don't have all the resources and money that a chain like CC does to defend themselves when the feds pay them a visit with an NAL. Of course there's exceptions to everything... around here, a lot of the stations are chain owned (Cumulus, Citadel and Regency) and al of the Cumulus stations are horrible in the technical aspect. Pirates operate better than they do!

This is true... all of the stations around this market have been shaken out multiple times, so almost all of the good veteras either left the market or left radio... there was a period here where the "Monday morning pink slip" seemed to be following us from station to station. We'd get shook out of one station, go to another, then that one would sell and dump th staff... onto another... same thing... many very talented and gifted radio people jumped ship from broadcasting during this period. This started in 1985 and continued until recently... I decided to try to hang in there but found the road was littered with too many casualties. For several years, I worked 2-3 jobs just to survive. I'm a team player and dedicated employee... Imjust tired of being sold out every 6 months.

My taste is simply to hear more than 300 songs repeat endlessly and some halfway acceptable audio quality... I'll listen to AM if that's where the good programs are (but it isn't) but I can't listen to either if it so distorted that it fatigues my ears almost immediately!

Most are... some a bit more, some less... but definately far below average pay rates of $13 an hour.

My guess is that he is there
> because he didn't complain when they installed a digital delivery system,
> and he embraced the new technology.

I embraced the technology too, until it replaced me completely a few times... I would have killed for some of the digital equipment that's out there today in the 70's and 80's!! But when Jones Satellite is the preferred format in the marketplace, that pretty much squeezes us vetrans out the door.

My guess is that he probably has a
> favorable attitude about his job and doesn't sit around complaining all
the
> time.

I've always gave 125% of myself to performing good quality radio... many times when I worked 12 to 18 hour days anddidn't complain... are ou insinuating that if you were blown out of your station right now, you wouldn't complain??

> But the real thing here is, air talent has never been an avenue to wealth.

Only in the rarest instances... Wolfman Jack, etc.

> It has always been the case that, with rare exceptions, the owners and
sales
> staff made the big bucks.

True... but at least owners in the old days had at least SOME idea of how to work on air... when WalMart manager types started getting in as PD's and OM's, that's when things get bad. I just wish that the owners today had a

little respect of the medium and would stop exploiting everything and everyone... it's sick!!

Why in the world did you get into this business
> if money was so important?

I got into radio because I love it and I have a natural gift for it. Money wasn't important when I was 15... but I know I have to earn a certan amount of money to eat, pay rent, car payments, etc. I don't live a very high lifestyle by any means... rent an apartment, both of my cars together are under $225 a month... So, I need to clear $450 a week take home to live... it's just the cost of living... I **CAN'T** exist on $6 an hour. There's just no way unless I buy a $1000 trailer in a run down park, which I am not going to do...

Most of the people I went to school with are
> building their IRA's and investment portfolios, preparing for retirement.

same here...

As I understand it, the cooling and rewarming of the transmitter could be
more stress on the transmitter than just leaving it on. Also, transmitters
sometimes will drift around in their frequency emissions while warming up,
but this isn't nearly as true with todays solid state circuitry as it was
with older tube transmitters.

The first license to be issued specifically for broadcasting was KDKA's in late 1920. (though it was actually licensed as a "limited commercial" station; the "broadcasting" service didn't come into being for a few more years)

Before that time, stations involved in broadcasting were licensed as experimental stations. The callsign formats were indeed similar to those of amateurs. (WHA's call at the time was 9XM. The X after the 9 meant an experimental station. Y meant training stations, Z had a particular meaning too but I forget what. Hams got A-W. The K and W prefixes didn't come until later.)

At the time, it was still legal for radio amateurs to broadcast to the general public, so some of these early broadcasters actually *were* ham-radio stations.

If you don't mind am radio, KKYX San Antonio comes in pretty good on
the West side of Houston. It's been country forever(?), although I'm
not sure when they abandoned "current" country for country gold. At any
rate, it does a pretty good job with the format.
As I recall KIKK am (Pasadena-Houston) was once country gold during
non-drive times, but they the resorted to full-time simulcast with KIKK
fm -- and now have a satellite delivered business news format. With its
pitiful signal, I'm suprised it doesn't just go dark.

I don't believe that station automation is evil. I think that the evil is when you use station automation to lay people off, rather than to make a station possible. Let me explain:

The big corporations like CC are only interested in dominating the market and maximizing the bottom line. They use automation so that they can take central control of their stations and reduce the actual staff needed in an effort to reduce the costs. Before automation, the quality of programming was better.

The small station, though, that is being run by a bunch of peole with day jobs other than the station, can raise their quality of programming by automation, allowing themselves to be on 24/7.

So really, what it comes down to is that automation for the purpose of control is evil, automation for the improvement of programming quality is not.

BTW, I've run such a nanopower station myself. Mostly news/talk format.

SagiGemi <sagigemi@aol.com> had written:
|There are some tv stations, they go off the air,and they just leave up the
|coloured bars test pattern, and/or put the station's logo on the screen, while
|they are off the air. Why don't they just turn off the
|transmitter (snow) while
|they're off?

Others have answered that particular question, but I will chime in
with another example. KMTP (ch 32) in San Francisco, until last
year, did not sign on until 12 noon. When off the air, it showed a
test pattern with a crude CG super over it saying "KMTP-TV 32".

Now, from 5-9 am, KMTP is able to fill the time with...traffic
reports! Yes, continuous automated "Traffic Check" reports with computer
displays and synthesized voice announcements of traffic problems.
I suppose that would be useful BEFORE hopping off to work in the
morning, but it seems that radio traffic reports are far more
useful once you're IN the car.

The usefulness of KMTP generally is doubtful, but at least it's not
more infomercials and preachers.

Here in New jersey, the "New Jersey Network" (NJN) PBS stations --
ch. 23 in Camden, ch. 50 in Trenton, ch. 52 in Montclair, and ch. 58 in
New Brusnwick -- all sign off the air at midnight every day, and sign
back on at 8:00 AM. And they all go *completely* off the air; they may
run a color-bars test pattern for a couple minutes after midnight, but then
all four stations turn off their transmitters.

This is an absolutely unbelievable statement, and you should be as
ashamed of it as Johnny Neutron should be of his claptrap.

At one time in this country, radio was so popular that theatres would
postpone movies so that the audience could hear popular radio
programs.

At another, you could stand on a street corner and listen to radio
coming from nearly every car.

The answer depends on how you ask the question, and if you define
radio listenership as somebody merely hearing a radio on in the
background in an office, that plus our population increase supports
such a statement.

But using such a misleading argument for any reasonable purpose is
completely disingenuous. These corporations that own hundreds of
stations justify the relaxation of multiple ownership requirements by
saying that these economies of scale are necessary because of radio's
inability to compete against other newer media without them.

If in fact radio listenership is somehow better than its ever been,
then they must have been lying to us about the necessity of reduced
ownership restrictions.

While radio listenership has increased, the number of signals has increased by a disproportionate amount, with the result being, in most cases, fewer listeners for each station. The theory behind reducing ownership restrictions was that by combining ownership, we could keep all these marginal and unnecessary signals on the air, which otherwise would have gone dark as their owners went broke. And that part worked. The unintended (albeit easily predictable) consequences are what made it a bad idea.

re: most directional AM station in North America

Don't forget 900 CHML in Hamilton, Ontario ...
>>

Good one!

A field ratio (pattern maximum to pattern RMS) of about 4, for a power ratio of about 16.

So, somewhat more directive than Dallas' 1190.

Note the exceptionally wide spacing of CHML's line of it's four towers (two rows), and KJOI's more conventional spacing of it's six towers (also two rows).

CHML has little ability to control its many nulls, local maxima and local minima.

When did WJKN go off the air? I was going through Jackson in 1999 and
found it to be a nice local station.

I am a freelance reporter, currently composing an article on the topic of local (Upstate SC) radio. I am in the preliminary stages, and I am trying to ensure that I am on the right track. As such, I am hoping that someone there might be able to advise me in some capacity as to the radio related issues that the general listening public might care about. Thus far, I have deduced that low power FM, single ownership of multiple stations, and "internet radio" are hot topics. Any suggestions?

Thanks for any help you might be able to offer.

Don't forget that sometimes they leave bars (and tone) up for
engineering purposes. Maybe they are tweaking the studio to
transmitter link. Or maybe they are measuring transmitter coverage or
tuning the transmitter.

This is unheard of around here... the owners here have no technical ear whatsoever and if the mods were melting, I don't think they'd even notice. There's exceptions to everything, and I'm glad to see that at least SOMEBODY in these groups care. In the old school, engineers like myself took great pains to make sure the airsound was good. I've even "loaned" my own processing equipment to stations that needed it.

In the days before CRL Systems, Aphex Compellors and Texar Prisms, you were damn lucky to have something besides a rusty old pair of Gates Solid Statesman limiters/AGC or CBS Audiomax/Volumax. Having a DAP 310 with a brightness card followed with a UREI LN1176, or having a Multimax/Multilimiter combo, or to really push it, running an Innovonics MAP 3 or Optimod was definately the shit! To get those old broadband pairs to sound decent was about impossible. Keeping the old Gates stuff from pumping WAS impossible, same with CBS labs... I would have killed for a gain-rider as transparent as a Compellor in those days. Trying to keep them running in their sweet spot was no small task. There was a toss up between weak audio, distortion and background noise or pumping!! Choose the one that offended least and satisfied the PD and owner best... usually they preferred the high compression with pumping, noise pull up and distortion over clean processing. Todays stations should sound SOOO much better than they do with all the awesome processing that's out there now... but most sound worse than ever... so what gives?

Are you trying to tell me that the majority of stations are locally O&O???
Not in Michigan, I'll promise you that!! The majority of stations are group
owned... Citadel, Regency, McDonald and Cumulus own so many properties that
I don't think there's any privately owned stations left that CC or any other
group would even mess with... little 1kW AM's, dark daytimers, 3kW FM's in
small markets with weak or nonexistant medium market coverage... properties
that go dark every other year... that's all that's left and the majority of
them are old 80-90 docket stations. BEtween the cookie cutters nad satellite
stations, radio sucks around here!

From his previous post, he apparently does have some listeners in his immediate neighborhood, so he may well be providing an alternative that appeals to a group of people.

What I'm reminded of is an unlicensed oldies station in the Dallas suburb of Addison several years back that I would listen to when I was in that part of town. I mentioned it to a friend who worked in Addison, and he made it his "listen at work" station because he liked the rather quirky mix of music that they played. In turn, several of his coworkers started listening, too.

Now I'm sure that they were no threat to 100kw oldies giant KLUV, but they did provide a service that appealed to people other than the people running the station. Perhaps the guy with the 50 mw FM station is also providing this sort of service. I don't see why this needs to be attacked, since not everything needs to be targetted to breaking into the top ten...

I'm trying to play my MP3 CD's from my portable player over my car stereo. Radio Shack has some small FM transmitter that hooks into my headphone jack and transmitts over a choice of 4 frequencies to my car receiver. It sucks!! i had to wrap the transmitters antenna around my car antenna to get good reception. The freqs i had to choose from were too close to used freqs. I found this http://www.internet-promotions.com/cew-electronic/tech.html does anyone know about it? Can anyone offer another idea?
Thanks!

They pulled the plug last fall... the rumormill says that the land their towers sit on was sold and they have to move them... It'll be quite a while before they're back on. Last time I was thru there was in early 1999 and they were full-service... music, new, whatever... it was a refreshing station to listen to... kind of like K-FYR 550 in Bismarck, ND... at least they were good last time I was thru ND... hard saying now... radio changes too fast to depend on a station being the same for long...

Actually, as I recall, Arbitron has shown a slight decline in total
radio listening through the nineties, which means that by any definition
radio listening is probably down.

It might be an absolutely unbelievable statement, and maybe I should be as ashamed of Johnny Neutron for using this claptrap, but my statement is absolutely, beyond any question TRUE!
In sheer numbers, more people listen to radio today in the USA that at any other time in radio's history. I could care less about percentages of population or share, in sheer numbers, more people listen to radio today that at any time in history. I don't care is the AC or Smooth Jazz is being force-fed to people at work, more people listen to radio today than at any time in history.
Actual numbers will be presented upon request, but please don't make me do the research to prove what is factual and is common knowledge in this newsgroup.

When I previously lived in Cleveland, WCLV had a jazz program, as I recall, it was one of the few sources of jazz at the time in the area until WKSU began for a while to play jazz at night. Does that programming still exist on saturday nights? Also, does the station still have the distinct audio sound for mikes in the studio, I can't quite describe it, but I sure would not want to have kept that sound going.

This is a methodology fight, and we've been having them in this
newsgroup for at least 5 years maybe more.

I am well aware that you can produce a report, paid for by the
agencies and the radio stations themselves, that shows radio is being
"listened to" like never before.

But "the answer you get depends on how you ask the question," and that
is why I included that statement in my original post.

Clinton was right on when he said "It depends on how you define 'is'".

The folks who do research control it by the design and wording of the
questions.

When you define "listen" so broadly that the "listener's" relationship
with the station is so tangential that they often couldn't hear any
spoken words on the station, it cuts the credibility out of the
numbers when you try to use them for anything like swaying consumer
opinion.

I look askance at what goes on in the sales department of radio
stations, particularly over the last 20 years when it was important to
make radio vital through surveys that will take just about anything as
"radio listenership."

If it were newspapers, a congruent question might be "Did you see a
paper today, like on a newstand or in a rack?"

We need to add the phrase "radio research" to "laws and sausages" as
things you really don't want to see made up close and personal.

>on saturday nights?

I don't think so, and I don't think KSU does either, at least not judging by looking at their respective websites, wksu.org and wclv.com.

The advent of a full-time jazz/blues station in Cleveland kinda makes programming like that superfluous, although I did hear CLV's jazz program as recently as last year.

Tom Desmond <tdesmond@sprynet.com> had written:
|
| From his previous post, he apparently does have some listeners in his
| immediate neighborhood, so he may well be providing an alternative that
| appeals to a group of people.
|
There was in 1997 the pirate in Kansas City who was programming Spanish-language news and music, largely on an automated basis. At the time, the only Spanish-language programming was four hours a week on a suburban AM station. "KCMG" provided the service fulltime. Was this good? Was this bad? I think it was a good example of how double-edged the pirate/LPFM sword could be. The technical quality of "KCMG" was atrocious and it might have interfered with the licensed rimshot at 107.3 on poorer-quality radios. Yet it did provide a service that no one else provided.

FCC shut him down, of course. Since then, two AMs have switched to Spanish-language formats in Kansas City (I believe one has since gone on to do something else.) So he might have been onto something.

> in broad daylight -- here in New Jersey.

The pattern is depicted here:
<http://www.radiostation.com/cgi-radio/recno.pl?band=AM&pos=798634>

But the axes are flipped around. They are actually like this:

E

S N

W

So the lobe to the upper left is actually toward the SE. The map is blank because the source doesn't include Canada.

You can do lookups for lots of places by going to <http://www.radiostation.com/kodis/> and entering whatever variables you like. Here's the table for stations in the New York area:
<http://www.radiostation.com/cgi-radio/loc.pl?loc=New+York%2C+NY&type=tbl&band=am&dist=30&unit=mi&keep=4&sort=near&freq=>

As for directional stations, check out the night patterns for Detroit stations on 950, 1130, 1200 and 1500:
<http://www.radiostation.com/cgi-radio/recno.pl?band=AM&pos=952400>
<http://www.radiostation.com/cgi-radio/recno.pl?band=AM&pos=1439918>
<http://www.radiostation.com/cgi-radio/recno.pl?band=AM&pos=1622579>
<http://www.radiostation.com/cgi-radio/recno.pl?band=AM&pos=2892943>

The number of towers involved are 6, 9, 10 and 12. Within 40 miles of Detroit there are a pile of stations with 5 or more towers:
<http://www.radiostation.com/cgi-radio/loc.pl?loc=Detroit%2C+MI&type=tbl&band=am&dist=40&unit=mi&keep=5&sort=near&freq=>

Check out CKLW's bug-splat 5-tower day pattern:
<http://www.radiostation.com/cgi-radio/recno.pl?band=AM&pos=567698>

Unfortunately, the data hasn't been updated since May, 1997.

According to an article I just read in "Return With Us Now", the journal of the Radio Historical Association of Colorado, 9XM was authorized to continue its telephone exchange with the U. S. Navy stations on the Great Lakes during the war.

The quirky mix wasn't the issue. It was horrible, big, bad
corporations running automation. Now we find his own station is
automated.

He's helping contribute to the downfall of radio. He isn't providing
jobs. he should move over and give the frequency to a pirate that will
create jobs for out of work jocks.

Stations operating in the Traveler's Information Service, TIS, may only
be licensed to Governmental agencies (Ports, Highway Departments, Parks
etc.) they may not be licensed to private individuals or corporations.

It is possible the station you heard was a very low power service
operating under Part 15, but it would be unlikely you could reliably
hear a legal Part 15 station more than a handful of blocks away.

I don't give a hang about ratings. Ratings are for advertisers, and as a listener, I don't care. Yes, this is my personal opinion, and that is all I'm offering.

It is my *opinion* that automated music programming, as provided by Albany Broadcasting Co, or by CC (the two major owners in this market) is boring. It's good for a day or two of listening, tops, then it just gets repetitive.

> Or, do you have an axe to grind (let go because of automation)? Broad

Nope, I never worked in professional broadcasting, I am strictly speaking as a listener, though in fairness, I should probably mention that I am involved in a local (licensed) community radio station.

From: "Rock-it Radio listeners club" <Rockitradio@aol.com>
Subject: Rock-it Radio launches shows #275 and #276

Rock-it Radio listeners club - http://www.rockitradio.net

Hello Everyone,

Just a note to let you know that 2 more Rock-it shows are available
in our Archives. Rock-it Radio show #275 is from our
Austrian DJ Otto Fuchs with some Great mostly European Rockabilly from
bands that you do not hear every day here in the States!! and of course
some great Rockabilly standards as well.
Rock-it Radio show #276 is Lane Quigley and the Memory Lane show
popular series of "Forgotten Top 20's" This is Lane's 15th edition of
Forgotten Top 20's on the Rock-it and they just seem to
get better and better. Below are the playlists of the 2 shows...

~~~~~~

Rock-it Radio #275
Otto Fuchs and the Rocket 88 show

Otto Fuchs hosts another Rocket 88 show
outta his studio "B-A-D" in Baden/Austria

Some great rockabilly, classic & contemporary plus
a Rocket 88 spotlight on "Rockabilly Hall Of Fame Inductee" RED MOORE !!!

Here the songlist:

01. Everyday -- Continentals
02. The Ghosts Are Screaming Tonight-- Darrel Higham & The
Enforcers
03. Rockability-- Stray Cats
04. Long Black Train --Woodchoppers
05. Who Do You Think You Are? --Cryptkickers
06. Lonely Hearts --Jets
10. Nobody´s Guy --Blue Devils
11. Lost John --Johnny Bach & The Moonshine Boozers
12. What To Do --Buddy Holly
13. Tales From The Vienna Woods/Hungarian Rhapsody-- Bill
Haley & The Comets
14. Hatsemelyes Cadillac --Dolly Roll
15. But I Don´t Care --Matchbox with Andy Lee Lang
16. Broken Heart --Badland Slingers
~~~~~~

17. Summertime Blues --Mess Of Booze
18. Set Me Free --Rockabilly Mafia
19. Hello There Old Rockin´Chair --Sid King & The 5 Strings
20. London Is My Hillbilly Home --Johnny Key & The Kool
Kats
21. Batman --Bob & The Bearcats
22. Let´s Get Wild --Rudy Grayzell with The Skeletons
23. Wild Wild Women --Johnny Carroll
24. Rockabilly Ready --Mac Curtis with The Rimshots
25. Dream girl --The Billys
26. So Round So Fat, So Firmly Packed ...-- Salty Dogs
27. Crawdad Song --Red Moore
28. I´ll Take Good Care Of Your Baby-- Ralph Emery
29. Columbus Stockade Blues --Red Moore
30. I´ll Miss You When You´re Gone --Red Moore
31. Coolest Hepcat Under The Sun --Hicksville Bombers
32. Cafe A La Rock --Bill Haley´s Comets

To Download Rock-it Radio show #275 just go to our archives program page
at http://www.palmsradio.com/rockittext.htm
and click to show #275 ... it does require a real Player -- if you don't
have one you can download one for free at http://www.real.com

Rock-it Radio show #276

More Forgotten Top 20's with Lane!

By popular demand, Host Lane Quigley presents the 15th installment of
FORGOTTEN TOP 20's on The Memory Lane Show. You'll hear a great variety
of lost hits from the early years of rock and roll.

You'll enjoy duets from Gino & Gina, Ronald & Ruby, and Brook & Dinah;
Surfbeat from The Routers and The Ventures; country-flavored rock from
The Everly Brothers and Bonnie Lou; Blues from Little Johnny Taylor; Pop
from The Crew Cuts, Gene Pitney, Annette and Paul Anka; Doo Wop from The
Shields; Teen Tunes from Johnny Maestro and Carl Dobkins Jr.; Soul from
The Impressions and Carla Thomas; Movie themes from The Hilltoppers and
Leroy Holmes; Folk from Chubby Checker; R&B from Lavern Baker and Marv
Johnson; Rock from Elvis, Ricky and U.S. Bonds -- and much more. Lane
even goes back to World War II to spotlight one of the most influential
records in the formative days of Rhythm & Blues!

Give a listen to thirty slices of popular music history -- all former top
twenty U.S. Chart hits that are ignored by today's radio programmers.
Here's the playlist:
~~~~~~

1. Let's Go - The Routers [#19 1962]
2. Chip Chip - Gene McDaniels [#10 1962]
3. Tweedle Dee - Lavern Baker [#14 1955]
4. (It's Been a Long Time) Pretty Baby - Gino & Gina [#20 1958]
5. Follow That Dream - Elvis Presley [#15 1962]
6. You're My One and Only Love - Ricky Nelson [#14 1957]
7. Baby (You've Got What It Takes) - Brook Benton & Dinah Washington [#5 1960]
8. You've Got What It Takes - Marv Johnson [#10 1960]
9. You Cheated - The Shields [#13 1958]
10. Twenty Miles - Chubby Checker [#15 1963]
11. Lollipop - Ronald & Ruby [#20 1958]
12. Walk Don't Run 64 - The Ventures [#8 1964]
13. Part Time Love - Little Johnny Taylor [#19 1963]
14. My Heart Is An Open Book - Carl Dobkins, Jr. [#3 1959]
15. Crazy Bout You Baby - The Crew Cuts [#8 1954]
16. Dear Lady Twist - Gary "U.S." Bonds [#9 1962]
17. Daddy-O - Bonnie Lou [#14 1955]
18. Model Girl - Johnny Maestro [#20 1961]
19. Tall Paul - Annette [#7 1959]
20. I Wonder - Cecil Gant [#20 1945]
21. Bird Dog - The Everly Brothers [#1 1958]
22. Runaround - The Three Chuckles [#20 1954]
23. 24 Hours From Tulsa - Gene Pitney [#17 1963]
24. Walkin' The Dog - Rufus Thomas [#10 1963]
25. Gee Whiz (Look at His Eyes) - Carla Thomas [#10 1961]
26. (My Baby Don't Love Me) No More - The DeJohn Sisters {#6 1955]
27. My Home Town - Paul Anka [#8 1960]
28. The Kentuckian Song - The Hilltoppers featuring Jimmy Sacca [#20 1955]
29. I'm So Proud - The Impressions [#14 1964]
30. The High and the Mighty - Leroy Homes [#9 1954]

A four day celebration Festival to honor historic artist

Shelby Singleton, owner of the legendary Sun Record Company, will host the "Tour" and"Artists Party" which will inaugurate this "Hall of Fame"
and
weekend of music, dancing, tours, schools, pin-up girls, celebrity dinners, in Jackson, Tennessee. The "Artist Party" is Thursday night June 28th and the festival will open to the public June 29th, 30th and July 1st. the INTERNATIONAL ROCK-A-BILLY HALL OF FAME, INC. will be located at 105 N. Church Street, (downtown) Jackson, Tennessee.

Robert Rowan, President, Jackson Homebuilders Association, is now completing interior planning and contractors from the home builders association will begin work within two weeks in
Order to have the INTERNATIONAL ROCK-A-BILLY HALL OF FAME, INC. open for the public BY June 28th.

THE INTERNATIONAL ROCK-A-BILLY HALL OF FAME, INC.
FOUR DAY FESTIVAL INCLUDES:
1. Bus tour of Graceland and Beale Street, drive by the Mighty Mississippi River on Riverside Drive, Memphis
2. the Celebrity luncheon party, meet all the stars
3. Learn the rockabilly music business at the Dick McVey Performance School, Lambuth University, little Theatre,
4. And dance, sing and applaud for over 30 hours to the music
Of the worlds greatest performers. See www.rockabillyhall.org <http://www.rockabillyhall.org> for a partial list of performers.
We're gonna' "Rock around the Clock" Henry Harrison Concrete Productions Co. (731) 427-8521.

~~~~~~

Iditarod Coverage

Well we will have limited access to the internet as I will be working on the internet coverage of the 2001 International Iditarod Dog Sled Race for the internet and our sister station: First Nations Broadcasting. We invite you to check out this great annual event that
puts dogs and man vs. nature and the elements of Northern Alaska across a 1,049 mile dogsled race across the Alaskan Wilderness starting March 3rd. To check out First Nations Broadcasting there website is: http://www.palmsradio.com/upnorth.html

Of course you can still e mail us your requests and dedications and we will get to them as soon as we can.... our e mail address is: Rockitradio@aol.com

If you haven't joined the Rock-it Radio listeners club yet and would like too... it's easy to do and keeps you in the know of what's happening here at the rock-it and gives the playlists of all our shows that we are putting out....
All you have to do is go to our main website at:
http://www.rockitradio.net and at the top of the page enter your e mail
~~~~~~

address and where it says "listbot" press that button and follow the instructions from there and you are in!

Have a great Weekend everybody!!!

Bennie Dingo
Rock-it Radio

e mail: Rockitradio@aol.com

In fact, lighting only one or two towers in a DA is an option available to
most DA system owners via a relatively simple application process.

Automation is neither good nor bad. It is simply a way of getting a signal on the air. It's just a tool, like a hammer or a paint brush. It what you do with the tool that counts. At this point, talent takes over. Some people use a paint brush to create great art. Others paint walls. A good programmer can make an automated station sound pretty good. A clueless programmer will deliver tripe.

I still haven't seen a response regarding the deletion of the posts
regarding 620/Clear Channel and the Devil Rays pursuit of a convicted
criminal for their team.

I really would like to know what, if any , connection you people have with
CC and why those posts were dropped.

For the record , Mr. Sponge had nothing to do with my posts, as I don't
listen to him, and am not aware of anything he may or may not have said
regarding this situation.

So, Gentlemen.....for the final time. Why were those posts criticizing CC
and the Rays for their
less than ethical recruiting, deleted?

1204. Kodis' Site Pattern Errors

Newsgroup: rec.radio.broadcasting
Date: 2001-03-05 15:19:09 UTC
From: peterh5322@aol.com
Message-ID: <ta7bjdltp6vd5f@corp.supernews.com>
Source record: 15269

The new Kodis site is in error (but at least it is nice to have it back again).

The pattern is rendered as a mirror image of the actual pattern, rotated 90 degrees CCW.

To get the correct pattern, take the mirror image of the rendered pattern and rotate it 90 degrees CW.

The pattern RMS data is missing.

The circle representing the pattern maximum is in fact the ratio of the pattern maximum to the pattern RMS, but as neither field is reported, neither can be computed.

The only way to get the RMS data is to go to the FCC engineering database.

Radiators other than conventional non-sectional non-top-loaded (IOW, other than Sect=0) are still reported as zero height.

The only way to get the correct radiator type and height(s) is to go to the FCC engineering database.

One benefit of this unique (but incomplete) reporting method is arrays can be quickly scanned for their directionality as the field ratio of the pattern maximum to the pattern RMS is given.

From that the power ratio may be computed by squaring the reported field ratio.

And from that the equivalent power in the main lobe may be computed by multiplying by the authorized power (incorrectly reported as "effective radiated power").

For KLUV/1190, Dallas, the field ratio is presently being reported as 3.908. The corresponding power ratio is 15.272. The corresponding effective (radiated) power in the main lobe may be computed by multiplying by 5,000 watts, for a result of 76,362.320 watts towards Dallas and Fort Worth.

Peter.

They sure did. I lived in Charlotte during 1995-96. When I moved to Orlando, I liked to hear WBTV (Channel 3) 11:00 news, which was simulcast over WBT. Wasn't very happy to hear them being wiped out by WBCA on SEVERAL occasions.

I personally filed a complaint with the FCC over that one.

Two years' ago, when the Boston Red Sox began lobbying for massive public assistance in building a new ball park, (the amounts "requested" began at $115 million and are now in the range of "blank check") the Red Sox' house station seemed to have adopted a "shout 'em down" policy on their station - if anyone called in and was critical of the plan, they would be shouted down and dumped.

It's sort of the radio equivalent of punching someone in the nose. I realize that the dump button is there to enforce certain standards, but if a talk host has to hit the dump button on someone who wants to discuss an issue, he/she has lost the argument already.

What was REALLY funny was that the hosts were even saying, during this time, that Boston was really a small market and that's why the Red Sox couldn't compete! I'm sure it didn't last long, probably as long as it took for an advertiser to call and request small market rates!

I assume this "convicted criminal" will be serving time and will miss
a few games. Doesn't that reduce his value. Unless, he has served is
time.

In the event he's served his time or fulfilled whatever obligation the
court assigned him why would the recruiting be unethical? Actually,
serving time doing sports would seem to me to be cruel and unusual
punishment. If a judge gave me a choice between jail time and doing
play-by-play I choose OZ.

This is from the 3/3 edition of the Tampa Tribune. This incident was not allowed to be mentioned on the radio-info.com board...

Wild boar slain during radio show
ACE ATKINS
of The Tampa Tribune

Blood-stained asphalt and a freezer full of potential barbecue was all that remained of the victim.

The slaughter happened Tuesday during a live radio show. The victim, a live boar, was held down in a parking lot while its testicles were removed and its back broken. Concerned callers flooded police telephone lines with complaints.

The crime? Well, police aren't sure yet.

The boar died during a radio show stunt on Bubba the Love Sponge's Roadkill Barbecue Day, when listeners could bring in carcasses to barbecue on the show.

Arrest Bubba, whose real name is Todd Clem, many said. A leader of a national animal rights association had even called for Bubba's arrest.

By Friday, Tampa police had sent their top homicide detectives to investigate.

Bubba wouldn't talk. The station manager of WXTB, 97.9 FM, didn't add much other than that he was cooperating with police.

Sgt. Jim Simonson, head of the homicide squad, wasn't sure if what happened was a crime. He thought the castration could lead to animal cruelty charges.

By late Friday, an attorney for Clear Channel Communications - parent company for 98 Rock - said he could straighten everything out.

Yes, a pig had been killed.

``A wild boar with sharp tusks that could really hurt people,'' said Brian Albritton.

Yes, the pig's testicles had been slashed away.

``A common practice by hunters to protect the taste of the meat from too much testosterone,'' he said.

The lawyer said the squealing sounds that alarmed listeners were not the boar's. He said they came from Bubba's sound reproduction board.

And the man who killed the boar was a veteran hunter who knew what he was doing.

He trapped the animal and was going to kill it anyway.

``The animal was not prodded or paraded about,'' he said. ``It was taken out gently from a cage by a rope, put down on the ground and held. He was immediately castrated and immediately killed. It died instantly.''

Gary Yourofsky, founder of Animals Deserve Absolute Protection Today and Tomorrow, says Bubba and the hunter should be prosecuted.

``I think he should be castrated, too, and see what it feels like,'' said Yourofsky from his Michigan home. ``I wonder what that pig was thinking when they cut its [testicles] off ... If Bubba thinks he's a man for this, he's wrong.''

Yourofsky - who was once arrested for freeing 1,500 mink from a farm - says Bubba should be held to the same police scrutiny as those who protest animal abuse.

``My request to Tampa police is to harass [Bubba] the way they have harassed me when I've tried to free animals from cruelty,'' he said.

Ace Atkins can be reached at (813) 259-7800 or watkins@tampatrib.com

Rich, one of the problems with your argument is considering the locale where
the stations are owned. I'ld bet that most major markets (OK, as former MA
residents, we both know Springfield isn't) have a lot of the major players
(i.e. the 4000 you mention). I'm definitely not sure that large corporations
with lots of stations is an improvement either in quality or sanity.

I remember when KLDE was promoting it's "all CD" oldies format back in the mid-'80's, and I listened to it often on my daily commute. That was about 15 years ago. The only reason their "oldies" format was a little different than the "oldies" crap format that's been churned out since at least the early '80's is that KLDE threw in more harder-edged music (a little Jimi Hendrix, and no Neil Sedaka, thank God). Now I live in Colorado, and that crap oldies mess, the same shit I listened to in high school, is still being ladled out and, even more surprising, apparantly draws enough listeners to turn a profit. That's why I have my vinyl and CDs. There's so much great '60s/'70s music out there that never gets on the air, with the exception of a random play on some public/college station. Even KLDE's format got a bit tired after awhile. I dream of the day when the public boycotts corporate radio and demands real jocks playing real music from the point of origin, not via satellite to some dozens of stations across the country. Sadly, that day will probably never happen.
'Scuse my rant.

Doug Smith, W9WI, wrote:

"At the time, it was still legal for radio amateurs to broadcast to the general public, so some of these early broadcasters actually *were* ham-radio stations."

Even in the 1930s, although amateurs couldn't broadcast to the public, they could still broadcast music if they were testing modulation equipment; this allowed Major Armstrong to test and demonstrate FM on the old 2 1/2 meter amateur band without having to get an experimental license (as he did later, first for his tests on NBC's W2XBS TV transmitter, later for W2XMN in New Jersey). I have a feeling that a bunch of hams were playing records to each other (and their non-licensed friends and relatives with "all-wave" radios) on the HF bands, and that was the reason that the FCC finally banned music from the amateur service.

1215. Eurobird launch date postponed again

The launch of Eurobird, the new satellite to be positioned next to the Astra 2 series satellites at 28.5 degrees East, has been postponed once more - it's now scheduled to lift off on Thursday March 8. It was initially due to lift off this Friday, however additional testing of the Ariane 5 launcher has been needed. The satellite will feature 18 transponders in the frequency range 11.200MHz-11.700MHz and six between 12.500-12.750MHz. It replaces Eutelsat II F4 and due to its proximity to the Astra 2 series satellites, its channels will be receivable through Sky Digiboxes using the 'Add Channels' function. [Feb 28]

A lot of this has to do with keeping the tubes hot (like leaving an AM on
filaments at night) as some (like klystrons) are a real pain to tweak and
they drift when colled off for any length of time. Also, some do equipment
alignments during the color bar periods.

Let me inject my "sundry" opinion here! :-)

MY definition/opinion of "listening" means that someone has dialed into the program for "intentful" purposes... to hear a certain show, jock, songs, etc., to "intently" listen to the programming.

A good example would be tuning into the "Lush Limbo" talk show with the intent of hearing the "various and sundry" opinions of the said "Lush Limbo" and his guests, or to hear "J.C' Wasteum's Top Thirty to hear the top songs of the week.

It is *NOT* "background music" at the mall and doctor's office, or punching around to hear the sports scores, traffic or time. The other examples of button pushing for traffic reports, time checks, sports scores, etc., constitute "info grabbing" IMO and not really "listening". I would be of the opinion that there is more of this "info grabbing" going on (low TSL) than "intent listening", definitely where music formats are concerned.

The reason I believe this is that I have enough "non-radio" friends that feel the talent isn't good enough anymore to sustain any amount of time on one frequency.

Other feelings I gather from these "non-radio" types are:

-Air staffs are for the most part generic, all sound alike

-There's always a better song on the next button

-When stop sets occur, they hit the button

-It rarely has a local element to it at all because there's NO local interaction or mentions(they feel they're listening to a machine rather than actual people)

-Even *they* notice things like the locally-executed drop-liners (the "106-5 K-BLO" Jones satellite type stuff) before the satellite jocks raps going into stop sets being 10 dB louder than the words that follow... they KNOW it's not a locally run program.

-They realize the radio is at the same volume all the time while their CD's aren't.

-Same goes with bad audio processing... they don't know "what", but they sense there's something "wrong" with the sound. They don't know that the Optimod is distorting because the input level is cranked and the AGC's pinned, or that it's rip-sawing because there's +6dB pounding the clippers, they just know it sounds irritating.

A nice, Sundry day to all! :-)

Clear Channel has all but destroyed KFYR. This station was #1 in Bismarck (and most of North Dakota) for as long as anyone can remember. Last book had them down to # 5.

Meyer Broadcasting (local family owners) had them #1 for 75 years. Clear Channel took over in 1998 and they lost over half their market share in just two years.

Draw your own conclusions.

I've just launched a new site for North Carolina radio at NCRadio.Net

The site is very much under construction, but once completed (in about 2-3 month for the technical section, which will have data and coverage maps of EVERY AM and FM station in the state) it will be the most detailed radio guide for the Tarheel State there is!

If you are a North Carolina radio professional, former radio professional, listener or radiogeek, please drop by and post on the NC Radio Message Board, which is the centerpiece of the site.

No, there's a shortage of well paid experienced professional engineers, and the even decently paid concept for tech staff seems to have died too. There are exceptions, but those exceptions also seem to have experienced, qualified, professionals, and others looking to work there IF an opening occurs. Let's see, on call 24 hours a day, low pay, no respect, and you can almost make more money sweeping out a dot com, hmm, that's attention to treating professionals like professionals.

I often hear stations which are supposed to be off air punching thru loud
and clear... seems to happen pretty regular.

> Overmodulation
> Excessive distortion
> Falsifying transmitter logs

There's plenty of these to go around...

> "Tweaking" AM DA's out of spec to reach markets better

This generally occurs where cities have sprawled
into once-rural areas (now affluent suburbs) which now lie in a null and the
lobe sits on a "less than desirable" (read:ghetto) urban area. It's been
happening for a long time... I've seen it done and covered up quite cleverly
by altering values on remote control channels,etc. The only way to really
find this is to check the monitor points and if the engineer is aware of the
situation is DEFINITELY going to cover his butt by either falsifying
maintenance sheets or by denying any knowledge of it altogether ("the
monitor must be out of alignment").

Surely, the lot of radio engineers and station owners out there would never
condone or tolerate such blatant voilations, but evidently there are some
that do it with no haunting thought of an NAL.

I would like to suggest that anyone who has found this site useful in the past, send an email to "Elliott Broadcast Services", informing them of the error in the pattern plots, resulting from the interchange of the X and Y axis data, and asking them to correct the problem. It would also be useful to ask them to restore the RMS pattern value to the plots. I have sent a number of emails to "Elliott Broadcast Services" over the past year or so, trying to bring this problem to their attention, but so far I have received no response from them, not even an acknowledgment of my emails, stating the reason they don't plan to fix it. Perhaps more voices will at least engender some comment from them.

<snip>

I'm not sure of the crime either. It's an animal, for goodness sake. There are a lot more serious problems in this country than killing a boar. Nevermind that this is exactly what this moron of a radio "personality" (and I use that term loosely) probably wants. SFX of a squealing boar on the radio? What the hell is that about, besides trying to get publicity? Of course, that's exactly the same kind of garbage that got Opie and Anthony from Boston to New York. Go figure.

The argument is that large corporations don't, automatically, lead to
inferior operations. The situation that occurred at WHYN could have
happened anywhere in the industry, in any size station. The message
posted appeared to be a knee-jerk reaction, very common here, that
blames consolidation for everything that could possibly happen.

I'll bet any pro in this newsgroup can remember something like it
happening to them long before consolidation.

Rich

I actually remember the last two b&w shows on NBC - the first season of "I Dream of Jeanne" was in b&w, and there was also some show with a military theme (very forgettable) that COULDN'T be in color because they blended old WW2 military footage into the series, IIRC.

But my point was that while NBC went headstrong with color programming -- and there were a great many shows in color in the 1950s and early 1960s on NBC while the other two networks hung back.

While "real" engineers take personal pride in their station's sound, is
does seem to be less and less appreciated on AM. The station owner's
have part time contract engineers, with limited budgets, caring
primarily about just being technically on the air and the the bottom
line financial picture. It is sad. With some of the signals heard on
the air today, mushy audio, splatter and all, it amazes me :(

Regarding the project you have set before you, I agree with Mr. Neutron regarding local control and content. I believe this is an issue you can develop that would really touch the reader.

Over the past few decades, annonymity has become the nature of local broadcasts. For the most part everything is canned, coming down from the birds. If a local staff exists at all, they can inject at key time points advertising, news and public interest announcements. However, the format generally found is not conducive to those things (news and announcements) and the impromtu "real time" feeling of a local radio station is lost. One begins to suspect there is poor quality in meeting the needs of the listeners and a distance or void begins to exist that takes on the nature of an echo.

For illustration purposes I submit the following.

I live here in upstate New York. The local market demographics is about 150,000 people spread out over a three county area. Every one of the local broadcasters receive their programming off the satellites. Sports, more sports, MOYL, Oldies and some talk. One AM station in particular is a sister to the local UHF TV station. They use a canned oldies format. Their local weather reports are updated every two days. Essentially they loop the report without any updates and by the end of the second day one begins to tire of hearing the weather conditions and forecast from almost 2 days ago. Considering we have just been experiencing a huge Nor'Eastener does this really serve the public convenience and neccessity and add quality? This broadcaster conducts its business within the relaxed confines of de-regulation.

A local MOYL (Music of your life) gives the time in increments of "after the hour." Not for example: 20 minutes past nine, but 20 minutes past the hour. This is because its a canned program beaming down into many time zones. Again this may seem like a small thing but it is an example of a station alienating itself from local control and content. It can be felt, you know.

Several weeks ago we had a very significant local news event which went nationwide. It was related to the young man who went to the local high school with a satchel full of bombs and guns. Believe it or not, I found this out while streaming on the internet. When I checked out my local radio stations, not one of them had a report generated locally. We were dependent upon satellite network sound bite updates which were nothing more then headlines but for the locals, we were left wondering what is going on????

Those are just a few examples. This does beg the question as to why is it so?

1.) One can find those answers in the way Congress and the FCC have re-regulated the airwaves over the years. The trend is to allow consolidation by holding companies, thereby eliminating local ownership and responsibility to the immediate public at hand. Such relinquishment leads to batch programming. 2.) The allowing of the definitions of what the "public convenience and necessity" is, to be altered so as to introduce a new form of economic relationships relative to operating a broadcast station in a more minimal way, favors big media companies and gives short shrift to the intended local market. This becomes their mandate. What benefit would a big media company have in developing focal points in the listener base when with one wide sweep of the brush can treat all the same and not have to make that investment (a statement not a question). They invariably always take the easy route. Of course causation is not limited to these 2 things but the net effect has a steam roller affect upon how the licensees perfect their businesses in a general way across many time zones and they do not have to account for local identification and listener involvement. Vis a vis, the personal touch.

The by-products of technology today, wherein one can stream off the internet or soon, to download radio off the birds may be construed as progress. I can't help but think these markets are being created by the failure of big media companies failing to keep the interests of the listeners in the small markets who turn to them for keeeping in touch with their immediate environment. Therefore a form of alienation is created and a loss of identity results and annonymity sets in. What was once a very effective form of local communication has been lost and to paraphrase a Bruce Springsteen song from a few years back referring to cable television "75 channels and nothing to watch." Thus radio has been becoming so. The local station should reflect "US" and not be a plain vanilla, generic treatment of nebulous nonsense created to quell the masses in between commercials.

Perhaps in your report you can stress how fortunate the listeners are if they have programming that has real people from the community presenting it and if the station itself seeks to maintain its identity with the community though actively involving itself in this pursuit. The Global Village should not take the place of or take away the rights of people to have true local programming. For such to happen is a true paradigm shift and a loss of identity. Communication is connectedness to one another at a local level, an intimate level. Radio in the past has been an effective mediator of same but now that role has been changing and in the opinion of this writer, is a bad thing.

I have sent a number of emails to "Elliott Broadcast Services" over the past year or so, trying to bring this problem to their attention, but so far I have received no response from them, not even an acknowledgment of my emails, stating the reason they don't plan to fix it.
>>

When I pointed out the microvolt/millivolt muck-up, I got the same response.

The use of rectangular coordinates in the present incarnation is particularly amusing as the data is clearly intended to be presented in polar coordinates.

The page formatting has also changed.

For patterns produced by 6 towers or less, you used to be able to print "2-up" and get all data, including the pattern plot on a single page.

Now, the license data and the tower parameter data and the pattern plot (and, presumably the city map too) are spread across separate pages, requiring at least three pages to print.

> Or directly via the EPG.

Some may use the EPG some not. You may even get some German chs via 'add channels' also. UK Gold text says:-

EUROBIRD, which arrived at the European
Spaceport in Kourou on January 25, has
had its launch date revised by Ariane.

The launch will now take place on
March 8.

EUROBIRD's coverage includes the UK
with broadcasters such as BSkyB and
UPC already signed up. In Germany
EUROBIRD will serve VSAT networks as
well as delivery of TV channels to
cable head ends.

The delayed launch of EUROBIRD is now
set for March 8, previously March 2.

The delay, according to Arianespace,
was "In order to perform complementary
checks" on the Ariane 5 launch vehicle.

Arianespace Flight 140, carrying
EUROBIRD and the BSAT-2a satellites,
now has a revised launch window
starting at 10:51 pm through to 11:47
pm GMT.

The event will be videostreamed on
EUTELSAT's website www.eutelsat.com

May I suggest that a distributed mailing list or website is an entirely different situation than that of Sullivan vs. NY Times. There is no government activity and I note that the NYTimes to this day, still only publishes what it wants, and not what some government official says it may publish or not publish.

You're going to have a hard time convincing anyone that a mailing list or website being shut down by the owner or operator is the equivalent of government censorship or government action. Whether or not your opinion is correct, you can't force anyone to give you a forum to make your opinions known, and that's what you seem to be demanding.

May I note that there are ways to keep tubes "hot" as you put it without
actually broadcasting a detectable signal. It also lowers either the power
bill or the cost of generating said power for the broadcaster.

>from the amateur service.

It was probably more like some hams got upset and bothered the FCC constantly
about the practice. There also might have been fear from a few broadcasters
that they would lose their audience if hams could "broadcast", but that's
speculation. The FCC rarely moves on amateur matters without pressure of one
sort or another. Now if only broadcasters could convince them to actually set
real standards for things like HDTV.

Of course we can!

I had the first top-40 station in Quito, Ecuador, in the 60's and it was similar to all the classic stations in the format at the time, including some night hours with over 80 shares. We prided ourselves on having the best equipment available. Except...

A piece of molding came loose on one of the walls, exposing the wiring to the studio speakers. The wires, which had a bit of slack to accommodate any eventual earthquake movements, slipped over the door frame and, one evening, the connection was severed. The jock, of course, could not hear the air monitor and thought he was off the air. Instead of following written procedure which was to roll music so the CE could troubleshoot, he did nothing. and left the station with no audio for over an hour! If he had rolled music, something would have been on the air, even if he could not hear it!

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

"Convoy"--it was gone in 13 weeks.

The absolute last NBC show in black-and-white was the daytime game show "Concentration," which switched to color in 1966. Even though the show was a network in-house production, Norm Blumenthal, the show's producer, was used to autonomy and was firmly against going to color. It was only when the network threatened to cancel the show if he didn't go to color that he finally agreed.

Blumenthal seemed to like keeping the show almost exactly the same--he kept the cardboardy sets and live organ music way after they should've been discarded, and when hard-charging Lin Bolen took over as daytime programming chief at NBC in 1972, he probably figured his days were numbered. They were. "Concentration" ended its almost 15-year original network run in March 1973.

Published in the March 2001 issue of the Silicon Alley Reporter
Farewell to Radio
by Robert W. McChesney

Radio is the quintessential people's medium. It is the least expensive medium to produce a quality product and the least expensive medium to receive. It is ideally suited to local, decentralized content and popular participation in production. Due to low production costs, radio is also ideal for creative innovation. Nor does it does not require any technical expertise or even literacy to use radio effectively. Even in the Age of the Internet, by all accounts good old radio is going to be around for a long time still, at least as long as there are automobiles. And in places like Africa and parts of Asia, radio will be the dominant medium for another generation.

In the United States, however, radio is anything but the people's medium. It is the private preserve of a small number of billionaires who are falling all over themselves to better serve the needs of Madison Avenue. I do not wish to romanticize the nature of U.S. radio broadcasting from bygone days, but the fact is that the present day radio is nothing short of pathetic.

The reason is clear. There are only a few dozen radio channels in a given community. In 1996 the Telecommunications Act greatly revised the rules for radio station ownership. Back in the 70s and 80s, firms could only own around a dozen stations nationwide and no more than two in a single market. The 1996 law, rammed though by the powerful corporate radio lobby without a shred of debate or media coverage, eliminated any restriction on the number of stations a firm could own nationally, and raised the limit in a single market to eight, in the largest communities.

Since the law passed, there has been a complete reformation of U.S radio, with well over half the 11,000 commercial station changing hands. Small station groups can not compete with the giant chains so they sell out. Radio is now dominated by a small handful of firms that own hundreds of stations each. Every market is now dominated by two or three firms that are "maxed out" with eight stations each. The quality of radio has plummeted. With little competition, the amount of advertising is up to 18 minutes per hour, according to one industry trade publication, well over the figure for a decade ago. Also, localized news and production has been dropped for vastly less expensive standardized fare. You could be blindfolded and airdropped into Louisiana, Oregon or Vermont and probably hear the same oldies song or Rush Limbaugh show on the local radio.

Clear Channel, which owns around 800 stations, has shined the light on the new world order of corporate radio. It usually houses all eight stations it owns in a given community on one floor of a building. Each "station" gets one room about the size of a closet where it can transmit standardized fare. The remaining office space is mostly for the ad salespeople.

In other industries, like computers or automobiles, there might be arguments that having fewer owners is necessary for economies of scale that will eventually translate into product innovation and lower prices for consumers. No such claims can be made in radio. All the advantages accrue to the owners, none to the public. The stations now cost a fortune, not because the cost of production is high, but because stations are worth so much as part of these massive radio chains. It is a rip-off, pure and simple. And the rip-off has nothing to do with free markets; it is entirely due to a corrupt change in the law regulating the publicly owned radio spectrum.

The rational solution would be to only allow one station per owner, period. The cost of stations would plummet, while the quality and diversity and local orientation would skyrocket. Everyone would benefit except the radio-owning billionaires who currently floss their teeth with politicians' underpants. So don't hold your breath expecting any policies to improve matters.

In fact, the radio monopolists have won two incredible anti-democratic victories in the recent past. First, the FCC enacted a very cautious plan to permit low-power FM radio broadcasting in the open slots on the dial in 2000. This would have permitted a handful of noncommercial locally run stations, that cost only $2,000 using new technology to transmit a great signal, into every market. But the radio giants used their leverage on Capital Hill to get a rider effectively killing "microradio" attached to a budget bill Clinton could not veto. The last thing the radio giants want is genuine competition for "their" listeners.

Second, radio is in the process of being converted from analog to digital. With the transfer to digital, it would be fairly easy to add another 30-50 radio stations in every market. But the corporate radio bosses don't want any competition, so that won't happen. Under pressure from the radio kingpins, the FCC is going to permit digital radio to remain as is, except for the technical changeover, and be the private plaything of the same wonderful radio giants who are presently carpetbombing the nation with stale content and tons of commercials. The radio giants promise us that with digital radio, "the change will be so simple, most listeners won't notice any difference at all."

Wow, that sure is good news, eh?

I'm surprised you have to shut down other stations to get a bearing
on an off-frequency signal. The heterodyne disappears when you
null the off-frequency signal no matter how many other stations
are there.

You null the audio, not the RF, in other words.

I think you might be right... possibly because you gave them the "proof"
when they figured no one would.

I personally don't drive around with FSM's or spectrum anayzers or anything,
but my ears can pick up things that tell me things aren't right. Things like
hearing an AM station 75 miles away that's supposed to be signed off coming
in like it's in town, hearing FM stations splattering the dial for 3 MHz and
hearing AM stations blasting into areas that used to be nulls amongst other
things.

I figure if I can hear it, something's up. It's not my job to police the
broadcasters, the FCC is supposed to be taking care of that. I have better
things to do than call radio stations, try to reach the engineer and ask

him/her if they're blatantly violating their license specs!

But I will say that radio has become so cutthroat nowdays that I believe a good amount of station management wouldn't think twice about doing it if it helps the precious bottom line. This kind of stuff has been common ever since radio the pioneer days of radio.

To insinuate that all broadcasters today are so squeaky clean that they would never think of breaking regs for their own benefit is simply ludicrous. It's happened in the past, it is occurring now and it will continue. With business in general becoming more unscrupulous all the time, what makes anyone think otherwise?

< snipped because I'm not sure what the copyright situation is >

I think Robert W. McChesney needs to be a bit more circumspect.

First, which is worse: "billionaire conglomerates" or "big government" trying to regulate creativity? Those are the alternatives. The creativity you saw before is now becoming old hat. As with all technologies this old, once it matures it becomes routine.

For example: how many people still go out for a "sunday drive" with no particular destination in mind? By percentage, A lot fewer than in the 1950's! Driving is routine. So is radio.

Second, if radio starts "going down hill" which I take to mean losing audience, advertising dollars will find other places to go and these billionaires are going to have to settle for being millionaires. I don't think that will go over too well.

Third, what is a "community" these days? Once upon a time, you actually could tell the difference between the cultures of various cities. With or without radio, that is vanishing. We are traveling more than ever before, we are making more and more long distance calls than ever before.

The days when the culture actually was so narrow as to require a "narrow-cast" for a particular geographical community are disappearing fast. You're more likely to find similar subcultures in various cities across the country. So why shouldn't a large company re-use programming aimed at those subcultures?

Don't get me wrong, I think the idea of local content is interesting. I also think it is nice to see fresh formats and perspectives. I don't expect that from the big media conglomerates. At the same time, I don't see how anyone could regulate the airwaves to encourage such creativity.

Radio programming has changed. Yes, it's true, it's about as interesting to listen to as it is to drive down an interstate highway. People with any sort of curiosity will have to find another outlet for their amusement --something like the Internet...

In broadcasting this is true. But keep in mind that some stations with full time engineers sound bad too. Real bad!

> No, there's a shortage of well paid experienced professional engineers,

Once again, in broadcasting, this is true. "Well paid" is but one key factor here... But here's a few more examples of reasons why engineers are bailing out of radio and becoming harder to find:

The staff engineer is expected to keep ten transmitters in five different counties running 24/7, with no assistant, often using his own vehicle and equipment. He's expected to add any new properties to that list as well and expect no increase in pay.

He is expected to maintain every computer at six different buildings in six different cities, even the crashes caused by some yahoos trying to run Quake over the station network.

He is expected to drive 45 miles at 3:30 on Sunday morning when the 500w AM shuts down, all the while getting screamed at by an idiot board op for not getting there quicker, to arrive and discover the smoldering remains of a rodent inside the transmitter.

He's expected to have to fight the bean counters for a parts budget which still includes expensive tubes because the same bean counters have decided not to replace the BC1H with newer transmitters. He's then expected to try to explain to said bean counters why he needs "new" tubes every four months when they'll always insist he can simply "continue to use the same tubes we just purchased last Fall" due to their total cluelessness of radio.

According to the program director, "he's the problem with the airsound" at each station. However, he's expected to watch a grossly overpaid "processing consultant" come in regularly to tweak these "problem" audio chains which he is fully capable of doing himself, just because the OM says so.

He's expected to constantly defend his position of full-time engineer to the bean counters against the onslaught of threats to "switch to contract

services" to increase the profit margin.

He's expected to tolerate all of the above and numerous other manners of vocal and situational disrespect while someone testing prototype circuits in a nice, modern lab down the street receives twice the pay, has full benefits and experiences less than half the stress!

Does this perhaps shine some light on the situation? Is it easier to understand now why "qualified engineers" aren't jamming mailboxes with resumes?

I've been trying to find some info about DAB - as I'm thinking of buying the Psion Wavefinder PC DAB tuner.

All I could find on the BBC website were the specs for broadcasts via the Astra satellite. For this the quality is claimed to be mpeg2 @192 kbps, - not sure though how this relates to digital CD quality audio, but if they use the Fraunhofer codec I doubt it is 100 per cent equivalent.

I'd be interested to learn what coding the BBC use for terrestial DAB - perhaps a lossless compression format ?

Appreciate pointers to any websites with comprehensive specs for DAB.

I believe there is a 13 or 15 tower array somewhere in Canada???
I was told that so don't quote me on it :)

> And... now that WOWO is a Class B, and has no secondary protection, couldn't
> KJOI get authorization to relax the pattern to the NE?
> It seems to me KEX is the only dominant station on 1190 with secondary
> coverage protection.

Yes, WOWO's downgrade may allow some changes...there are still
Canadian issues to deal with, plus a 250w DA in AZ I think along
with an 1190 in KS (I think formerly KAYG?) to protect..
KEX is owned by Clear Channel so that's not an interference issue
(since the FCC would allow the licensees to agree to any mutual
interference...and with CC eventually owning both..... ;)

BTW 1190 is still under LMA right now....When CC finishes the buy,
the calll will change to KTRA-AM (a CC FM in New Mexico currently
has the call...not sure if they will just modify it to KTRA-FM
or change the call altogether)

> by Robert W. McChesney

A lot of people INSIST that more people are listening to radio now than ever before. With the population increasing as it has, it's probably true. But I am seeing just the opposite when it comes to the "real people" I know.

I've been watching the changes in broadcasting and noting the effects on the people who listen. What I've noticed is that the majority of these "listeners", which these corporations assume are too stupid to notice ANYTHING, are a lot smarter than the corporations think. They know that there are a precious few dial positions left where the stations haven't digressed into corporate satellite mish mash, where the station is still running as it has been for years. Most of their favorite stations have changed formats many times over and no longer resemble what they were originally like to any degree.

They can tell if they're listening to someone local or if it's canned crap from a satellite. They're noticing that there is no local element to most stations at all. They know that radio is SUPPOSED to be a local thing, but notice that they hear the same formats and announcers when they visit other cities.

The problem boils down to this:

Used to be, someone bought a radio station because they loved radio. They ran it with good local content and made sure the community felt it was "part" of the radio station. The audience was encouraged to take part in local events and remotes, they were encouraged to call the station and ask for a request or just chew the rag for a minute with the on air personality. Stations often gave away tons of free records and paraphenalia at remotes and the audience loved it.

This sort of local element is gone from the vast majority of radio stations now. Jones or some other satellite network feeds the same old generic crap to stations all over the nation. The locally-run live radio station costs more to operate because a staff has to be paid, equipment takes up more space, etc. It is hard to compete against a radio station that consists of a PC and satellite receiver in a closet which runs itself, and costs very little to run. The stations trying to compete locally are being squeezed to death. The competing "properties" owners have all this skewed data to lure the live station's advertisers away with cheap rates for spots on several

stations.

So, now that radio stations are owned as nothing but "properties" by bean counters who don't have the slightest idea of what "good local radio" is, the result is the generic "black and white" radio that clogs up the dial all over the US.

Even the majority of the remaining local live stations have been so overconsulted and tweaked that they're now running 300 song playlists and wondering why TSL is plummeting like a sack of dirt. There were THOUSANDS of songs which charted well over the past 40 years... why is this always cut down the same 300 songs? Because some corporate consultant "says so" and that's about it.

While I know that there are some GOOD consultants out there, why is it the majority seem to have NO experience actually working on air? I sometimes wonder if there is a "You can be a radio consultant with no radio experience" ad campaign running in the Wall Street Journal from the "Acme Consultant Company" or something to produce some of the morons that are "consultants" out there.
I just can't help but wonder, how can they consider what is out there to be "good" in even a deep lapse in mental health?

What happened to quality?

Why do you guys assume that any Howard Stern sound-alike is a "quality" personality? Why does "filth" and "shock" pass for quality programming? Why 300 songs over and over? Why 18 minutes an hour of commercials? They must have no lack of avails nowdays! From the sound of it, if traffic doesn't have an open avail for a client, they create one! What's next, "radio infomercial" blocks? Or, more possibly, a new "All commercials, All the time" format!

Using the World Wide Web as an analogy... in 1995, you could actually surf the WWW and find interesting personal sites and good, solid information. Now, it's 99.9% commercial sites selling something! No wonder the dot coms are going under at record pace! I challenge you to find a good personal page without an ad banner or pop up on it! Go for it!

Did it ever occur to anyone that perhaps people are just PLAIN FED UP with being force-fed advertising 90% of their day? Radio, TV, internet, busses, billboards, cars, trucks, magazines... it's IMPOSSIBLE to go through even ONE SINGLE DAY without being confronted with advertising unless you are camped out in Alaska somewhere, totally disconnected from any type of media.

I believe that advertising has reached it's saturation point. People are fed up. After a day at work being force fed advertisments, what happens? You sit down to dinner and then... TELEMARKETERS!!! The last straw, IMO. I no longer answer any phone call from a number that I don't know (I **USE** caller ID) so they're wasting their time calling our home.

I don't listen to the radio anymore... I despise TV... I'm sick of renting a movie, just to see 4 ads at the start and then seeing all kinds of "sublime"

ads like someone holding a Pepsi, etc... I'm so sick of internet ads and scams, I'm almost ready to just cut the cord there too...

Listen up idiots! I don't buy ANYTHING based upon what the ADS hype up anymore because I've taken the bait just to be disappointed and taken one time too many. For the most part, quality of services and merchandise is at an all time LOW and keeps dropping. it's a fact of life that once we spend our money most companies could care less whether we are happy with what we have.

Bottom line, I believe most people are sick and tired of being "Wall Street fodder" 24 hours a day. ADS! ADS! ADS! Why don't you bean counters SHOVE IT!!

What I see as the main argument against consolidated corporate stations is that they tend to gobble up a lot of once successful stations and run them into the ground when they simply plug them into Jones or whatever. Any idiot with enough money to buy a station can do that. So, the local element has gone by the wayside in a large majority of corporate "plug-ins" and all it amounts to is just another signal on the dial grinding up the same old crap...

Let me ask you, if a suprise tornado was coming into your county, would you expect radio to be alert enough to warn you about it? In my town, I simply WOUND NOT trust local radio to warn me in time. The majority of the stations here are on birds or voicetrackers and I don't trust the staff at the live stations to be alert to things like this.

I simply wouldn't trust my life to the $6 an hour yahoos they've got working there. By the time they notice anything like the EAS squawking in another room over the 60 watts screaming out of the air monitor, then call their boss, who calls his boss, when they finally figured out what to do about it, the storm would be in the next county, the damage done and lives lost. That is simply how it is at most radio stations anymore because there is no local element!

There's no local 'All News" station here, because they'd have to spend too much money to maintain decent return with that format, so it's all voicetracked "Country" this, satellite "Talkradio" that and computerized "Mix" this. That's the problem, in a nutshell. The "Mix" format here is the "Mix" format in Tampa, is the "Mix" format in Fresno, just different Legal ID's inserted at the top of the hour.

If the local talker's computer froze and there's no audible alarm, I'd bet it would be in dead air for at least a good ten minutes before anyone bird-setting over at the "Mix" closet noticed. I've seen it over and over. Ops are only at the talker when they air something like Nascar or Pistons and when it's over, they hit "AUTO" and leave.

The point is, bad radio always has and always will happen and its true that it isn't just at " Big corporate" stations. In twenty years of radio, I'd be lying if I said I've never had dead air or screw-ups on my live shifts before... as the saying goes, "sh*t happens!" But it happens an awful lot more on these "plug-in stations" than anywhere else.

BTW, I still to this day have a recurring nightmare that I'm on-air and all the carts in the studio mysteriously vanish into thin air, leaving me nothing to play! I just realized that in today's state of radio, it's no longer just a nightmare but a reality with a grand probability of that happening on air!

A sad but commonly true scenario.

What amazes me, there's a 500w AM not far from here. There audio is the muddiest around, but the highs splatter 2 channels each way. Now, as I worked there years ago, I know they at least "WERE" NRSC-2 compliant when I was there. They had a decent board (I installed a Wheatstone after pulling an old tube type Gates Yard), CD and LP to air for music, the cart machines left a lot desired, but I put new heads and caps in them when I was there. They had a DAP 310 and Innovonics NRSC feeding a new Nautel 1kW transmitter. They were loud and crisp as anything I've ever heard. But the signal is so muddy now and sounds as if the board is simply feeding the NRSC box direct. But the highs crashes *at least* 20 kHz each way and practically NO highs whatsoever in the signal... something's not kosher around there....

True... Most stations used to just leave the filaments turned on... TV was
always strange in how it handled downtime....

> happen.
> 'Scuse my rant.

A rant shared by yours truly. We had a really good oldies station (a legend
really) called Honey Radio that played a lot of 50's and 60's songs the
consultants would have a stroke just hearing... lots of doo-wop stuff. But
it's long gone now.

But these consultants seem to think we all want the same 300 oldies
repeatedly...

Speaking of Neil Sedaka... notice that they never play "The Immigrant"
anymore, just "Diana", "Happy Birthday Sweet 16" and "Calendar Girl" three
times every day... gag!

For the most part, oldies format is more than "played out", IMO.

Most TV stations have something like "Lydia' inline which can be set to
automagically put up the station ID every 20 minutes without any human
intervention whatsoever.

If only we could automagically have our morning coffee ready when we get up!
Someting always seems to go wrong with programmable coffee makers... perhaps
they are programmed by Micro$oft! :-)

Rumour has it that a IRR FM station are deriving their DAB feed for the
regional mux from the FM off-air signal.
Don't know if it's true, and can't remember which station it is either.
But BBC stations sound excellent.
Planet Rock, etc, suffer at the hands of 'sloshy' sound at times. Down to
bitrate restrictions I imagine.

There are some Cleveland Clear Channel stations that I would expect to do
this. WTAM, of course, because they're the primary EAS station. WMJI-FM is
pretty good too.

None of the Infinity, Salem or Radio One outlets do EAS, as far as I know,
though I could be wrong.

Actually, Michigan Radio, the U of M's big chain of stations, recently dumped their classical music format ad went to an All Talk format consisting of typical NPR rag-chewing drivel.

I liked their selection of music as it was broader than MSU's WKAR-FM in East Lansing. You were likely to hear anything from the Classics to newer stuff like a Tim Story, Enigma, etc.

Detroit had lost it's classical station in 1999, IIRC.

Flint lost WFBE-FM (run by the Flint Community Schools) to Citadel and is now a country format.

Here's an interesting turn... 96.9, WSTD-FM (I've suggested they change calls 10 years ago!) in the small town of Standish, MI, recently went dark due to the fact they couldn't pay the bills. Rather than selling it , the owner DONATED the station (studios, transmitter, commercial license allocation and all) to Central Michigan University!

There are so many sources for Mr. or Miss Music Fan, I don't know why anybody even bothers with the radio anymore. Radio still programs like it's 1975. My local fm station has a well known syndicated show on in the evening, her idea of an inspirational song is to play "That' What Friends Are For". No really a bad song, but certainly a tired oldie. A DJ should be a musical expert, and with such a vast pool of music at their fingertips, should be able come up with some songs that the average listener doesn't automatically think of. Unfortunately I think a lot of average listeners know more about music the the folks at the radio stations. Recently I heard a DJ say Debbie Gibson was popular in the late 70's. That's pretty bad.

[Moderator's Note: Is the "well-known" evening proggie Delilah?]

AFAIK, WCBS(AM) is still a National Primary, and WCBS-FM is still a Local Primary...the same two stations responsible for blowing a hurricane warning some years back, by running the EBS alert signal from cart on the AM and ignoring the alert altogether on FM.

After three years (and some change) on the air at public radio station KDHX, 88.1 FM in St. Louis, Stage Left - a lively and eclectic mix of music, comedy, and spoken word from stage and screen - has left the airwaves and moved to the Internet! Listen at your leisure at http://www.stageleft.org with RealPlayer.

Hosted by Amy Ruprecht-Belt and St. Louis radio veteran Chuck Lavazzi, Stage Left is not your father's (or your mother's, probably) theatre music show. Stage Left examines a variety of themes by pulling together music and spoken-word material from the worlds of stage, film, television, cabaret, and radio
theatre.

New episodes (along with the play lists) are posted every Wednesday at www.stageleft.org. Tune in and hear theatre and film music from a whole new angle!

Our first Internet episode: "Black Light" - a (belated) Black History Month program, featuring music by black composers and songwriters from the early decades of the 20th century, including Eubie Blake, "Fats" Waller, Scott Joplin and James P. Johnson.

Stage Left is produced at the Magnolia Avenue studios of KDHX, 88.1 FM in St. Louis (www.kdhx.org)

Which is why I tell programmers that music isn't their primary
product--entertainment is. If all radio offers is music, there are
plenty of other places to get it.

I saw an item on the AP wire the other day, concerning an apparent
trend for public radio stations nationwide to drop classical music.
According to the story, with one or two notable exceptions there's
been little or no listener protest. The talk programming apparently
is more widely accepted by audiences, and brings in more donations.

I was thinking about this today while listening to our local NPR
affiliate, (actually a repeater of a Fresno station) which still plays
classical music outside of drive times, albeit a generally "safe"
repertoire of familiar warhorses.

That's not unprecedented. In recent years several AM's have been
donated to universities. A long time ago a company for which I once
worked donated a TV station to Ball State University in Muncie, IN.

Well said, Mr. Neutron! This is one of the best examples of a "rant" that I have read for a long time. It's emotional, builds well, and the facts hit home like nothing else. Like this poster, I know there is a lot of market research garbage out there that consultants are feeding to both Madison Avenue and the corporate radio community. However, "real life experience", in my case too, says otherwise. I have experience working in radio too, and what J. Neutron says about satellite radio and spot slot availability is also right on the money.

In many ways, though, he is just preaching to the choir. My hope is that there are interested members of the general public that might be reading this, and the next time a market researcher calls, or the next time they have the opportunity to meet someone in local radio management, they will speak up. They will tell that person that they too are sick and tired. Radio stations have email and telephones. So do TV stations. They also claim to care about public feedback. Well perhaps they are not getting enough of it.

When WCKW here in New Orleans made their move from AOR to the "80s and More" programmed crap and fired all their air talent, I fired off an email to their PD. I hope others did too. My action probably made no difference, but he did write back and explain what the parent company felt where the economic realities behind the change. He told me that he too was saddened by the switch because he liked the station as it was, and he didn't agree with the parent company's reasoning, either. Maybe I'm just whistling in the wind, but I hope he had the cajones to say something to the boys upstairs. Maybe it will make some difference if more of us do things like that.

All of that said, I am not holding my breath, either. Johnny Neutron, thanks for the very entertaining (and unfortunately on-target) rant.

Larry Pritchard

Very good point! However, I do a lot of research on my local radio stations and know the time to tune in. It is amazing... even if it is only for a 15 minute program I have it on a cheat sheet so I don't forget.

My friends razz me about having a "TV Guide" for radio. They just don't understand the plight of us radio heads!

I was going to write this off as another "print media" bash of radio, but several of the points are worth opening a discussion, debate or rant.

"Mark Dawkins" <dawk@shell1.aracnet.com> wrote in message news:wOup6.5816$a3.13277@typhoon.aracnet.com...
>
> Published in the March 2001 issue of the Silicon Alley Reporter

> Radio is the quintessential people's medium. It is the least expensive
> medium to produce a quality product and the least expensive medium to
> receive. It is ideally suited to local, decentralized content and
> popular participation in production.

Radio is also an ideal medium for the distribution of national fare that has broad appeal. Localism is important, but quality and entertainment value are even more important.

In an effort to promote localism, we saw the breakdown of the clear channels in the 70's with hundreds and hundreds of new AM stations added to the band. we than witnessed the change of the arbitrary AM power stages (250 watts, 500 watts, 1 kw, 5 kw, 10 kw, 25 kw and 50 kw) allowing many new stations with "odd" power outputs. Then came Docket 80-90 which dropped over a thousand more FM stations into mostly small or medium markets.

The end result is a level of competition in many smaller markets that makes local live programming cost-prohibitive. Example: Traverse City, MI, with less than 30 thousand population, had 4 local signals in 1970. It now has nearly 20 stations putting a city grade over the market. Another: Lake City, FL, had 3 signals in 1985. It now has 6.

Satellite distribution of programs became economically viable long before consolidation. Station owners began taking national formats and programs to improve the competitiveness of their stations in reaction to greater competition. And by doing so, they were doing nothing so new that it had not been done in the first 40-some years of radio, when the national network was king and stations without network fare did poorly in revenues and ratings.

> Due to low production costs,
> radio is also ideal for creative innovation.

Stations in Flagstaff, Ishpeming or Calais don't do this, and never did. Creative local production was, and is, generally limited to larger stations in larger markets and to noncommercial stations that have the benefit of volunteer or dedicated staffers who are motivated by something other than

their paychecks.

>Nor does it does not

> there are automobiles. And in places like Africa and parts of Asia,
> radio will be the dominant medium for another generation.

Again, the common misconception that most radio listening is done in the car. Actually, only about 30% of radio listening time is in-car.

>
> In the United States, however, radio is anything but the people's
> medium. It is the private preserve of a small number of billionaires
> who are falling all over themselves to better serve the needs of
> Madison Avenue.

This is a real cart-before-the-horse statement. Madison Avenue (where few agencies are located today) does not drive programming any more than the needs of advertisers did decades ago. Advertisers, whether direct accounts or local or national agencies, buy ads on stations that have listeners in a quality (age, sex, etc.) and quantity that make the ad rates competitive. Radio stations, whether single owner or group owned, try to get the largest number of listeners in appealing demographic groups. Radio is an ad medium to the advertiser, and entertainment to the end user.

The argument about the "billionaire" owners seems neat and effective. In fact, there are few billionaire owners as most of the radio and media companies are majority owned by shareholders ranging from you and I to mutual funds, retirement plans and insurance companies. Interestingly, where the most consolidation can be seen is in the field of local newspapers. Few markets have more than one owner and one major daily paper. Why is this acceptable for newspapers and not acceptable for radio, particularly when there are dozens of stations in most major markets? I'd say that the pot is calling the kettle black in this case.

> I do not wish to romanticize the nature of U.S. radio
> broadcasting from bygone days, but the fact is that the present day
> radio is nothing short of pathetic.

Yet radio listening is at the same level it was pre-television. 21 average hours a week per American. OK, it is down some from the peak in the late 80's, but we have everything from video games that are truly realistic to the net and satellite TV competing for peoples leisure hours and all at a time when it is reported that Americans are working more weekly hours than any time since the early 40's.

It would have helped if the writer had described some instances that forced him to call the whole medium "pathetic."

>
> The reason is clear. There are only a few dozen radio channels in a

> eliminated any restriction on the number of stations a firm could own
> nationally, and raised the limit in a single market to eight, in the
> largest communities.

This is your basic anti-business ploy. The fact is that it was not the radio lobby but communications interests in general that used the deregulation of the 80's to increase ownership limits. The US was, at the time, one of only a few countries with commercial broadcasting on a major scale that had such limits and, as such, was an anomaly.

One of the benefits from consolidation is that radio companies can now go to the stock market for capital, and on the employee side, can afford benefits packages for staff. When the 7/7/7 rule was in effect, very few of us who worked in broadcasting got such niceties as insurance, retirement plans, or even much of a chance to grow upwards in the same company.
>
> Since the law passed, there has been a complete reformation of U.S
> radio, with well over half the 11,000 commercial station changing
> hands.

A significant percentage of stations changed hands every year before deregulation. And to say that nearly 6000 have been a part of deregulation sales is exaggeration. Most small market stations have not been sold. And there are more stations in the hands of small groups of 10 or less stations than there are in the hands of the big handful of groups.

>Small station groups can not compete with the giant chains so
> they sell out.

I see plenty of smaller groups, like Emmis, HBC and others, competing very nicely in big markets. I also see plenty of owners who built stations in the 50's and 60's cashing in partly due to the money and partly due to the fact that they are now past retirement age. The reasons are not as simple as we would be asked to believe.

>Radio is now dominated by a small handful of firms that
> own hundreds of stations each.

A bit of an exaggeration.

>Every market is now dominated by two or
> three firms that are "maxed out" with eight stations each. The quality
> of radio has plummeted.

It would be fair to have some examples for credibility. Otherwise, there is nothing different from this article and the "no one plays real rock music anymore" rants so common these days.

> With little competition, the amount of
> advertising is up to 18 minutes per hour, according to one industry
> trade publication, well over the figure for a decade ago.

Commercial loads have increased, They tend to do so in up business cycles when rates grow more slowly than demand. Most music stations in major markets are not at 18 minutes. And if they are, the stations become vulnerable and often dive off the radar.

>Also,
> localized news and production has been dropped for vastly less
> expensive standardized fare.

More stations cause more fragmentation of revenues. This brings in the option of a single news department for several stations. Often the benefit is real news coverage for the non-news stations. I remember an independent, major market station in the 70's that did their news out of the National Enquirer and the daily paper because they could not afford a news staff. If you look back, you see that the past was not as golden as it seems.

>You could be blindfolded and airdropped
> into Louisiana, Oregon or Vermont and probably hear the same oldies
> song or Rush Limbaugh show on the local radio.

Yes. Very true and very correct. Rush is a national talent. Would this same writer suggest that Jay Leno should be dumped in favor of a local Tonight Show host in Shreveport? Really!

And, the US has always had fairly national music tastes. Of course an oldies station in one market is going to play very close to the same songs as the station across the continent. Otherwise, we would have to conclude that the Beatles and the Supremes were not national hit artists... This argument is simply dumb.
>
> Clear Channel, which owns around 800 stations, has shined the light on
> the new world order of corporate radio. It usually houses all eight
> stations it owns in a given community on one floor of a building. Each
> "station" gets one room about the size of a closet where it can
> transmit standardized fare. The remaining office space is mostly for
> the ad salespeople.

Radio is an ad medium. Most stations have nicer facilities today than they did a few decades ago, due to digital gear, better studio design and the ability to centralize a lot of technical operations in one building. I operated a cluster of 9 stations in a single market in the 60's and had the nicest studios, best equipment and best working conditions in the market. Consolidation itself is not bad, just different.
>
> In other industries, like computers or automobiles, there might be

> chains. It is a rip-off, pure and simple. And the rip-off has nothing
> to do with free markets; it is entirely due to a corrupt change in the
> law regulating the publicly owned radio spectrum.

Conjecture. A national show, or one distributed nationally to all the similarly formatted stations in a group, does represent economies. Colocating all FMs on a single tower is an economy. Centralizing offices and internal functions does produce economy. There is plenty of empirical evidence to this end.

The "public airwaves" argument is getting stale. The government regulates the airwaves, but is not the "good production" police. The writer does not remember how many awful stations there were in the 50's and 60's because we tend to remember the WABC's and not the ill-run, mismanaged small business conglomeration that radio was in large part in that era.

>
> The rational solution would be to only allow one station per owner,

> diversity and local orientation would skyrocket. Everyone would
> benefit except the radio-owning billionaires who currently floss their
> teeth with politicians' underpants. So don't hold your breath
> expecting any policies to improve matters.

And employees would no longer have benefits, health plans or security. And listeners would not benefit from going back to the cottage industry that was radio in its inception.
>
> In fact, the radio monopolists have won two incredible anti-democratic

> locally run stations, that cost only $2,000 using new technology to
> transmit a great signal, into every market.

And screw the 3rd adjacent channel protection to existing stations.

Those $2000 stations could not exist. It would cost many times that to put a legitimate 100 watt LPFM on the air, ranging form legal fees to decent equipment and permits and licenses and zoning. And 100 watts does not cover anything but the smallest market. Great signals? Nope.

>

> The radio giants promise us that with digital radio, "the change will
> be so simple, most listeners won't notice any difference at all."
>

The issue here is whether to move to a whole new band (Canada is dong this, to no great impact, a la HDTV) or to superimpose an analog compatible digital signal on existing facilities. This is a whole different subject for debate, as it involves technology and spectrum management along with realizing that existing broadcasters have a certain right to consideration in any new proceedings.

Actually, there aren't a lot of other sources of exposure to new music, and
there aren't likely to be soon either. Presently every station in a large
market must earn money one way or another. Advertisers want results not praise
from a few radio diehards.

Art...

the point is that it was a forum to discuss radio. Evidently, it was a
forum to discuss only *positive* things about Clear Channel and about
Bubba and Steve Duemig. Evidently they feel that they are enough of
deity-like beings to threaten the owner of the boards that negative
opinions about aspects of their shows are not to be allowed. Also I, as
well as others who posted would get nasty e-mails from Bubba and his
producer. Mentioning those e-mails was not allowed as well. Be advised
that in spite of the board owner's denials that Bubba had nothing to do
with the boards being shut down, Bubba was boasting on-air that he got
the boards shut down and would "go after" the negative posters.

And as for Riley's post, I mentioned earlier how I expressed my opinion
about Steve Duemig of WDAE and his blasting fans of non-TB area teams
who live in the TB area and that my post on that board was deleted.

OK, it is a private board, but they should be honest and state that Thou
Shalt Not Demean Any Announcers Who Work For Clear Channel...

Thank you, David, for opening this discussion a little further. It is a breath of fresh air to hear various arguements presented with such foresight. However, I, being from the world you mentioned, have something to add to your comments.

>>The "public airwaves" argument is getting stale. The government regulates the airwaves, but is not the "good production" >>police. The writer does not remember how many awful stations there were in the 50's and 60's because we tend to >>remember the WABC's and not the ill-run, mismanaged small business conglomeration that radio was in large part in that >>era.

Maybe I missed your point on this one, David. If I did, I apologize. Here are my thoughts:

1) The "public airwaves" arguement, as you call it, should NEVER be stale. That is the basis for what makes radio what it is. The day that the arguement for public airwaves grows old is the day radio will cease to exist. Instead, the private sector will COMPLETELY control the PUBLIC airwaves. That was never its intent, and never should be.

2) You better believe there were plenty of awful radio stations in the 50's and 60's. How old was radio then, David? Yep, barely a couple of decades old. Like TV stations of the 70's and 80's, radio stations in the 1950's and 1960's were still experimenting, still trying to figure out their "position" in people's life. And radio stations are still experiementing. The best examples of that will not be found at any of those big conglomerates. They'll be found at the smaller radio stations that still work on the old principles of radio belonging to the public.

Some of this may found hokey to some, David, but for me, it's what makes radio so special: it's one-on-one ability; it's chance to force people to use their imagination; in not enough cases, it's small-town feel.

Because of my feelings toward the "public airwaves," it is my hope and prayer that we in radio NEVER give up the true mission of radio in the beginning: serving the public.

Interesting article, but the author doesn't have all his facts right...for example...

Radio stations have routinely aired 18 minutes (or more) of commercials per hour for decades. This is nothing new. Most FM music stations air considerably less, however.

Clear Channel doesn't own 800 stations...they own 1,100 stations. And there aren't 11,000 commercial stations, the number is 10,000.

As for syndicated and network radio, that's nothing new either. The resurgence of daytime syndicated programming is just a return to the way radio was during its so-called "golden age".

Can a local Oregon or Vermont host really do a better job than a national radio star? Listeners seem to prefer quality national talent to local (and less talented) performers.

I don't recall anyone complaining about the loss of localism when Garrison Keillor's Prairie Home Companion became big via NPR in the 80s. But when it comes to Limbaugh's current success in radio, well that's a sure sign that radio is sinking fast. Right.

As far as evil monopolists, billionaire business cabals, corrupt politicians, etc....radio will soon have new competition
thanks to XM and Sirius satellite radio and other new technology. If old-fashioned radio isn't worthy, it will be forced to improve.

Today I did my Saturday AM switching around and wound up monitoring WMAS-AM 1450, Springfield, MA intermittently from 1:55pm to 6:06pm. They are Music of Your Life. During that period of time it was strictly the satellite feed. Dead air during comml. opportunities, 6min. of dead air during the news window at the top of each hour and, of course, no legals. They also operate an FM live personality station in the same building. I realize that a MOYL format on a 1000 watt doesn't have much of an audience, but doesn't anyone spot check....no pun intended.....to insure that their 2 cmmls. air and they are in compliance with FCC requirements? I was tempted to call the FM, but I didn't feel like explaining to the kid who's probably talking to his GF on the other line, that incase nobody ever told him, there's an AM down the hall somewhere behind the boiler. Besides, I want to tune in later to see if anyone did correct the problem.

Oh, Rich Wood, they are owned by Lappin Communications. I believe that they only own one other combo in CT. So, I am not slamming the big boys this time.

There is something that I ocassionaly listen to here in Houston on 740 KTRH.

It's called "When Radio Was"

I **think** it's put out by either ABC or Premier.

It's a show that plays back old radio shows from way back before TVs.

A bit late to the thread; however ....

Radio Station K O O S in Coos Bay, Oregon; although, I believe they have done a call sign shift and KOOS is the FM station and 1230 has another callsign (KHSN?).

Operates on 1230 with a tower "high atop the Hall Building" in the middle of town. The building is "U" shaped with the top of the "U" facing North. The tower is just to the West side of the bottom of the "U" with the radials going out across the roof top. Back, in the 50's, depending on the condition of the radials at any given time, the 250 watts actually made it to the Pacific Ocean beaches a few miles west. The station was on the 5th floor of the building, just below the antenna base. You could do a tower light check by looking out the window behind the console - lights reflected in other windows.

<< 1. Does anyone know of any sources for storytelling programs?
2. Does anyone know of a listing of radio stations that regularly air storytelling programs? >>

Check out This American Life at www.thislife.org

This American Life is one of the best shows on radio today. They do a lot a storytelling on the show and you can listen to archived shows on the website.

Here's how they describe it: "One of the problems with our show from the start has been that whenever we try to describe it in a sentence or two, it sounds awful. It's a bunch of stories -- some are documentaries, some are fiction, some are something else. Each week we choose a theme and invite different writers and performers to contribute items on the theme. This doesn't sound like something we'd want to listen to on the radio -- and it's our show. In the early days of the show, in frustration, we'd sometimes tell public radio program directors that it's basically just like Car Talk. Except just one guy hosting. And no cars.
It's a weekly show. It's an hour. Its mission is to document everyday life in this country. We sometimes think of it as a documentary show for people who normally hate documentaries. A public radio show for people who don't necessarily care for public radio."

I highly recommend the show. The episode on the death of Frank Sinatra is one of my favorites and is on the site.

Scott W

Q: What do you call a disc jockey in a three piece suit?
A: The defendant.

Mark Jeffries <MJeffries@KRW.com> wrote:

"The absolute last NBC show in black-and-white was the daytime game show "Concentration," which switched to color in 1966. Even though the show was a network in-house production, Norm Blumenthal, the show's producer, was used to autonomy and was firmly against going to color. It was only when the network threatened to cancel the show if he didn't go to color that he finally agreed."

ISTR an article in the 1980s in either Video or Video Review that claimed that "Concentration" was done in color early on, for a one-week run as part of an RCA Victor promotion; those episodes were shot in Brooklyn rather than Radio City, and the author claimed that they had a lot of trouble finding a color scheme for the puzzle that would be sufficiently "colorful" to keep RCA happy (just using the existing stage set would not have been enough) while still being readable on B&W sets.

>packages for staff. When the 7/7/7 rule was in effect, very few of us who
>worked in broadcasting got such niceties as insurance, retirement plans, or
>even much of a chance to grow upwards in the same company.

My first job in radio, in 1969, I had company paid heath insurance, and, if I had stayed, a retirement plan, with a local owner.. My second radio job, I had a company paid health insurance plan, and a possible pension. My third radio job, in the mid '70's, I started with a company paid health plan, and a profit sharing plan. The profit plan was discontinued, after deregulation, and the health plan dropped vision, dental, and went to a $1000 deductable per person. In my jobs since 1990, none has paid more then 3/4 of one person for health, and none has any retirement plan.

>Every market is now dominated by two or three firms that are "maxed out" with
eight stations each. The quality of radio has plummeted.
>
>It would be fair to have some examples for credibility.

Palm Springs, California-- in 1992, a partial sample showed

KBZT- local owner one (with its own air staff, and local news)
KUNA local owner two (with its own air staff, and local news)
KPSI AM/FM local owner three (each with its own air staff, one news dept)
KPSL local owner four (with its own air staff, and local news)
KNWZ local owner five (with its own air staff, and local news)
KDES-AM/FM local owner six (with its own air staff and loca news)

KBZT bougth KUNA, and both were then bought out. (dropped news)
KPSI AM/FM bought KDES AM/FM. (combined four stations into one news staff)
KPSL and KNWZ were bought by the same bunch. (combined news)
Six local owners to three. Six news departments to two.

>>You could be blindfolded and airdropped

>
>Yes. Very true and very correct. Rush is a national talent.

How many of the satellite music services are driven by "national talents?" And how many are used because it is cheaper and easier to put up a dish and a comuter then it is to hire an on-air staff?
>

>And, the US has always had fairly national music tastes. Of course an oldies
>station in one market is going to play very close to the same songs as the
>station across the continent. Otherwise, we would have to conclude that the
>Beatles and the Supremes were not national hit artists... This argument is
>simply dumb.

I started in "Top 40," in the era of the "boss jock" copies--everyone tried to sound like KHJ in LA, but they all had to do it with local people. They couldn't just put up a dish and import the same jocks, and the same music. Also, there were many regional hits, and regional bands. "The Boy From New York City" of "Solitary Man" didn't make it in Minneapolis. The "Cryan Shames" (not sure about spelling) had a great following in Chicago, but very little elsewhere. The national charts drove playlists, but so did local sales.
>>
it is entirely due to a corrupt change in the law regulating the publicly owned radio spectrum.
>
>Conjecture.

The rise in satellite services, and the "fall" of local radio programming both came within a few years of "deregulation." The end of requirements for local talent, and EBS readiness led to automated "walk-away" stations, and combined with the end of the fairness doctrine, led to Rush Limbaugh on 600 stations, and thus no local talent getting trained, or paid, on 599.
>
>The "public airwaves" argument is getting stale. The government regulates

True, but at least there was a conglomeration of different stations. Now, how many of can drive through several markets in several hours, and never miss a word from the same oldies channel, or of Rush? (and never hear a word of news?)

>>
>> The rational solution would be to only allow one station per owner,
>> period.

How about the way it was-one AM/one FM? It can be difficult to make a AM daytimer successful, but a AM/FM combo-with different programming, can, and did work.

>>The cost of stations would plummet, while the quality and
>> diversity and local orientation would skyrocket. Everyone would

There would be more owners to provide competition for air talent, and part of that competition would be benefits. Once upon a time, you leave one owner, and have 7 possible stations to go to. Now, you can leave them 8 at a time.

It's a return to the way programming was distributed, not to the way "radio was" during the era of live band broadcasts, highly descriptive news coverage and original drama.

We can celebrate our present digital communications system for its own great virtues without conflating them with the different great virtues of systems past.

Let's see a local owner who can afford to fully cover his employees. Again, radio consolidation is being blamed for the soaring costs of health care.

I'd like to see a graph of health coverage costs over that same time span to see just how difficult it is, especially for small companies, to insure their people.

I really wish life were as simple as it's made out to be here. Consolidation destroyed the world, it seems. When I talk to my medium and small market affiliates they often tell me how difficult it is to operate, whether or not Clear Channel is in the market. Health insurance is terribly expensive, regardless of the size of the company.

However, let's not forget that the same "evil monopolists, billionaire
business cabals" are behind satellite radio. Wallace and Gromit aren't
doing this in the garage.

Message-ID: <taqkf7o9asqa0@corp.supernews.com>
Source record: 15238

I'm exploring music programming and may put on an internet station.

Selector is a bit more than I can afford.

What programmer is not a subscription but one time price and can;

1. separate artists
2. program by gendre, year or at least era,
by personal rating.
3. ability to make music fit into a specific
time segment - like 20 minutes or 53
minutes.
4. If possible I'd also like it to be able to
run my 300 disk changer.

Music Match can do 3 of the 4. What else have you had a good or bad
experience with?

Oldies 105.5 is on the air down in Macon, Georgia, but they don't have much of a signal up in Griffin, about 40 miles north. That was a stupid move, now they don't have a signal at all. Maybe they will lose a lot of listeners.

News Release

3DSJ, Tampa, Florida, has completed testing of its programming and network transmission systems and is preparing to offer an exclusive programming format to radio stations world wide. President & CEO, Bill Elliott, said the popular music format features listener requests and dedications 24 hours a day, 7 days a week. Test programming aired on the company's website, 3DSJ.com, has drawn listener response from the United States and England. Affiliates can carry from 1 to 168 hours each week depending on their needs. Bill Elliott can be reached at 813-920-7102 or digitalradioman@msn.com

From: Herbert Visser <herbert@broadcast.net>
Message-ID: <tar1dp23am545d@corp.supernews.com>
Source record: 15244

The Los Angeles Times writes that ClearChannel wants to sell advertising packages to recordlabels.
The ads would back-announce artists of sponsored songs, and CC will only sell spots to labels if programmers of the
Clear Channel stations would already have deemed the song a hit.
Apparently, this is quite controversial in the United States. Here in Europe we've had payola stations since the 1930's !
It's very normal in Europe to have recordcompanies owning radiostations and even mediaconglomerates.
The giant publishing house and recordcompany Bertelsmann for example (also co-owner of Napster) owns the biggest
European broadcasting conglomerate CLT (owner of the famous RTL radiostations in most European countries , they're
the nr.1 in France, they're giant in Germany, they own Atlantic 252 which is a major station in the UK, etc.).
And such stations have always been around. Why do Americans think that payola on the radio is wrong ? What has been
the reason to be so much against payola ? I think payola is good, and it's a great way to break new artists !

Herbert Visser

> from a satellite.

No, they don't. They push buttons or hit "scan" until they hear the song they like. They don't care if it local or nation, small owner or corporate, Clear Channel or Viacom. There's a certain number of formats out there: news, CHR, UC, AC, soft jazz, country, classic rock and AOR. Every station has to pick one.

People think of radio as a big jukebox. They could care less about the guy on the other side.

It also airs at 11PM mountain time on KSL/1160/Salt Lake City. Should be audible through most of the west.

While reading the weekly Northeast Radio Watch at fybush.com, I often wonder exactly why it is that radio stations bother changing their call signs when they change their slogan/nickname. There aren't too many stations that actually use their call signs except for the legal roughly once an hour, if it's audible at all. So why bother? One example from the Salt Lake City market is the switch at the 107.9 allocation in Roy UT. The station had the calls KSNU from back when they were "Sunny 107.9" running a nostalgia format. They switched a few times before being sold and settling on "Fever 107.9" and changing the calls to KFVR-FM. The thing is, last time I actually heard them the legals were whispered at 100MPH buried in the stopset at about 15 before the hour. So why did they bother? The only thing I can really think of is that the person who actually makes the decision really cares about radio. Other thoughts?

1337. Re: why is payola wrong

Newsgroup: rec.radio.broadcasting
Date: 2001-03-13 23:47:39 UTC
From: David Eduardo <amdavid@pacbell.net>
Message-ID: <tatccreksusndb@corp.supernews.com>
Source record: 15250

Payola, which is a legal term in the USA, is illegal here.

Selling a slice of time to an advertiser is legal, whether the time be used to play a song or to hawk wares or services. This is simply an advertisement.

Payola is defined as causing a record to be played for personal gain without the knowledge of station management. If management knows, it is not payola but simply a violation of sponsor ID rules (read on about that). The money goes to the licensee, not the jock. In this case, the playing of the song is a commercial arrangement with the station. And it is legal as long as somewhere the station says that the play was presented by the sponsor.

So, what is wrong with a jock taking a few bucks to help a song on its nefarious way?

Why a jock's receipt of payola is wrong gets into two areas. First, in the US no advertisement may air without a clear identification of the sponsor. Playing a record for pay without disclosing that such is the case is not legal. When a disk jockey plays a song for direct pay without the knowledge of station management, it is illegal due to the obvious lack of sponsor identification. Additionally, receipt of payola is codified as a criminal act per se. If you think about it, the jock is stealing time on the radio station, getting compensated (bribed), and the owner is not receiving its due.

From www.history-of-rock.com: ""Payola" is a contraction of the words "pay" and"Victrola" (LP record player), and entered the English language via the record business. The first court case involving payola was in 1960. On May 9, Alan Freed was indicted for accepting $2,500 which he claimed was a token of gratitude and did not affect airplay. He paid a small fine and was released. His career faltered and in 1965 he drank himself to death. Before Alan Freed's indictment, payola was not illegal, however, but commercial bribery was. After the trial, the anti-payola statute was passed under which payola became a misdemeanor, penalty by up to $10,000 in fines and one year in prison." (end of quoted material)

In a gray area, the station is indirectly at fault because by allowing this violation to take place, the licensee is not in control of the license.

Further, payola may be doubly illegal if the recipient does not declare and pay taxes on the money or goods received. Since the taking of payola is illegal, recipients may be less than gleeful about declaring their receipts on tax returns!

I'd say the only violation was the ID requirement. And, the station may have had an automation system failure and be able to explain that and show proof that the situation was remedied.

As to sloppy operations, that is nothing new. It no doubt comes from the fact that a large percentage of US radio stations are not profitable. Back over a decade ago when the FCC required financial reports, about 40% of stations did not make money. Of course, many were owner-operated and the owner had a salary and all the trade they could garner, but the point is that most US radio stations bill less than the gross sales of the average Burger King.

giggle That's funny.

The 98.7FM allocation here has been legaling as "KBEE Salt Lake City" for
months. The real calls are KBEE-FM. KBEE is their Radio Dismal station on
860AM.

Does anyone care? See my related post.

>has to pick one.

If listeners just picked out which station to listen to by format, then stations could pick up listeners just by "tuning" the format. That doesn't seem to be how the top five stations in any large market work, whether discussing by number of listeners or ad sales. The most successful stations also seem to have personalities attached to their success, rather than a format. If it were just format, the larger chains could just pick out the biggest numbers formats for all of their stations and rake in the money. It hasn't worked out that way. Satellite formats do seem to work for some, but the big numbers also seem to have on air personalities either local or satellite fed driving the success. People sure don't have Imus, Stern, Joyner, Limbaugh, et al on because they love the sound of their voices, but because said folks attract an audience. Similarly NPR stations don't have on Morning Edition because they like the sound of npr news, but because it attracts listeners and pledges. I also note that the new direct satellite feeds are the equivalent of cable, only without personalities, and just delivering format, it's doubtful they're going to deprive present day radio of much audience, unless they can get away with just delivering music with no talk, and I note that previous attempts to do that on radio have failed drastically. If people don't hear voices, they don't tend to listen regularly, so guess what, the direct satellite folks are going to have find personalities to drive their formats too.

The Macon Arbitron MSA consists of Jones, Bibb, Peach and Houston Counties. When they decided to move the oldies format to 105.5, they probably knew that they would lose out of market listening. However, since that kind of listening generally does not do much for revenues, the decision seems fairly obvious.

In the United States, the payola scandals of the late 50s coincided with the rise of rock & roll, which back then came almost entirely from independent labels (except for Elvis at RCA). By and large, the big record companies (Columbia, RCA, Capitol and Decca--Warners hadn't started yet and what was to become Polygram had no U.S. holdings) would've preferred to see rock go away, along with ASCAP (almost all rock/R&B/country songs were BMI). Thus they, with the help of the anti-rock newspapers and major radio ststions, pretty much made payola illegal, under the belief that the only reason DJs were playing rock was because they were getting paid by the record companies to play it. As we all know, that belief proved to be false--but the anti-payola laws are still on the books.

The other factor behind payola is that in the U.S., it was generally unmentioned by DJs that they were getting paid. I'm not that familiar with European radio, but in looking at the history of Radio Luxembourg, most of Luxy's English-language music programming in the 50s and 60s consisted of shows sponsored by the record companies that were clearly labeled as sponsored by the companies--and most listeners accepted them as

"infomercials" for the companies (especially since records were rarely played all the way through on those shows). I don't know if disclosure is still done on the European stations you mentioned, but it is generally agreed that American DJs did not disclose the fact that they were being given consideration to play records.

Anyone with better information, please post it.

Source record: 15106

If you listen to distant stations on AM as I do (the best programming
within 300 miles is better than the best programming within 30 miles
99% of the time), it makes no sense to talk about listening to
``Prime Time Radio 740'' if it's 300 miles away in Toronto; or
even think of it that way.

CHWO 740 does make sense.

CBL would have been as good. I don't know why they change the
call letters themselves. 3WE in Cleveland was even a neat call,
and they went to WTAM. Maybe it means talk all morning, who knows.
Nobody cares since they dropped Imus anyhow years ago.

Hmmm...seems you need some definition of
"storytelling programs" since some people will
lead you to the Golden Age of radio or old time
radio...on the other hand I agree with several
other posts, the 'best' presentation of new authors
(David Sedaris, Sandra Sing Loh, Sarah Vowell) and
story-tellers is "This American Life."

The best known story teller on radio today is
probable Garrison Keillor, no? Prairie Home
Companion.

Other popular public radio "story" programs would
be "Selected Shorts," "NPR Playhouse" (if you mean to include
'drama') and "The Loose Leaf Book Company" with Tom Bodett
who has taken to writing children's stories. Those are
some of the best and most widely carried shows...
If you just mean "The Spoken Word" I see programs listed
in a catelogue such as New Letters on the Air, What's the
word, Word for the Wise and so on. These are distributed
by public radio stations, NPR, PRI and various independent
producers.

And then many radio people, whether it's news, music or
literture, will tell you it's ALL Story Telling...even the
commercials.

From 'Ron Hardin':

>CBL would have been as good. I don't know why they change the
>call letters themselves. 3WE in Cleveland was even a neat call,
>and they went to WTAM. Maybe it means talk all morning, who knows.

The calls were changed for historical reasons. WTAM were the calls on 1100 for quite some time before they were WWWE. The station USED to be WKYC a long time ago, but they can't do that now, since Gannett owns WKYC-TV 3 and Clear Channel owns 1100. They both used to be owned by NBC.

>Nobody cares since they dropped Imus anyhow years ago.

Oh, whatever. :) I still listen to the Cavs and the Indians on 1100, although not the Browns since the Browns are simulcast on FM. I also -- sometimes -- find Mike Trivisonno's afternoon sports chat entertaining.

Country listeners listen to country stations. Soul fans listen to soul
stations. It's that simple.

>The most successful stations
> also seem to have personalities attached to their success, rather than a
> format.

The typical radio station runs at most TWO MINUTES of DJ chatter per hour
outside drive time. How much personality do you need?

>>
CBL would have been as good. I don't know why they change the call letters themselves.
>>

CB* isn't in the Canadian allocation of international calls, except by special arrangement for CBC-owned stations only.

VO** calls were inhertied when Newfoundland became part of Canada (1949?) ... that's why there are still VO** calls in what is now Canada (but no new ones, only "historical" ones).

>>
3WE in Cleveland was even a neat call, and they went to WTAM.
>>

WTAM was the original call (and originally on 1070) ... then it became WTAM (on 1100, after NARBA), then, briefly in the 1950s, KYW (on 1100) ... then WWWE (also on 1100) ... then back to WTAM (also on 1100).

So, WTAM is the "historical" call.

WKYC might have been an intermediate call when the RKO-General/NBC/Westinghouse interference issue was in process before the FCC ... basically, NBC told Westinghouse that it would lose KYW's TV net affiliation if it (Westinghouse) didn't agree to a swap of the NBC-owned Cleveland facilities for the Westinghouse-owned Philadelphia facilites ... hence, KYW's move to Cleveland.

Now, with Westinghouse (KYW-TV) and CBS (WCAU-TV) being co-owned by the merger of CBS into Westinghouse, NBC bought WCAU-TV/10, thereby ... finally ... giving it a legitimate Philadelphia O&O.

CBS/Westinghouse retains ownership of KYW/1060 and also WPHT (ex-WCAU)/1210.

This is hard to explain soI will put it as simply as possible. I think more than anything Americans love their independence...having a company paying stations to play only their own music is not very independent. And American radio stations are independently owned (that's the theory at least) and they want to choose their own music. And maybe the best example of the fact that all of this has worked well here...is this: All recording arists, yes ALL, want to make it in America...the world listens to american music...even if it is played by foriegn artists. Now over the years all of this has changed, but if you go back to the 40's and 50's I think you will see how American music changed the world music sound. Big Band was born in America, Rock and Roll, Blues, Jazz, Country...all have their roots in America's free enterprize system. Yes American radio is changing because of huge monopolistic corps like Clear Channel and I am sad about it. America is about personal liberty and free enterprize and we hate the idea of that changing.

Just a short version of why....but I hope that helps....plus we also have laws against personal payola...ironically not against corporate payola, but we just don't say it's because we played a particular song. It's legal but goes against the grain...most listeners don't know it happens...

Maybe it's just the dream that any kid in America can grow up to be President or a Rock Star without having a huge corporation pay for it all...

Over 30,000 stations and only about 30 of them have any sort of following.
On the other hand, the top five may have more listeners than some over-
the-air stations. A few actually get rated by Arbitron.

Payola could save many a struggling radio station. If songs could be sold as airtime like commercials, it would mean a whole new revenue stream. As it stands now, stations pay royalties to provide big record companies with unpaid ads. Employees may get all sorts of promotional swag, but that doesn't exactly help the bottom line.

This isn't payola. When the sponsor is identified it's not illegal. In
my mind, the downfall of this approach is that the sales department
will always win an argument against the PD. The PD has a "gut" feeling
the song will hurt the ratings. Can't prove it until the next book.
Actually can't prove it at all, since it's a small part of the program
content and Arbitron won't say "that Rap song between those Mozart
movements hurt your numbers."

The sales department has a very compelling argument for playing it.
The salesman has a check in hand.

Mr. Jeffries has stated the case against payola very well.

I'd simply say that it's wrong because it defeats the purpose of the marketplace.

People will not hear songs they might otherwise like if stations and DJ's are allowed to accept payments from one company while ignoring the music of another.

So? "Victrola" was a trademark that entered into colloquial use to
mean any phonograph. Even after LPs (a CBS invention, btw) hit the
market in the early 50's, my grandparents still referred to them as
"victrolas" well into the 1960's, and a phonograph players as a
"Victrola."

Oh, don't worry, the spineless FCC will over look it here because outfits like Clear Channel have better lawyers. Government agencies used to represent the citizens. Remember the foundation of the FCC? Serving in the "public interest, convenience and necessity". Remember when television stations could not air commercials longer than 5 minutes? The only redeeming value now is the fact that one has more choices on the cable and satellite, not having to watch that crap. Soon the same will hold true with satellite radio.

Actually, I believe that most of XM and Sirius' programming will have live hosts introducing the records at least part of the time--I don't have a complete list of who's doing what, but there are people with a lot of solid experience working for those companies. And the talk/news/sports formats that make up half of each service's channels will have personalities on them, as well. Both services seem to believe that having on-air personnel who know the various kinds of music they play and can communicate it to their listeners is a plus--the trick is talking just enough to keep the audience interested without boring them. We'll see how they do.

Just as this subject comes up, today's lead article on salon.com is about indie promoters and recent industry developments:

http://www.salon.com/ent/feature/2001/03/14/payola/index.html

Since the article's heading contains the words "why does radio suck?," you can figure out the tone of the whole piece--but what people seem to forget that it all boils down to "actives" and "passives"--and that there are a helluva lot more passives out there than actives. As long as it is that way, commercial radio will be programming for the passives, not the actives. "And that's the way it is" (either Walter Cronkite or Celine Dion).

KRLD-1080 Dallas and WTIC -1080 Hartford, the two blowtorchs on that channel will alternate silent periods and at one point both vacate the frequency. The time will be first thing Sunday morning 3-18-01. with KRLD leaving the air first at 12:00 Midnight, then WTIC following at 12:35 AM. If I have my facts correct KRLD will return to the air sometime after 1 AM and WTIC sometime around 2:00 AM. ALL TIMES GIVEN ARE CST! Both stations would appreciate your reception reports. Good DX!

Bingo!

I consider myself lucky to work for a station that...

1. Is owned by one person who comes to his station and works hard to keep it his way.

2. Has no satellite or voice tracked dayparts...all live and in house 24/7...I believe we're the only commercial FM in the market to make that claim

3. Still serves the community and serves it well...always accessible and always visible to the local public.

I called Sony's 800 number this morning to start shopping for their XM satellite radio. They answered they were still working on it, and it was due for a May introduction.

I'm still waiting for AmazonCom on a Kerbango order. They last said I would get it in mid-February, but I haven't heard any more since.

Peter <peterh5322@aol.com> wrote:

"WKYC might have been an intermediate call when the
RKO-General/NBC/Westinghouse interference issue was in process before the
FCC ... basically, NBC told Westinghouse that it would lose KYW's TV net
affiliation if it (Westinghouse) didn't agree to a swap of the NBC-owned
Cleveland facilities for the Westinghouse-owned Philadelphia facilites ...
hence, KYW's move to Cleveland."

The NBC call sign in Philadelphia was WRCV; as best I can tell the WKYC call sign wasn't used in Cleveland until the FCC undid the swap. (IIRC the old NBC TV call in Cleveland was WNBK.)

"Now, with Westinghouse (KYW-TV) and CBS (WCAU-TV) being co-owned by the
merger of CBS into Westinghouse, NBC bought WCAU-TV/10, thereby ... finally
... giving it a legitimate Philadelphia O&O."

I can't figure out why Westinghouse went to the trouble of moving CBS programming over to KYW, when they could have sold KYW back to NBC and kept the existing CBS O&O. Disney owned KCAL-TV in Los Angeles when they bought ABC, but they sold off KCAL and kept KABC rather than move the network schedule over. (The NBC/CBS deal was a partial swap; CBS got KCNC-TV in Denver from GE, which had still owned that station when they took over RCA.)

Far as I can determine, no special software or connections are required at all. Use Windows Volume Contol, find the Recording Control under Properties, and
select the checkbox for "Mixed Output Balance." Then even Windows Sound Recorder will capture the stream.

Probably also a good idea to go to the Playback side of Volume Control, mute Microphone, Line, etc., and be sure Wave Balance is unmuted. I think that's all there is to it, correct me if I'm wrong.

Ok experts, I sometimes have my bedside radio tuned to 740 for the Canadian station. Now and then what sounds like a US talk station will completely wipe them out - and I'm here in the Washington, DC, area. Even at 2 am I would doubt that it's KCBS. Maybe it's Orlando with their antenna a bit out of adjustment.

Try WVCH 740 Philly, 50kw unlimited hours CP, that ought to take CHWO Toronto off the air pretty quick.

Because at the time, they could not have. The original deal between
Westinghouse and CBS was just a standard chainwide affiliation, and it
was CBS -- not Westinghouse -- that had the responsibility of
disposing of WCAU-TV. (Of course, they also wanted to make sure that
they never lost rights to that heritage callsign, and build synergies
between KYW and KYW-TV.)

You will recall that the old Westinghouse TV affiliations were:

ABC - WJZ-TV
CBS - KDKA-TV, KPIX-TV
NBC - WBZ-TV, KYW-TV

With the exception of Baltimore (WJZ-TV), Westinghouse owned radio
stations with the same base callsign in every one of those markets,
and in the case of Pittsburgh, Philly, and Boston had been pounding
those callsigns in to the public's imagination for decades. (Which is
why some people in Boston and Pittsburgh will report that they're
listening to WBZ or KDKA even when they're not.)

1384. 97.1 FM Chicago on Classic Hits "Drive"

Newsgroup: rec.radio.broadcasting
Date: 2001-03-17 05:45:34 UTC
From: "Jeffries, Mark" <MJeffries@KRW.com>
Message-ID: <tb5ufulehf46a@corp.supernews.com>
Source record: 15141

After a month of stunting of one artist or genre played in a six-CD deck, Bonneville yesterday unveiled the new format for the 97.1 FM frequency where the beloved classical music WNIB was for 45 years--WDRV, "The Drive."

Designed to complement Bonneville's co-owned hard-leaning classic rocker WLUP (the Loop), the station's basically taking the classic hits approach (although the station's sweepers use the words "Timeless Rock"). The targets for Bonneville are two Infinity stations--WJMK (Oldies 104.3) and AAA WXRT. The blend of music is reminiscent of WXCD (CD94.7), the Disney/ABC station that the Loop forced into flipping to 80s oldies as WZZN (the Zone), with its mixture of classic rock standbys from the 60s and 70s with some classic R&B and vintage pop oldies that many classic rockers won't touch.

The difference in the Drive's approach seems to be the avoidance of heavy production that seems to mark almost all radio stations nowadays. When the station signed on Thursday morning a few seconds after the last notes of the Paul McCartney album "Band on the Run," ending the stunt programming, the sweeper announcing the new format was the station's soft-spoken image voice saying that the Drive was to feature music "without the hype"--and the only production was the station's audio signature, the sound of a car driving from one stereo speaker to another. Other sweepers emphasize such things as "no hype, no BS, no contests, no silly morning shows...respect for the music and you the listener." The station's even doing the unheard-of in today's radio approach of segueing between every other song, rather than running a sweep or a jingle every time.

After the Drive kicked off on Thursday with the local favorite "Lake Shore Drive" by Aliota, Haynes & Jeremiah and "Drive My Car" by the Beatles, it will be running jockless and commercial-free for a few weeks until an air staff is hired by PD Greg Solk, who is programming the station along with the Loop (something else unusual lately, as most recent format flips have been accompanied by the same five-minute stop sets as everybody else). That staff will probably include Chicago AOR veteran Bob Stroud and his weekly showcase of Top 40 rarities "Rock & Roll Roots." Stroud was signed by Bonneville earlier this week to a long-term contract with no specific station mentioned at the time.

Although the station musically is very familiar, the blend, to this writer's ears, seems right--and it's refreshing not to have overproduced sweepers and over-testosteroned image voices banging in your ears. The hyperactives will hate it, but that's to be expected. There'll also be fallout from the many who loved WNIB, but that's also to be expected whenever a classical music format closes up (and at least Chicago still has Window to the World Communications' WFMT). Is there an audience in Chicago for familiar rock in

a low-key presentation? Will the Drive be forced by competitive pressures to take on a morning zoo and a $1,000 song-of-the-day contest (as CD94.7 was forced to do, with little success)? We'll find out.

That 50 kW is only during the day, they will still be running only 6 Watts
at night. Even with 50 kW, the daytime radiation toward Washington will
probably be considerably reduced from what it is now with 1 kW, due the
aggressive directional pattern that will be used. Doesn't sound like
WVCH, even at 50 kW will have much chance of taking Toronto off the air.

As far as I know, there are no Regional Muxes on air yet!

As far as the comments from 'Lawrence & Helen' go, then saying DAB makes FM sound like AM is a load of bollocks & an understatement!! So when was FM restricted to 4.5 kHz Bandwidth then????

If your talking Dynamic Range than yes DAB does sound much better than FM! But for overall frequency range, then most DAB stations don't match the quality of FM in my opinion. The 192 kbps stations (BBC R's 1 - 4, plus Virgin) do sound very good & match, of not better FM audio quality. However, I can hear the watery undersampling/audio compression effects on stations like Core, Life & Planet Rock etc using 128 kbps. As far as ITN & Oneword goes, then they sound only slightly better than AM, as they don't have enough bandwidth.

If DAB succeeds as a new broadcasting medium, then the Mux operators are going to have to seriously re-think about whether they are going to go for quality audio or loads of services on each mux. My personal opinion is that they will choose the latter, thus defeating the purpose of the medium in the first place!!

In the mean time, I'm quite happy with my FM receiver & personally speaking don't mind audio processing on analogue stations (providing they don't take the p*ss with over the top 'thrashed to death' sound), particularly due to the fact that it then enables the audio in the car to be perceivable over background noise!!

I can't possibly see how pre-1996 ownership restrictions (assuming that's what you're talking about) stifled anything but the ability of Clear Channel and friends to brute-force buy the locals out of the radio business. I have no reason to believe there were bad intentions behind the ownership limits created so long ago. It's not like those regulations *hurt* competition or *helped* large corporations or anything, and here I'm assuming competition promotes creativity for the sake of argument.

> For example: how many people still go out for a "sunday drive" with no

Not to mention more people relocating to find employment because the market for whatever their skills may be in whatever city they may live in sucks. Such as technology, just you try to find a good Unix job in some cities, for example.

> Don't get me wrong, I think the idea of local content is

> to encourage such creativity.

There was a time long ago when you could actually find a regulation here and there that actually might have done the public some good. Regulation is a completely different beast now that large corporations are buying politicians left and right, and anything that does the public any good is killed by Democrats and Republicans, whom I collectively refer to as Republicrats, and I don't see that ever changing. And that's a major factor in the question of whether it's better to have too much or too little government regulation.

A rare case of someone actually attempting to close the barn door, while the horse (some might say 'jackass') is still in the barn.

For that you are to be applauded.

Your odds at being successful in stopping CC from this are nil.

Sorry to burst the balloon, but deregulation brought this on, and its too late to stop this.

Now swing open that barn door before you are the victim of a 'jackass stampede'.

The FCC didnt stop deregulation..hell, they encouraged it. You think for one single solitary moment theyre going to tell CC they cannot do this?

Hee, hee....gotta have a sense of humour with this.

Have a pleasnant evening.....

"Stage Left" is an internet radio show bringing you a lively and eclectic mix of music, comedy and spoken word from the stage and screen. It's produced at the studios of community radio station KDHX-FM in St. Louis, Missouri, USA.

The latest edition of the "Stage Left" webcast went on line Wednesday (the 14th). This week the subject is "Now Playing". The show features music from current films: "Shadow of the Vampire", "The Caveman's Valentine", "The Mexican" and "Hannibal". We also have the "William H. Macy Film Festival" segment, featuring music from the films of my co-host Amy's favorite character actor (e.g. "Mystery Men", "Happy Texas", Magnolia").

As a result we've got a show that ranges from contry to psycho classical (the "Gourmet Waltz Tartare" from "Hannibal", which has to be heard to be believed).

Listen to it at your convenience at http://www.kdhx.org/real/slcurrent.ram. The playlist (with lots of background on the music and useful hyperlinks) is available at http://www.stageleft.org.

You can also get both the current episode of "Stage Left" and last week's show at http://www.stageleft.org or at http://www.kdhx.org/listen.htm We'll be archiving a month's worth of shows.

Next Week (3/21): "Sing a Song of Oscar" - selections from music nominated for the "Best Score" award, along with an interview with Michael Lanning from the cast of "The Civil War". Cast your own vote for best score at stageleft@kdhx.org.

WVCH has a CP for 50 kW days in a tight pattern toward 132 degrees (180 degrees away from Toronto). Their nighttime power is a gigantic six watts non-directional. Everyone at the Liberty Bell should be able to hear that!

The page doesn't say the CP is for daytime only. Where is the pattern? I listen
to CHWO in Central Ohio, and WVCH must be planning on sending the energy somewhere
if not DC.

Don't know for sure, but KRMG in Tulsa usually gives CHWO a run for its
money down here in Nashville. (and the format is right)

Strangely, CHWO seems significantly stronger here than they did when they
were CBL. (my understanding is they're using the same transmitter &
antenna) I suppose it's more aggressive processing.

KRLD has had a meter 'at the shop' for calibration for some time. They just got it back so have to turn the transmitter off to install it.

So the two CE's got together and said 'It would be interesting to see what stations are would be heard on 1080 if we, the big daddy's, weren't there.'

And this is what they came up with.

Let the DXing begin!

On 740 it's the Canadian which is the station of higher class, and Class I-A (CBL or its successor) is higher than any other class [*], even a Class I-B (of which none exists on that channel [**]).

Canada will never give up 690, 740, 860 or 940, although Canada has abandoned other Class Is already (or can reasonably expected to soon).

[*] There is only one frequency with two Class I-As ... 540.

[**] 640 has a Class I-A and a Class I-B (the Canadian I-B is restricted to 10 kW); 690 has a Class I-A and a Class I-B (the Canadian I-A runs 50 kW; the Mexican I-B runs 77/50 kW).

KRLD is replacing some components in their antenna system, hence the silent period. Both KRLD and WTIC are Infinity/Viacom stations and the CE's got together to give those of us who still like to "DX" a shot at hearing both stations with out the other interfering.

KRLD and WTIC have similar nulls toward each other. I'm only guessing but KRLD might have the better signal on night pattern because of somewhat better ground conductivity (WTIC's towers are located on what passes for a "mountain" in New England). Scott Fybush had a feature several weeks ago on the WTIC towers on his website, www.fybush.com. Both stations operate 2 tower DA's at night.

So enjoy the DX!

Class I-Bs using identical patterns include WWVA/KVOO and WBT/KFAB.

KSTP and WTOP changed their patterns recently, in response to interference caused to WLQV. Previously, the patterns were somewhat similar, and tighter, but not identical.

KRLD and WTIC operated on different frequencies, pre-NARBA. KRLD has the superior pattern as it was the "historical" occupant of its frequency (WTIC was moved to 1080 from another frequency, so it has no "historical" rights to 1080).

Sounds like the "format-of-the-month club" is still alive and well on 94.7.

Tsk, tsk...if only they had continued WLS on FM, rather than killing Top 40 to
make room for the new talk format. Same format, same airstaff, same jingles,
same great station...just move it from AM to FM.

Of course, that would have made too much sense for the consultants, focus group
leaders, and corporate bean counters.

Much to the displeasure of Victor, and later RCA.

'Even after LPs (a CBS invention, btw) hit the market in the early 50's, my grandparents still referred to them as "victrolas" well into the 1960's, and a phonograph players as a "Victrola."'

Know when RCA stopped using the Victrola name on its record players? 1968, at the same time that they stopped using the Victor name on consumer electronics products (and downplayed it on record releases) and, temporarily, stopped using the "His Master's Voice" logo. Last time I looked, Thomson still printed the Victor and Victrola names on the back of RCA console TVs (though not table models or portables) to maintain the trademarks.

The outlook is not good, can you help please? At least please register your support and join the mailing list:

From: http://www.radiocaroline.de/

Thursday March 15th 2001

Mark Stafford's News Report
The clock is ticking on towards the 31st March and the closedown of the analogue service of Radio Caroline.

Meetings continue, quotes are still awaited and prices are still being negotiated. But sadly, it now looks as if time has beaten us and that their will be a gap between us leaving the air on the 31st March 2001 and returning in a digital format. Having spoken to Peter Moore earlier today it looks likely that this will be at least a month. So, stock those tape recordings up.

Life without Caroline on the satellite will be strange and the thought of returning to those other radio stations must fill some of you with dread ! It's probably a case that after two years "you never know what you've got 'till it's gone". Maybe we were beginning to be taken for granted.

Anyway, Peter Moore continues to analyse the financial implications of each potential broadcasting option. More and more it starts to look like 28 East and being on the Sky EPG (and free to air for anyone to receive) is out of our financial reach. So, we are interested in how you would react to Caroline broadcasting only on 19 East with a digital service. It would mean some creativity or some expense in order for you to receive us but we will still be on the air. In fact 19 East digital would be seen by our German and Dutch listeners as good news but sadly this would be at the detriment of our service to UK Sky-digibox owners.

As we have said before for once in its life Caroline can choose how it wants to broadcast on satellite, but it entirely depends on the vital funds generated by those members of the support group. I personally believe that a move to 28 East and being on the Sky EPG menu would bring Caroline back to so many listeners who thought that we had died in the 1980's ! The inevitable result will be increased support and the prospect of some low-key real advertising. Hence the importance of the survey. Five million subscribers can't all ignore the Radio Caroline name on that Sky Menu ! Many will be tempted to push that button.

But Sky Digital requires either a very significant increase in support group numbers or the taking up of an idea that is currently being kicked around on

another part of the internet. That is a direct appeal to all supporters for a short-term 12 month doubling of their contributions to the support group. Now, this is not a suggestion from head office (that may come later) but is just a testing the water exercise. You the regular supporters have done so much that we would feel guilty about asking for more and we recognise that to some even the current subscription is difficult to give.

But any day now the choice will have to be made between the safe and much cheaper option of digital on 19 East only. Or, a direct request to supporters for an increase. Without that it appears that the Sky Menu will be out of our reach. Unfortunately, so will the millions of potential fellow Caroline listeners who lurk there at 28 East oblivious to the fact that Radio Caroline, the station they went to school listening to in the 70s or sat on a deckchair on Frinton beach in the 60s listening to still exists.

Still, life goes on for now, I hope you will join me on Sunday between 1 and 5pm as we head back to March 1975 on a Caroline Rock Flashback and also take a trip into The Lost Classics Zone for the penultimate time.

If want to register your views on any points made here (please remember that some of these are mine and may not reflect the Chairman's view - official disclaimer to save Stafford from getting the sack from Caroline !) please feel free to e-mail me and I will pass the comments on mark@rblradio.co.uk

Talking of registering, that survey becomes ever more important as the weeks pass by please check it out further down the page. Also don't forget, for a lively debate about all things Caroline and another chance to air your views visit this place ...
http://groups.yahoo.com/group/RadioCarolineMailingList

This is the home of the new Radio Caroline Mailing List which I am pleased to say is gaining members at a rapid rate.

Best regards
Mark Stafford
Radio Caroline

If that much...though an equally unlikely possibility is KRMG Tulsa.

1411. Re: why is payola wrong-Morphing Topic

Newsgroup: rec.radio.broadcasting
Date: 2001-03-19 15:54:40 UTC
From: JerichoProductions <jerichoproductions@home.com>
Message-ID: <tbcau0hg006gf4@corp.supernews.com>
Source record: 15072

My 2 cents...

1) Payola is wrong.

2)This isn't payola.

3)This was also tried before, and it failed.

4)Some, (not all) "other media" will love to write stories about it *being* payola, to stir up attention, and run down radio, which is a competitor for ad dollars.

(Though they *do* have the word "advertisement" in some of those "special sections" of the papers and on the internet, try reading, for example, the "new car" section of many major papers, and try finding any negative or honest critiques of the vehicles. Pot calling the kettle black, or worse.)

BUT-- the Bigger Issue that still bugs me is: why should *anyone * have to pay a station to do it's job? Talk to a good number of consultants. They'll tell you never to back-announce. Just Crush N Roll- don't look back.

Heaven forbid we ever tell a listener the title and artist, unless we're about to go to break.
I've been told (in a rather patronizing manner), when I've asked, "if they want to know the name of the song, they'll call you. Besides, your P1s know the title and artist."

Uh, huh. More likely, they'll just get honked off and change the station, or turn the radio off for a CD or book-on-tape.

So, I usually ask, "well, then why do we give the Calls or Identifier every time we open out mouths?"

That's never really answered. Usually I get a response suggesting, after so many years in radio, I should

1)know the answer.

2)not be so stupid as to suggest we *shouldn't* ID the station each break (funny- I never made that suggestion)

3)or, as one consultant put it to me, "Ah- the back-announce-- the crutch of the untalented. Surely, you're not saying you can't do your job without it. Perhaps you don't belong at this station."

In a day and age when "singles" as we once knew then don't exist, or carry far less weight than knowing even the album title ("horror! that's an extra 3 seconds taken away from out positioning statement!") Why is this so

commonly accepted?

I'm not flaming, I'm not bitter, and I'm not unemployed- just mystified.
Comments, please?

(ps- not that I agree, but most jocks I've spoken to come up with the
following theory: "Crush and Roll helps stations switch to voice-tracking.
It's a load of hooey that protects the bottom line."

And I though *I* could play at being paranoid! :)

>>
> KRLD and WTIC operated on different frequencies, pre-NARBA.
> KRLD has the superior pattern as it was the "historical" occupant
> of its frequency (WTIC was moved to 1080 from another
> frequency, so it has no "historical" rights to 1080).

KRLD was on 1040 before 1941.
>>

All stations below 740 kept their same frequencies as before 1941 (the agreement was signed in 1939, BTW); all frequencies 740 and above were moved according to the "table method" (most stations) or according to an exception to the "table method" (under 100 stations).

KRLD was indeed on 1040 before NARBA, and is now on 1080.

WTIC was on 1060 before NARBA, and is now on 1080.

The only station which moved from 1040 (before NARBA) to 1080 (after NARBA) was KRLD.

KRLD was moved as an exception to the "table method" of reassignment under NARBA, but KRLD kept its "historical" status as the primary occupant of its assigned clear channel (before and after).

WTIC was sharing 1060 with WBAL before NARBA, and both WTIC and WBAL became Class I-Bs, in-fact, after NARBA, each on different channels (1090 for WBAL).

The other long-term occupant of 1080, KWJJ, was also on 1060 before NARBA.

So, before NARBA, you had KRLD and several daytimers, including KTHS on 1040; and WTIC, WBAL, KWJJ and several other daytimers and fulltimers on 1060.

After NARBA, you had KRLD and WTIC on 1080 as Class I-Bs, in-fact, and KWJJ as a Class II-B, in-fact; and WBAL on 1090 as a Class I-Bs, in-fact, and later, after its move from Hot Springs to Little Rock, KTHS (now KAAY) would be added as one of the last Class I-Bs.

Turner, please take your trolling little ads for your show somewhere else- like rec.radio.shortwave, where the nuts there will lap it up by the spoonful. The people in this newsgroup are interested in radio. You state that it wasn't your aim to impress anyone- I tend to disagree- respectfully, of course. This newsgroup is loaded with professionals in the field who just won't buy the sensationalistic spin, and yes, targeted tittilation. I suspect that you will not find this newsgroup to be a very happy hunting ground as you "troll" for more listeners.

If that much...though an equally unlikely possibility is KRMG Tulsa.
>>

KRMG's pattern is ENE and WSW days (three towers) and ENE and SW nights (six towers).

KRMG protects KTRH days and KTRH and CBL nights.

The day pattern design provides about 220 kW towards Tulsa and Oklahoma City from 50 kW in, and about 1 kW towards Houston.

The night pattern design provides about 200 kW towards Tulsa and about 150 kW towards Oklahoma City from 25 kW in, and less than 0.1 kW towards Houston and less than 0.1 kW towards any point on the U.S.-Canadian border.

WXYZ is in business to be an entertainment destination or "brand" in its own right. Its task to that end is to promote WXYZ, not Luther Vandross. Luther Vandross is merely a vendor. Your station has no desire to teach listeners how to bypass the station and go straight to a vendor. Nor does it have any desire to allow Luther to bypass the station's ad sales department and be promoted jock to listener. Nor do the station managers or consultants you've been speaking to have any special desire to teach you these essential facts of marketing, and put you in a position someday to bypass *them.*

If you're a jock, you're a vendor as well; and your station properly also sees you as present or future competitor for your listeners' loyalty. That's why they so often keep you to the script and require you to use a brandname *they* own to identify yourself on air.

If you believe I'm being wry or cynical, you still don't get it. These are the rules of your world.

Nothing on 1080 after KRLD signed off at midnight. I was
listening on a car radio in Fort Worth, TX. Did get a nice
strong signal from KFDI 1070 Wichita KS which I have
never heard with KRLD on the air. Around 12:35 am KFDI was
airing Paul Harvey from Saturday's noontime broadcast.

1422. Rich Wood GONE from WOR

Newsgroup: rec.radio.broadcasting
Date: 2001-03-20 00:06:00 UTC
From: Dan Updike <dupdike@flpradio.com>
Message-ID: <tbd7n8s1urt1e8@corp.supernews.com>
Source record: 15083

From Radio Business Report:

WOR Radio Network lays off Rich Wood (3/19)

Not long after pulling WOR-AM host Bob Grant out of syndication, WOR Radio Network Director of Syndication and original founder Rich Wood has been laid off by the company. The biggest reason: a sluggish ad market. "Times are very, very tough-you've got Clear Channel owning many stations and they're vertically integrated so they have their own shows; CBS/Infinity, pretty much the same thing with Westwood. There's no growth left,
at least within the company. And it became a velvet rut. I have been thinking, for the past six months of leaving, and they did me a favor," Wood told
RBR.

"Rich is talented in any number of areas and a good friend. And he was really instrumental in launching our network 10 years ago," said WOR Radio Networks President Kirk Stirland. "But the business has changed and our organization kind of needed to evolve with that. Sadly, that has Rich leaving.
It's a tough market out there, but I don't think of it as a negative, as much as a different business."

Woods' next move? "I'm looking to do something very interesting. I've got lots of Internet experience, obviously lots of broadcast experience-somewhere in there is a melding. I don't really want to do what I just ended-the advertising market for networking is horrible. I'm going
to take a little time and think about it. However, the most foolish thing I could do is to rule out calls from other syndicators-somebody may have a great
idea. Dick Brescia came to me 10 years ago with a great idea to syndicate the Tom Bodette 'End of the Road' show. And I gotta tell you, I had more fun doing that than anything else in my career," Wood said. Rich Wood can be reached at 212-675-6775.

Here in Connecticut, I heard unidentified Spanish station after WTIC signoff. Splatter from WBAL eliminated any chance at an ID. There was a station playing music underneath, but very faint. When KRLD came back on, it dominated the frequency, occasionally wiped out by splatter but usually in the clear. I use a Radio Shack DX-398. Went out to the car and heard KRLD there, too.

If that much...though an equally unlikely possibility is KRMG Tulsa.
>>

KRMG's pattern is ENE and WSW days (three towers) and ENE and SW nights (six towers).

KRMG protects KTRH days and KTRH and CBL nights.

The day pattern design provides about 220 kW towards Tulsa and Oklahoma City from 50 kW in, and about 1 kW towards Houston.

The night pattern design provides about 200 kW towards Tulsa and about 150 kW towards Oklahoma City from 25 kW in, and less than 0.1 kW towards Houston and less than 0.1 kW towards any point on the U.S.-Canadian border.

Turner, please take your trolling little ads for your show somewhere else- like rec.radio.shortwave, where the nuts there will lap it up by the spoonful. The people in this newsgroup are interested in radio. You state that it wasn't your aim to impress anyone- I tend to disagree- respectfully, of course. This newsgroup is loaded with professionals in the field who just won't buy the sensationalistic spin, and yes, targeted tittilation. I suspect that you will not find this newsgroup to be a very happy hunting ground as you "troll" for more listeners.

WXYZ is in business to be an entertainment destination or "brand" in its own right. Its task to that end is to promote WXYZ, not Luther Vandross. Luther Vandross is merely a vendor. Your station has no desire to teach listeners how to bypass the station and go straight to a vendor. Nor does it have any desire to allow Luther to bypass the station's ad sales department and be promoted jock to listener. Nor do the station managers or consultants you've been speaking to have any special desire to teach you these essential facts of marketing, and put you in a position someday to bypass *them.*

If you're a jock, you're a vendor as well; and your station properly also sees you as present or future competitor for your listeners' loyalty. That's why they so often keep you to the script and require you to use a brandname *they* own to identify yourself on air.

If you believe I'm being wry or cynical, you still don't get it. These are the rules of your world.

Now that I just took my latest trip to Tucson, I thought it was the time to ask the following:

From my home in north Mesa, I can get 4,6 and 9. I know why I can't get 11 (their tower is south of Green Valley), but why can't I get 13 or any of the UHF stations (the only reason I can think of is that all the UHFs there are directional, except Channel 46,assigned to Green Valley,tower on Mt. Bigelow. I recall I used to get 13 (Tucson Mountains,303kw, omni) until the early or mid '90s, and I can't get it anymore except a faint b/w picture once in a while,and no sound.

Also, why is it that some Tucson stations (including 6,9, 90.5 and 92.1) have repeaters or translators within the area? Isn't the main signal enough to cover the area (KUAT 6 is 35,500 watts,omni on Bigelow. Why do they need a repeater on the west side (KUAS 27, 30,200 watts directional), and why does KGUN 9 (110kw omni,Mt Bigelow) have its translators on Tumamoc Hill? Isn't 110,000 watts enough to cover the area?

As usual, nothing here in Florida besides Cuba en Espanol. Some weak signals
in a jumble underneath, but nothing that I could make out.

I'm surprised Wayne Eddy (owner/GM of KYMN/1080 in Northfield, MN) didn't jump
at the chance to do a late-night DX test!

1436. Rich Wood GONE from WOR

Newsgroup: rec.radio.broadcasting
Date: 2001-03-20 02:14:16 UTC
From: Dan Updike <dupdike@flpradio.com>
Message-ID: <tbdf7o3brt9je5@corp.supernews.com>
Source record: 15096

From Radio Business Report:

WOR Radio Network lays off Rich Wood (3/19)

Not long after pulling WOR-AM host Bob Grant out of syndication, WOR Radio Network Director of Syndication and original founder Rich Wood has been laid off by the company. The biggest reason: a sluggish ad market. "Times are very, very tough-you've got Clear Channel owning many stations and they're vertically integrated so they have their own shows; CBS/Infinity, pretty much the same thing with Westwood. There's no growth left,
at least within the company. And it became a velvet rut. I have been thinking, for the past six months of leaving, and they did me a favor," Wood told
RBR.

"Rich is talented in any number of areas and a good friend. And he was really instrumental in launching our network 10 years ago," said WOR Radio Networks President Kirk Stirland. "But the business has changed and our organization kind of needed to evolve with that. Sadly, that has Rich leaving.
It's a tough market out there, but I don't think of it as a negative, as much as a different business."

Woods' next move? "I'm looking to do something very interesting. I've got lots of Internet experience, obviously lots of broadcast experience-somewhere in there is a melding. I don't really want to do what I just ended-the advertising market for networking is horrible. I'm going
to take a little time and think about it. However, the most foolish thing I could do is to rule out calls from other syndicators-somebody may have a great
idea. Dick Brescia came to me 10 years ago with a great idea to syndicate the Tom Bodette 'End of the Road' show. And I gotta tell you, I had more fun doing that than anything else in my career," Wood said. Rich Wood can be reached at 212-675-6775.

Here in Connecticut, I heard unidentified Spanish station after WTIC signoff. Splatter from WBAL eliminated any chance at an ID. There was a station playing music underneath, but very faint. When KRLD came back on, it dominated the frequency, occasionally wiped out by splatter but usually in the clear. I use a Radio Shack DX-398. Went out to the car and heard KRLD there, too.

Actually, by the time WLS went talk, it was a shadow of its former self. Shortly after Larry Lujack retired and John Gehron left in late 1987, the station's music became this strange mix of AC and adult standards, where the Little River Band and Dean Martin were played back-to-back (and no current music at all!). Also, 'LS was running Tom Snyder and/or Sally Jessy at night from the net. John Landecker, who replaced Lujack in afternoon drive, must've felt about the same way that he felt when Gehron put Steve Dahl and Garry Meier against him in afternoon drive on WLS-FM back in 1981--but he persevered until the station went talk and he and Fred Winston were fired.

Meanwhile, the feeling at ABC must've been that the FM, Z95, was to continue the Top 40 tradition of WLS, but the management who replaced Gehron pretty much blew that by first firing popular morning man Paul Barsky (who I personally didn't care for, but I knew that other people liked him), then by bringing in Randy Michaels to turn the station into another Power Pig like WFLZ. When that failed miserably (along with the "Hell Radio" stunt), the ABC Top 40 tradition in Chicago was pretty much damaged goods and "Hot 94.7," the last tweaking of the format, just didn't draw anyone. And except for the O.J. trial (which WLS-FM carried live as a last-ditch effort to save the "young talk" format that got good ratings but didn't save the format) and a couple of books as CD94.7 before people discovered that the Loop was playing Ozzy and AC-DC again, the ABC FM station in Chicago continues not to draw people.

As usual, nothing here in Florida besides Cuba en Espanol. Some weak signals
in a jumble underneath, but nothing that I could make out.

I'm surprised Wayne Eddy (owner/GM of KYMN/1080 in Northfield, MN) didn't jump
at the chance to do a late-night DX test!

I agree in most respects to the "forward momentum"
programming philosophy, however I always program
new music last in 1 music sweep an hour, so I can backsell
it, giving the title, artist and album if possible.
You all know that the number one complaint that listeners
log against radio today is the lack if identifying the title
and artist. This has usurped the proverbial "DJ's talk
too much" as the #1 complaint. I agree that our job isn't
to sell records or move product for record companies,
but I do believe it is our job to superserve our core
audience, and backselling one tune an hour is my attempt
at serving our listeners. I will only spend 10 seconds on
my backsell, followed by 15 seconds selling an upcoming
music sweep and/or contest, which is followed by a station
promo as the first element in the stopset, so I am only in
10% violations of what most consultants say.
To backsell during a sweep is the KISS of death (oops,
sorry for the trademark infringement, Clear Channel), and I
would never do that.

1444. Traffic reports/station ownership

Why is it that there isn't one radio station,no matter where I go, that hires its own studio traffic reporters? EVERY station I listen to uses traffic services instead. (Like Skyview, Shadow,Metro Networks.)

And these same reporters use different names on different stations. I.E. here in Phoenix, the person who is David Reed on the Clear Channel stations is Dave Teller on the Emmis stations, and David Dorsey on 1190. Why don't these people use their real names?!

And speaking of ownership, CBS recently bought KOOL, The Zone and Camel Country... Why is it that none of the English language *AM* or *TV* stations here(besides Fox 10,and Radio Disney 1580)are owned by their network; and why is it that while it seems companies like Clear Channel own every station in the country, why is it that the networks can only own like 25% of the nation's tv and radio stations,or something like that? Seems like you have to go to NY,LA,SF or Philly to get a high percentage of O&O stations.

Thanks, Mark, for accurately describing what really took place in the late 80s at those two sister stations. It saved me from having to respond to Drew's cheap shot.

No doubt it feels good for someone out of (radio) work to blame everything on "corporate bean counters", but it kinda makes that person look foolish when the facts are otherwise.

Try the right attributions, Hal, that was my quote.

>It is as relevant as was the sexuality of Matthew Sheppard. Or is it only
>newsworthy when straights kill gays and not when gays rape and kill
>straights?

You're missing the point, sir.

Rape is evil, regardless of the race, ethnic background and sexual
orientation of the rapist or the victim.

It's not more or less evil because one of the people is gay, straight,
black, white, whatever.

You obviously don't get up here to Vancouver. Both the station I'm
at and the copycat station across the creek from us both have their
own people every ten minutes, around the clock. We actually have two
during both drive periods - one in the air and one on the ground -
and both are company employees and don't belong to some service.

Darren Stuart, I just don't have the semesters it would require to bring you fully into the world of reasoned discourse. No disrespect intended. I'll give you one example, take from it what you can:

If someone in drivers-ed were describing the safety benefits of motorcycle helmets and leather riding gear, and the science and reasoning behind them, you could triumphantly point to the many people who have been injured or killed with the gear on, and the many others who had cycled to their destination in T-shirts and shorts. You'd be high-fiving it with half the class, but it wouldn't be the smarter half.

By the way, the fellow you're quoting in your tag line is Scott Rosenberg, not Rosenburg. Managing editor of Salon. Twenty five years ago, three juniors sought the editorship of their high school newspaper and got the chance to edit a spring issue. Scott Rosenberg. Eliot Spitzer, presently the great Attorney General of New York State. And yours truly.

Jerome

Okay, let's try the same idea with different timing. How about if the CHR format was moved to FM *before* WLS-AM began it's slow death? Early-mid 80s would have been fine. I know "The Big 89" was still intact as of 1985, because I used to listen to Turi Ryder at night when I was working for a small station in Western Kansas. Why didn't they just move it to FM? Would have been a no-brainer.

This is precisely what KDWB/Minneapolis did in 1983 and it worked wonderfully for them. The station recently celebrated 40 consecutive years of Top 40, as of October, 1999. There's no reason WLS couldn't have a similar heritage today.

Yeah, but using the station's equipment to draw $$$ OUT OF HIS CHECKING ACCOUNT?!?!?!?!? That's against the law!!! I believe they call that EMBEZZLEMENT (or at the very least THEFT!).

I've never been in broadcasting until the Internet came along, but I would think he has a good case in the criminal courts!!

But (as Dennis Miller would no doubt say), that's just MY opinion. I could be wrong. :-)

No, he did not. He recommended being realistic about something that is still not happening and has cost many companies many millions of dollars in unrecovered expenses. Rich's point: it is not happening yet and when it does, the content providers will be the same ones we already know.

Drew A. Durigan <mnmaniac@aol.com> had written:
|I wonder if Rich still feels so adamant about mega-conglomerate radio deserving
|to own and control everything while "Billy Bob" deserves nothing.

I had wondered how low it was possible for someone to go in a discussion on rec.radio.broadcasting, but I think you've made the bar so low that even the most limber limbo dancer would have to see a chiropractor afterwards.

I didn't agree with Rich on much of anything, but he still made valuable contributions here and elsewhere. I'm not about to celebrate his separation from WOR, nor should anyone else. It's a tough economy right now, tough decisions are being made, and some good people are going to get hit by those decisions. That would happen regardless of whether the ownership was corporate or whether it was a thousand mom-and-pops. At least the corporate owners know about things such as outplacement and severance packages.

So is murder. And the murder of Matthew Sheppard was not more or less evil
than the murder of Jesse Dirkhising, but the media chose to pay more
attention to Sheppard's murder BECAUSE of his sexuality. If that's the
standard to be used, the I'll use it as well when sodomite perverts rape and
kill straight people.

I find my discourse pretty darn reasoned, actually. It just happens
to be simple. It may sound simplistic to some, but sometimes the
simplest reasons are the best ones. It also happens to be from the
point of view of a listener; I'm not an insider so I'm afraid I can't
be complex enough for you with regard to this topic. :)

> wouldn't be the smarter half.

I never thought a radio station that can accomplish good imaging and
other aspects of brand identity without sacrificing backannouncing was
an exception to the norm, hence my assertion that if a radio station
felt that backannouncing threatened its imaging it had bigger
problems. <ANALOGY>If you think band-aids are going to save you from
a fiery auto crash but you refuse to wear a seat belt then you have
bigger issues.</ANALOGY>

SSC: I don't know as much about the radio business as insiders do; I
lurk and occasionally post on r.r.b out of casual curiosity, or maybe
some vague need to be a slightly more informed radio listener.

Because it's cheaper, and the information is generic, although the
infrastructure needed to gather it is quite expensive both to own and
operate in a large city. The days are long over when individual
stations could afford to put aircraft in the sky. So these companies
allow spreading of the cost. If that couldn't happen, the service
would not be provided by anyone.

First of all, it's cheaper (since the stations get it on barter). Also, the traffic service has things like aircraft and ground vehicles that the station either can't afford or doesn't want to pay for beyond the Department of Transportation information that anyone can get for nothing. Back when Chicago Shadow was in the John Hancock Observatory, if they couldn't verify anything from the airplanes or ground units, they would just pull out a high-powered telescope and go out on the observatory to find it!

> use their real names?!

That's generally the station's choosing--many stations want a reporter's name exclusive with their station, although some reporters do use the same name (and often the real name) on more than one station. Besides, there are a lot of peole in radio who don't use their real names. :)

Stations can have their own people read the traffic from faxes or E-mails sent by the service--particularly if they're the squeaky-voiced female Morning Zoo sidekick with the mechanical giggle at everything the wacky lead man says--but the services recommend their own live people because their people can ad lib off of the DOT monitors and other information on their terminals and give more current information, while fax and E-mail reports have to be scripted before they're sent to the station.

Luck of the draw--also, I believe that the cross-ownership rules are still in effect where radio station owners are discouraged from owning TV stations and vice versa (although there are lots of exceptions, most of them grandfathered before the cross-ownership rules came in effect 30-some years ago). Also, I believe that in the largest markets one owner can own up to 8 stations (4 AM, 4 FM, although that's not hard and fast--but I believe that if you own 5 or more stations, there should be at least one AM among them).

The rule about the networks (or any other group owner, for that matter) in television for now is that they can own stations in markets covering up to 35% of the nation. They want to change that. We'll see.

Thanks, Mark. When something like this happens you really get to know who the pros are. Job security at any level in broadcasting is rare. Depending on it is foolish.

>At least the corporate
>owners know about things such as outplacement and severance
>packages.

Very true. When I left ABC ten years ago my severance package was terrific. They gave me outplacement (I ended up helping the facilitator because they had no idea how to place broadcasters, but the intent was good), they gave me an office to use with no time limit and a very fair package of money.

In a small company you get the same treatment as the kid in the mailroom.

Actually, David, I did kind of pooh-pooh it. WOR was one of the very
first stations to webcast. I was the person in the company that made
it happen. I was also on the Globalmedia advisory board just before
they restructured and decided to specialize in video.

>Rich's point: it is not happening yet and when it
>does, the content providers will be the same ones we already know.

Exactly. Something has to drive ears and eyeballs to the net.
Broadcast media has been the most effective way to to do that. As
we've both said before, it doesn't matter what the delivery system is.
People care the most about content.

Actually there are a few stations around the country who are still doing
their own traffic, but they are very few and far between. Its cheaper and
much more simple for the stations to farm out traffic, weather, sports and
news these days than to actually hire someone.
There are those who are using their real names on the air, but they've had to
put up a fight to do it in most cases. For most PDs the idea of sharing and
helping to build credibility in a good traffic reporter or meteorologist with
any other broadcaster in the market is just too alien.

Why is it that there isn't one radio station,no matter where I go, that hires
its own studio traffic reporters? EVERY station I listen to uses traffic
services instead. (Like Skyview, Shadow,Metro Networks.)

And these same reporters use different names on different stations. I.E. here
in Phoenix, the person who is David Reed on the Clear Channel stations is Dave
Teller on the Emmis stations, and David Dorsey on 1190. Why don't these people
use their real names?!

And speaking of ownership, CBS recently bought KOOL, The Zone and Camel
Country... Why is it that none of the English language *AM* or *TV* stations
here(besides Fox 10,and Radio Disney 1580)are owned by their network; and why
is it that while it seems companies like Clear Channel own every station in
the
country, why is it that the networks can only own like 25% of the nation's tv
and radio stations,or something like that? Seems like you have to go to
NY,LA,SF or Philly to get a high percentage of O&O stations.

Actually, the Clear Channel stations here in Phoenix do use their own traffic reporters. They started their own service called Total Traffic a few months ago. Mark Jeffrey (KFYI, KGME) and Steve Ludwig (KFYI, KMXP, KNIX) are airborne. They also have ground-based reporters that are only heard on Clear Channel stations. They use the same name on all the stations as well. Although they are not particular to ONE station, they do work on the same stations day after day (as opposed to a lot of Metro's people).

KPAM, 860, Portland, OR All news/talk, all local.
Two dedicated, in-studio traffic reports (AM and PM)

There MAY be enough ODOT cameras out there along the major traffic routes in
the PDX area that most can be covered adequately. However, their traffic
reporting never has the "on the spot" feel of a vehicular, aircraft, or
helicopter reporter. Their reporting seems to be 99%, "yeah, there's the
same traffic in all the usual places"

My previous station (KXL, before they went dumb jock) once had their own
reporters, and then switched to the pool. But even the pool reporters had
the advantage of travelling to where the traffic news was happening. I never
really trust traffic reporting that relies on a few fixed cameras and
monitoring the emergency channels.

I noticed today that KAAM (770 Dallas) was running a promo about how "improved" the station will be, since they did away with their news department. I guess this is a classic case of turning a disadvantage into a new and improved "feature."

The spot, done by the station's General Manager, said they had discovered their listeners were "purists" who really listened to the station for the music. He went on to say, "If you want news and information, you know where to get it." I thought that was pretty interesting.

If the listeners are such "purists" I wonder why the continue to segue Benny Goodman with the Bee-Gees? Combinations like that are just plain wierd in my opinion, but they do stuff like that all the time. Their format is really that confused. I'm not saying either artist is bad, it's just that they are extremely different. If KAAM would just focus a little more on one genre of music, I think they would be very successful in the DFW market. The numbers might not be huge, but I suspect their listeners would be very loyal.

Just my opinion.

Speaking of rooftop antennas, here's a bit taken from Bob Feder's column
in the Chicago Sun-Times.....
****

Chicago radio's shifting alliances, ownerships and formats result in
some odd combinations. But none is stranger than the location of the
broadcast tower for WYPA-AM (820), the local outlet for One-on-One
Sports Radio Network: It's on top of the Belmont Avenue studios of
WSCR-AM (670), the rival sports talk station known as the Score.

****
WYPA is a 5 kw daytimer. They did have a CP for a 6 tower DA to add
nightime from a different site. The CP has been canceled.

I hate to bear the bad news, but, unfortunately the employer had a right to take that money out of the ex-employees account. When people sign up for direct deposit, there's a clause that stipulates the employer may withdraw money for the purpose of correcting overpayments. Unfortunately, there's no stipulation in the law that they can only take money for that purpose, or only the disputed amount. You sign it when you sign up. So I'd either not sign up for DD or don't keep much money in it.

Darren, I'm only suggesting you be aware of the logical structure of your argument. Here it is once more:

A group of baseball professionals are discussing the range of personnel strategies, field strategies, stadium strategies, marketing strategies, political strategies that they believe will maximize revenue for a team. Somebody walks up and says: hey guys, I like the Chicago Cubs, and the Chicago Cubs played day baseball in a small ballpark for many years, and sarcasm on, they're still in the league and people still come to games, sarcasm off.

That argument is a loser in part because it sets a pathetically low standard of survival in the past. It only becomes a potentially winning argument if, for example, you can demonstrate that the Chicago Cubs generated the greatest revenue for its market size, or won the most titles, or that building new ballparks consistently leads to a revenue drop.

Myself, I like back-announcing just as I like the Chicago Cubs. And I'm just a listener-groupie too. But I am long lost to commercial music radio. On the public stations I listen to, it wouldn't occur to producers to treat music as a commodity item unworthy of identification. But for a commercial station, whose sole purpose is to be a politically protected money machine, there is logic behind downplaying title and artist. One station can go as "the station that gives you the least talk and your favorite music"; another certainly might go as "the station that usually tells you which songs you just heard." But it will be a research-based positioning and revenue strategy, not an aesthetic preference. And future profit maximization, not mere past survival, will always be the coin of the realm.

Hey there - novice here!

I'm sitting here speaking in my Rode NT2 mic with a Focusrite Voicemaster right after into my pc (with Wavelab)!

But i have some problems finding the right crispy tune as the Voicemaster is supposed to do.

Does any of you know a setting that makes the sound full, deep and crispy.

Or do I have to equalize it more and put some plugs on it in my Wavelab to get the right tune?

Thanks.... Ian

In a way, ABC *was* doing that with WLS. In November 1980, WRCK ("W-ROCK"), the format that replaced WDAI's disco format, was ailing (I personally thought it was great--a sort of before-its-time hot AC). When Bob Sirott quit his morning show after only eight weeks on the air because he got a TV deal (the station went to WRCK in June, but Sirott had a no-compete clause from his last WLS contract that was being enforced, even though both stations were under the same owner!), ABC fired the GM, PD, some of the jocks and most of the sales staff and merged the stations under John Gehron. The FM calls became WLS-FM and they began simulcasting Lujack in the morning and Brant Miller at night. The rest of the time, they pretty much kept the same playlist on both stations (although the FM playlist had more album cuts--this was the era when the Loop was 'LS' chief competitor--WEFM was about to flip to Schulke II). In early 1981, Steve Dahl and Garry Meier were hired for the FM's afternoon drive after Heftel mysteriously fired them from the Loop (much of the chagrin of AM afternoon driver John Landecker). And when jingle packages changed in 1981, both stations had the same jingles--the JAM singers just sang either "AM 89" or "FM 95" (and later, "94.7").

Things went well until WBBM-FM went "Hot Hits" in 1982 and became the first CHR in Chicago to beat 'LS in the ARBs for more than a book or two (by that time, they were B96). At the beginning of 1985, to celebrate the station's 25th anniversary as Top 40, the decision was made to make the AM personality-intensive and the FM music-intensive, so Steve and Garry were moved to the AM afternoon drive and simulcasting stopped completely. The FM also changed jingles to the JAM "Flamethrower" package. The next year, the calls of the FM changed to WYTZ (Z95) as on the AM, Lujack moved to the

afternoon, Fred Winston to mornings and Steve and Garry got fired for audibly protesting being moved to middays and refusing to follow format. At the time, it seemed like ABC felt that WLS meant nothing to the current CHR audience who had switched their affections to B96.

After that, Z95 was competitive with B96 until B96 made the decision to go from mainstream CHR to churban. That, combined with the Paul Barsky firing I mentioned in the earlier post, made the two stations farther and farther apart from each other in the ratings. By the time the events I described in the previous post occurred, there was simply no way that ABC could sustain a CHR in Chicago--and thus began a long dry spell for 94.7 that continues to this day.

I believe the Mexican that KLIF protects is the Guadalajara station, XEWK.
1190, 50 kw, DA-N when I visited it.

X-tra Sports "in San Diego" is indeed XETRA, Tijuana, Baja California
Norte, M&#65533;xico.

Attention owners (CC, Infinity, or whoever) of KEYI FM in Austin TX,
don't you guys actually listen to your station? Or check that the sound
over
an older mono radio sounds decent? I'm listening to them on a mono set,
and
when the stereo separation (checked with a stereo set) gets rather
excessive,
mono sounds like crap. Like it's getting cancelled out. Maybe a
separation
control on the optimod is set to max or something....

Otherwise it's a reasonably decent oldies station.

All Mexican AMs start with "XE" while FMs use either "XE" or "XH" with the former being grandfathered but no longer issued.

The one 1190 Dallas protects?
>>

1190 now has only two Class A stations ... KEX in Portland, which is 50 kW DA-N, and XEOY (?) in Guadalajara, Mexico, which is 50 kW ND day and is "grandfathered" at 10 kW ND night (one of the few remaining "grandfathered" Class As).

WOWO is no longer a Class A, but the Dallas array is designed to protect WOWO as if it was a Class A, and that fact is not likely to be changed without major modifications to the 12-tower night array.

"Jeffries, Mark" <MJeffries@KRW.com> wrote an excellent summary of what happened with WLS AM & FM in the 80s, and not once did he have to blame anything on "corporate bean counters". (See, Drew? It can be done!)

As a former (pre-Disney) ABC employee, please allow me to supplement briefly.

1. With regard to the substantially correct info in Mark's first paragraph, even there one need not look to "corporate bean counters" to explain what took place. What happened was a political power struggle, nothing more, nothing less. John Gehron won, and WRCK was euthanised.

2. The strategic decisions mentioned in his second paragraph were also local. Again, contrary to the conspiracy theorists in this newsgroup, it did not take "corporate bean counters" to make certain mistakes.

3. In my opinion -- as local listener, professional observer, and occasional participant -- there is one critical factor to add to Mark's third-paragraph summary of the events of 1986 and beyond, in which he had written:
> "... B96 made the decision to go from mainstream CHR to churban."
> "That, combined with the Paul Barsky firing ..."
The other factor, over and above (a) the Z95 morning show deterioration and (b) B96's gradual musical repositioning, is that Z95 was simply a less well-programmed station in that era. Simply stated: quality can win.

It did.

Jim

And the reason for the stick being where it is was because that was the transmitter for WSCR when they started up--Diamond Broadcasting put the stick next to the 1kw day/250 watt night WSBC stick (also owned by Diamond). Seems as though after the Score moved to 1160 AM, Douglas, Radio Unica and Catholic Family Radio just used the same transmitter (all as WYPA--Douglas changed the calls and ran the Personal Achievement Radio all-motivational-speakers-all-the-time format).

The previous occupant at 820 AM, Century's WAIT/WCZE/WXEZ-AM/WPNT-AM, had a transmitter facility out in Elmhurst that was also the station's studios until Century moved them into the Hancock. I assume that suburban development had that complex demolished a long time ago.

Date: 2001-03-24 12:08:52 UTC
From: Gary Schnabl <badBadger@badBadger.com>
Message-ID: <tbp3ik8tmr58ce@corp.supernews.com>
Source record: 14927

Effective tonight, CKLW (CHUM Group) cancelled the "People Helping People" drug addict progam off its schedule. It was supposed to go on until the Saturday night (Sunday AM) program, but it went off Friday night after a 6-year run. CKLW gave the program's host, Mark Elliot, notice a day ago in order to minimize any call and write-in efforts to save the show.

Since his contract expired in January, there are no expectations that the show will be continued. However, Toronto runs a similar live program from 8 to 10 PM (640 KHz?) with high ratings, according to Elliot. Also MarkElliot.com has streaming audio for archives of past programs.

The program would sometimes clash with Art Bell's program on certain nights of the week. Perhaps good old Art flexed his muscle to pull this show...

RadioWeb is the website of the Radio Broadcasting Instructional Program at Miami Lakes Educational Center, part of the Miami-Dade County Public School's Adult Education Department. The website is operated as a public service for job listings. There are no passwords needed, no advertising and your job listing is added immediately upon posting.

We only ask that only radio related jobs, and those that are currently available are posted. We do not accept "jobs desired" listings or non-radio jobs. We reserve the right to remove any job listing for any reason.

Visit RadioWeb at http://www.miamiradioschool.com/joblist.html

Click the link at the top of the page to "Post An Available Position" and fill out the form, then click the button at the bottom of the page that says, "Submit Job Listing". That's it.

Your job listing will be posted immediately and seen by an average of 500 different people per week. Give it a shot.

Terry,
I believe you're sincere and I appreciate the compliment. In the
heat of newsgroup discussions we sometimes let the fact that there are
people behind the words get set aside. In retrospect, I was probably a
little too harsh on the personal side. For that, let me apologize.
While my views of LPFM remain the same, I'll take a more careful look
at the motivation of the people behind it in the future.

Thanks, again.

Rich

From: http://www.radiocaroline.de/

Newsbeat : Friday March 23rd 2001

Radio Caroline are pleased to announce that they have entered the world of digital satellite broadcasting.The station's output will be available from the 1st May 2001 on the Astra digital platform at 19 degrees East. Broadcasts will emanate from the current uplink facilities at Maidstone in Kent.

The transmission route will be via the facilities of UPC who uplink a digital TV and Radio bouquet including the Polish broadcaster Wijza TV, whose digital TV and Radio broadcasts have emanated from the Maidstone Studios for the past three years. We look forward to a successful broadcasting relationship with them. In addition, we would like to thank our present broadcast facility provider Flextech for providing analogue facilities over the past two years.

The Astra 19 East digital platform is the home to over 600 Digital TV and radio channels directed at homes throughout Europe. Full technical details of Radio Caroline's digital satellite broadcasting frequency and tuning parameters will follow shortly.

Radio Caroline is also currently actively pursuing negotiations in order to obtain an additional competitively priced broadcasting outlet at the 28 degrees East orbital slot. This is the home of Sky Digital and the new Eurobird satellite.

The station's analogue broadcasting output will cease at midnight on Saturday 31st March 2001.

I don't know what kind of study the folks at KAAM did, but I suspect they'll change their minds in a while. I think the listeners of KAAM are far more interested in news than they realize. Indeed, the listeners DO know where to go to hear news - and I suspect that after a number of them have gone there and quit marking down KAAM for a few 5 minute periods in their diaries, KAAM will fall below a 1 share again.

"Stage Left" is an internet radio show bringing you a lively and eclectic mix of music, comedy and spoken word from the stage and screen. It's produced at the studios of community radio station KDHX-FM in St. Louis, Missouri, USA.

The latest edition of the "Stage Left" webcast went on line Wednesday (the 21st). This week the subject is "Sing a Song of Oscar". The show features music from Academy Award-nominated scores: "Gladiator", "Chocolat", "The Patriot" and "Courching Tiger Hidden Dragon". There's also an interview with Michael Lanning from the touring company of "The Civil War" along with music from the show.

Listen to it at your convenience at http://www.kdhx.org/real/slcurrent.ram. The playlist (with lots of background on the music and useful hyperlinks) is available at http://www.stageleft.org.

You can also get both the current episode of "Stage Left" and last week's show at http://www.stageleft.org or at http://www.kdhx.org/listen.htm We'll be archiving a month's worth of shows.

Next Week (3/28): "Forward Into the Past!" - a bunch of new releases with a retro twist: the London cast of "Mamma Mia!" (based on the songs of Abba), Liz Callaway's new CD "The Beat Goes On", an album of Broadway tunes by '70s fave Donny Osmond and Pete Rugolo's score for the '60 TV series "The Fugitive".

The manager's name was Crawford, as in Crawford Broadcasting.

I actually showed my "radio groupie" side the other day. It was the second time in 53 years I've ever called a DJ who was on the air. (Other than some who were working for me). The last time as a listener was about 1963. The recipient was Jon McCoy at KAAM. I called to ask him why he just played Glenn Miler segued with Bread. He is after all their PD, as well as the "morning guy," so I figured he should know better. In mere seconds it became instantly obvious where the problem with the station lies. He said that he HAD to play stuff like that telling me "That's how you get listeners." Funny, it makes me want to instantly find another radio station....

I didn't think much more of this incident until a couple of days ago when my 73 year old Mother-In-Law was talking about the music she liked, suggesting I might give KAAM a listen. She warned me that KAAM will play a couple of really good songs, followed by one that absolutely "stinks." (Her word). When I questioned her about what she didn't like, she said: "Oh, that 60's & 70's stuff like the BeeGees, The Carpenters and that other soft rock stuff. It just doesn't belong. They should be playing Fank Sinatra."

I nearly fell over....

I've only known this lady since 1968, but I never knew she was a music critic. Maybe she should go into programming.

Let me just express my condolences regarding the WOR situation. Yet another
great "radio person" gives up the front door keys. I kow that we've went
round and round in here about broadcasting corporations and disagree on our
views. I guess I probably have a lot of bitterness because of my career
becoming derailed due to consolidation.

Please understand, I love radio and have since I was a kid. Having worked in
AM back when it was "cool" was a gas! I know that I'll probably never
experience anything like that again in my life. I tend to get very upset at
what has happened to this fine field in general. The quality is gone... it's
all about "quantity" now. If my postings tend to offend you, it's not
intended.

Best regards.

Johnny

From the radio-info.com site...Orlando board

Name: Radio-Info Administration
Posted on: March 23, 2001 at 23:18:36
Subject: No More Bubba

''24.4.252.64''
writes:

We've gotten a little too lenient here lately since the boar incident
was somewhat newsworthy. But things have gotten out of hand again. The
same people who forced us to close the Tampa board are once again back
at it here. It's no longer going to be tolerated.

Oh and SDL and Jersey go and cry censorship all you want. You're
fighting a battle you're not going to win with us. I suggest you find
another site to pester with your inane comments. Deal with the way we
run our site in the best interest of our readers. If you don't like
it, don't read the board or post here.

Oh by the way, Bubba is not heard on any Orlando radio station.

Evidently, anything that is not complimentary towards Bubba is allowable
on the board, since the moderator is afraid of being sued (he has never
heard about Sullivan v NY TIMES). And as Riley pointed out recently and
mention of a certain WDAE host is not allowable as well. However, you are
encouraged to blast all non-Clear Channel properties on the board.

Sad state of affairs when opinions are censored for fear of legal action...

I beg to differ. People still think of radio as something that is part of
their lives and their community. It's supposed to provide local headlines,
jock chatter about LOCAL stuff (car show on hwy 5 tonight, etc) and a
selection of songs they like. A lot of people I know of don't like certain
stations because they "don't ever talk about local things".

The loss of a local element is the biggest nail in the coffin, IMO.

>"improved"
>the station will be, since they did away with their news department.

I miss the good old days when everyone did news-- even the Top 40 stations. I grew up in South Texas picking up 20-20 News on KILT in Houston and KTSA in San Antonio.

I believe it made for more imaginitive programming when you had to work it in somehow. I recall Captain Jack doing news with rock and roll music beds at night on KILT.

Plus, think how much more knowledgeable folks would be today if their favorite music station had also been doing hourly news all this time.

No not hardly....but the pattern is very tight thru downtown..on
the north side near Addison/Galleria, 1190 fades in and out...
In fact, I hear a lot of Mexican music under it at night...kinda
adds a whole new flavor to Fox Sports! :)
(BTW it was Commerce street not Elm...the old KLIF studios were
on Commerce ;)

BUT once Clear Channel actually owns the station, I would possibly look
for a change in the pattern....KEX is also owned by Clear Channel..
so any interference caused by a change in the pattern will not be
objected to if there was another owner involved...WOWO is no
longer a 50KW station....and their pattern has also changed...
so there is a good possibility that Dallas's 1190 may get a new
night pattern...in fact, there WAS plans to run the DAY site at
5 or 10kw nights....but there was a unbuilt Canadian allocation
that killed the idea....I don't think that allocation is on the air
anymore....(and Gawd, I would love to only have one tower site to
worry about...but then I like the Rockwall site...its cleaner
and dryer than the Irving site....wish the 50KW day could move
there and just beam WEST :)

Chris

Radio Caroline was too sucessful.The nonstop ratings slide happened when the state broadcasting monopolies either were broken up or decided "If you can't beat em,join em1" In the era of listener focused FM, why should Radio Caroline stay on top?Many of the potential listeners today are as familiar with the history of the station as they are with Model-T fords.

What/where is the unbuilt Canadian allocation? I assume that the plans to run the day site at night involved different current ratios and phases in the towers to achieve a different pattern at night? I have no idea of what the protection requirements for WLUV might be, but I plugged a few numbers into my HP hand held calculator, and quickly came up with a "bow tie" shaped nighttime pattern that does a pretty good job of protecting the Canadian border, as well as XEWK in Mexico. The biggest problems seem to be protection of the southern portion of KEX coverage area, and the Northern portion of the XEWK coverage area, plus of course whatever might be in the way of the new nighttime lobe to the East, that using the daytime array creates. It seems like Canada would not be the major problem with using the day time array at night, assuming one wasn't trying to use the daytime pattern unchanged.

>>

KEX has already opened its pattern up towards the east (and towards WOWO and Dallas), and that change must be protected. I see no reason for KEX to return to a tighter pattern just so a marginal operation in Dallas could make a pattern change.

The Guadalajara Class A will be the limiting factor on any changes to 1190 in Dallas, in any case. And that Class A has changed from 10 kW nights to 50 kW nights.

The changes to 1190 in Kansas City (from 0.25 kW to 4 kW, nights) will also limit any changes in Dallas.

Basically, I see 1190 in Dallas as being able to make minor, not major changes.

Perhaps a reduction from 12 towers to 10, at best ... but the second row of towers will still be required to protect Guadalajara and Ft. Wayne/Kansas City.

Hi Johnny,

I think you got Davids point backwards, either that or I have, it's
happened before. You seem to be saying the dom coms are the "content
providers we already know", and if they can hang in there will be the
content providers when and if webcasting really happens. I read Davids
comment as meaning that the content providers would be those we already
know in the radio and media business, not the dot coms.

Who's got it right, I sure don't know.

When growing up, I use to see the KLIF auxillary transmitter site off of Scyene Road. Though now the area where it once stood is now gone.
Also a few blocks from where I lived there was the transmitter for KIXL 1040 on Millitary Parkway and Forney Road, it is now gone but the site still has the building that once was used there.
Also KSKY 660 use to have their site at Lake June and Jim Miller on what looked like farm land. At John B. Hood, KSKY could be heard on the telephones when trying to make a call. I am not sure where KSKY has their transmitter now, but the place on Lake June is now vacant.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

I posted this the first time back in December.

==========>>>>> BEGIN ORIGINAL POST

I have a sizeable number (approx. 100) of Beta hi-fi video cassettes containing recordings off the air of EZ broadcasts from the late 1980's. The tapes contain hi-fi stereo audio only, no picture, they play on a normal Beta hi-fi VCR with the sound coming from the L and R audio jack. The tapes are slightly longer than 4 1/2 hours each, and are uninterrupted recordings of what went over the air including announcers, commercials, etc, recorded at various times of day. About half of the tapes are of KMEZ-FM Dallas from late 1988, the other half are from KOOI-FM, Tyler-Longview, TX from 1989. Also, there are 4 tapes from KBRD Seattle from late 1990. The tapes from KMEZ Dallas were made shortly before that station abandoned the format (taped off the 100.3 station, which changed format at the end of 1988, the KMEZ call letters and format moved to 107.5 for about a year after that before it went away). The air personalities include Tim Kase, Ken Loomis, Bill Woods, Pat Ross. The tapes from KOOI are mostly from the nighttime when the station was automated and include hourly newsfeeds from ABC. The music mix is about 25% vocal, 75% instrumental recordings of popular songs.

I am not really interested in selling these but trading them for other recordings of instrumental EZ music which can't be bought (CD's, 10-inch tapes, etc.) especially if they are from the earlier 1980's or from syndicators others than ones used by KMEZ and KOOI. Email me. Also, I have a partially working Sony beta hi-fi VCR which needs minor repairs (it plays fine but may take a few attempts to start) which I no longer need. If there are no takers these tapes will probably show up in Salvation Army thrift store in Dallas in a few weeks.

=====>>> END ORIGINAL POST

I did receive one reply from someone in Canada (I have not forgotten, I was just busy with the holidays and other things). The main thing is that I don't want the tapes to go to waste. The deal is I will divide them up among interested parties, I don't mind paying for shipping them, if you will agree (honor system) to give a comparable donation to worthwhile charity such as the Salvation Army. Also, please discuss or say thanks on the newsgroup and offer to pass them around to others who might be interested.

Also, I believe the beta VCR is probably beyond repair now, since it needs a new reel drive motor and it's highly unlikely that Sony still has the part. You would need your own beta hi-fi deck (or a regular Beta which would play them off the linear audio track with pretty poor sound quality).

The motor does not run with enough power to keep the takeup reel turning and it frequently shuts down when playing.

I also copied a handful of the tapes into the computer and made them into MP3 files. I could slip a couple 9-hour CD's in the mail if someone is interested. You would need a reasonably new computer with a soundcard and a free program such as Winamp 2.6 to play them.

Does anyone know of any websites devoted to EZ music? There's the EZ channel on the DSS satellites on 833 but they kind of keep recycling the same songs over and over I wish they would expand their playlist.

Of course that's just your interpretation of Johnny's interpretation of David's interpretation of Rich's position.

Whatever they meant, they said it right. Audio content will flow as naturally as text and pictures from content providers we already know. But they won't primarily be the content providers we associate with radio. They'll be newspapers, magazines, university departments, foundations, medical labs, performing arts organizations, public relations firms, museums, sports teams, music labels. Anyone with content to promote or repurpose, and government-anointed middlemen to bypass.

>>
It seems like Canada would not be the major problem with using the day time array at night, assuming one wasn't trying to use the daytime pattern unchanged.
>>

Canada has no Class I priority on 1190 as 1190 is a U.S./Mexican clear channel.

Right now, WLIB is protecting a "notified" Canadian station which has not operated in ten years, but WLIB is a Class II station, not a Class I station (and neither is/was the Canadian).

So, Canada holds a "trump card" for at least one changed U.S. station (WLIB).

Any change to KLUV would likely have to provide protection to any "notified" stations ... U.S., Canadian or Mexican ... of the same or higher class.

If you start out with a figure-8 pattern that protects the two existing Class A stations (KEX and XEWK) and then add backside cancellation to protect those "notified" stations to the northeast of KLUV (Kansas City, Ft. Wayne, New York City, and the now dark Canadian on PEI), you will get pretty much the same pattern as now exists.

My guess is the current 12-tower array could be reduced to 10 towers.

Are you saying your Hi-Fi Beta gave up the ghost before you could copy all those tapes to MP3? How horrifying. For the cost of a movie, your closet full of tapes would have been reduced to shoebox size, archived in a format that would permit full access, enjoyment and exchange until the end of time. People make fun of EZ, but it's actually amazing music, as you know. I think that more important than clubbing up with EZ fans is clubbing up with the remaining Hi-Fi Beta owners, pooling parts to preserve the remaining machines and attempt a lend-by-mail system for people with unique content to archive.

One place to start would be the Dead Media Project. This page...

http://www.deadmedia.org/notes/index-cat.html

has fascinating notes on many hundreds of dead media forms. I hope you make friends with some other Hi-Fi Beta die-hards...as you say, ordinary Beta won't do...and ditch the tapes while preserving the music.

Isn't that just 99% correct? IIRC, US stations only need to protect
Canadian stations starting at the Canadian border. They can interfere
all they want to Canadian stations' coverage inside the USA. I doubt
that this would have any effect on a Dallas staion.

1566. New STAGE LEFT episode available on the web

Newsgroup: rec.radio.broadcasting
Date: 2001-03-30 04:41:15 UTC
From: thedoge@swbell.net
Message-ID: <tc83jb4sb9f247@corp.supernews.com>
Source record: 14977
Cross-posted to: rec.arts.theatre.misc,rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.kdhx.org/listen.htm and check out the playlist at http://www.stageleft.org

The latest edition of the "Stage Left" webcast went on line Thursday (the 29th - a day late due to technical snafus). This week the subject is "Forward Into the Past!" (with apologies to the Firesign Theatre). The show features new releases with a retro spin: the London cast of "Mamma Mia!" (based on the songs of ABBA), Liz Callaway's new CD of '60 hits "The Beat Goes On", a new Broadway CD by '70s fave Donny Osmond (there's even a duet with Rosie O'Donnell, a sure sign of the apocalypse) and Pete Rugolo's jazzy, Stan Kenton-esque score for the '60s TV series "The Fugitive" (digitally remastered but still in Glorious Living Mono).

You can get both the current episode of "Stage Left" and previous weeks' shows at http://www.kdhx.org/listen.htm We'll be archiving a month's worth of shows.

Next Week (3/28): "24 Hours of Lovin'" - an unabashed celebration of the erotic on the stage.

May I respectfully suggest that the recent decisions by major league baseball and the NBA point to what's more likely to occur, namely charging for the more desirable portions of audio or text. The problem for such providers though is that many folks will not spend the money required to make such operations gold mines. Cable and the satellite services probably make the most profit from the alternate services they provide like pay per view and HBO/Showtime et al, but they can't survive without the basic packages providing some revenue stream. Until ISPs make money from broadcasting, the little $9.95 per year or month charges will only attract those with a real desire for the product over the internet. I certainly miss the days when I could follow the teams I grew up rooting for via AM radio, but internet broadcasts of their games now leave me cold and I won't spend more money to follow said teams. That's the real problem for any provider of content on the internet, it has to be really worthwhile or attract a large audience that advertisers will pay to reach. Either way, the market is extremely limited if just because the number of people willing to pay is so small and likely to remain small in the foreseeable future. It's why the free ISPs have dwindled away too.

I'm just saying that, regardless of who the providers are, when it comes to
internet "broadcasting" there's some hard times ahead. The
"commercialization" of the internet has started to make people "cut the

cord" now, leaving the net as they are sick of all the crooks, viruses, hackers and scammers. I believe this has had a great impact on all the "dot com" failures... people are slammed with advertising every minute of the day and are REALLY getting sick of it. The internet is just more of the same.

Heh... they don't like him or "respect" him there either! BTW, the majority of people over there would actualy rather discuss shortwave radio broadcasting in general) radios, DXing, stations heard) than discuss Hal's show, but he tends to get killfiled a lot because, as he says, "everyone I want to listen to me already are", thus offending those "non-elite" of the Hal Turner Society!!

What I don't understand is, if "his listener's" are already listening, then why does he bother to post all this spam all over usenet? Must be to irritate his "non-listeners"....

As the station celebrates its 37th birthday this is from:
http://www.radiocaroline.de/

Friday March 30th 2001

Mark Stafford's News Report
So, we have finally reached the day when Caroline leaves the world of analogue and heads for a digital future.

But, we intend to go out in style. The whole of Saturday will feature special programming. During the main part of the day we will feature double-headed shows from the main Radio Caroline presenters. In addition, they will be featuring their favourite Top 10 songs of all time. So, at last you can see exactly what songs they really like. It should be interesting.

But, the highlight of Saturday has to be the closing two hours from 10pm until midnight. This will be hosted by one of Caroline's "All-time Greats" Tony Allan. It will be wonderful to have Tony back and a fitting end to our stay on the Astra analogue platform.

Here's the scheduled line-up:

Saturday 31st March 2001

08-09 am Caroline's Berlin Service with Claus Grote (programming in German)
09-10 am Martin Fisher
10-12 am Andrew Austin & Steve Bishop
12-02 pm Tony Christian & Mark Stafford
02-04 pm Alex Hamilton & Dave Foster
04-06 pm Rob Ashard & Barry James (with "Side-kick" Steve on Tea-making duties !)
06-08 pm Nigel Harris & Johnny Lewis
08-10 pm Bob Lawrence & Graham L. Hall
10-12 pm Tony Allan

All times are UK time. Add one hour for European Summer Time.

Almost immediately after we leave the air, the studio will be the subject of some much needed maintenance. This is in preparation for our launch on digital on the 1st
May.

We explained all about that last week, but let's just recap on a few important points:

1. Caroline will re-open on the 1st May broadcasting on the UPC Digital platform on either the Astra 1F or Astra 1G satellite at 19.2° East.
2. We will have this output 24 hours a day, seven days a week.
3. This is not 28.2° East, where your Sky Digital dishes are pointing.
4. We are still awaiting our exact frequency etc.
5. We are continuing to negotiate for an outlet on 28.2° or 28.5° East.
6. We also continue to negotiate with the Worldspace organisation.

If you are in the UK you can get more news direct from Peter Moore by calling the UK premium service news line on 0906.7669990. Calls cost 50p a minute but the income goes in to the Supporters Group bank account.

This is a crucial period for Caroline and achieving Sky Digital will need your financial support. This can come in many ways. One way is to buy the brand new video put together by Rob Ashard in conjunction with the Caroline Sales team. Details are as follows:

"Once, Twice, Three Times A Lady", - a Caroline Sales Production. Running Time 1hour 15 mins

Contains footage from 1995 RSL at Canary Wharf including studio footage and interviews with Chris Kennedy and Tom Lodge with studio output sound for the on-air sections. Tom talks about life with Caroline in the 1960's. Other interviews include Andy Bradgate talking about the transmitters and studio equipment, John "24 volts" about the ships engine and electrical systems, and Howard Beer tells us about keeping the generators running at sea.

This is followed by 14 minutes of colour film with sound shot around and on-board the Mi Amigo in September 1978.

We finish with many of the current presenters on-air at the Maidstone studios with high quality stereo studio sound.

Cost £12.99 inc P+P plus a voluntary subscription to the Caroline Support Group (a mandate form will be included with the tape). Existing members feel free to donate an extra £5.00!

Send cheques to:

Caroline Sales
148 Grange Rd
Ramsgate
Kent
CT11 9PR

The recent survey has now reached the magical 2000 number. It's still not too late to do your bit though ! Follow the link further down the page. The survey confirmed that the majority of listeners wished Caroline to remain with a rock music based format, which was good news to my ears !

I am sure that you will all make an effort to catch the programmes on the last day on analogue on Saturday. You can catch me and Tony while you are enjoying your lunch ! But, don't forget the highlight comes at 10 pm with the very welcome return of one of my "radio-heroes" Tony Allan.

As always, if you want to get in touch with me it's mark@rblradio.co.uk or you can always find me lurking on the new Radio Caroline Newsgroup at http://groups.yahoo.com/group/RadioCarolineMailinglist
We have recently been joined on that by a few Caroline presenters, past and present Tony Allan is there along with Martin Kayne (who was on Radio Caroline North in 1967) and Paul Rusling (Paul Alexander on Caroline in 1973) and our very own Tony Christian is there as well. Why not drop in and say hello.

Talking of former Radio Caroline presenters, this week saw the release of former Caroline man Chris Cary (alias Spangles Maldoon) from his recent detention. The good news is that Chris appears to be on his way to recovery after his recent serious illness. We wish him a speedy recovery.

Speak to you on Saturday for the last time in analogue, before they convert me into ones and zeros in order to become a digital stream for you to receive !

Until then,

Best regards
Mark Stafford

Well, that makes sense. And by then people will be tuning into stations like WADS for "one great spot after another", where the announcer occasionally says "we'll be right back with twenty great spots in a row, right after this quick song, sponsored by Warmer Entertainment Group and all six locations of Thelma Thatcher's Record Shack"

Oh, how I pray for a stroke before my ears ever hear that!

The problem is people are SICK AND TIRED of ADVERTISEMENTS!!! Once something hot on the net COMMERCIALIZES or starts to charge a fee for access, users bail in droves.(read:napster) The notion that "ANYTHING will sell ads on the net" is idiotic. Most people don't even notice banner ads and such anymore... they just blend into the background.

Wall street has so saturated the world with advertising that people have drawn the line. People are so over--saturated with advertising that they are starting to just "block it all out" mentally. A few of my friends with whom I have been online together with since the old BBS days have decided "enough net advertising is enough" and have just *deleted* their web browsers completely (and love it) and now just use IM or email. They've almost got me convinced to do the same.

So, advertising is the same whether it's radio, TV, print or net. People are just burned out by it. How many commercials do you think anyone actually LISTENS to if they have control over it? Very few, and the "entertaining" ones at that, which tire after a few times.Other than that, it "button-pushing time" when the spots start.

If one doesn't have any control (office radio), then all those spots generally just turn into "background noise" as the workers are generally too busy to really LISTEN.

When was the last time YOU ran out and bought something besides a Whopper combo because of a radio commercial? Listeners are really tightening their belts and are becoming VERY scrutinizing because of crooks who have presented something "too good to be true" and ran with the money.

Think about it... they're now putting advertisements on private automobiles and the greedy bastards on Wall Street are actually thinking of printing ads on TOILET PAPER, if they aren't already!! Is there nowhere to escape?

Not sure where we disagree, if anywhere. I think it's absolutely certain that audio and video follow text and pictures into broadband; that the tools for producing and disseminating this content have been democratized; that most of the content is too specialized for mass radio and TV; that newspaper content is extremely expensive to produce and will seek out major repurposing opportunities such as car audio on the wireless web; that streaming is cheap enough to do casually, which is why people do; that web-based audio sharing is unstoppable; that web content is much more profitable than most people realize; and that people like Rich Wood will prosper by helping any institution with a message to get out do so in audio in a compelling way.

Sorry I can only give you the rapidfire executive summary of this argument right now....

Jerome

Source record: 14995

I was reading another radio ng, and came across an interesting thread... this was it. Here is one of my favorite stories (true, I may add) Please add yours!

The one I got in the most trouble for was back in 1990 or 91 at WBBN-FM (B-95) in Laurel/Hattiesburg, Ms. (then market 189). I had the #1 by far morning show in the market with a 30.2 12+ so needless to say a huge ammount of listeners.

If you are familliar at all with the University of Southern Mississippi (Brett Favre, Michael Jackson, Clarence Weatherspoon at that time) They are located in Hattiesburg, Ms. My news/sports tease I teased a MAJOR ANNOUNCEMENT about USM Sports which is by far the biggest thing around.

At the top of the news I announced that USM had fired their head basketball coach M.K. Turk after a first round loss in the NCAA Tourney. Turk had gotten the Golden Eagles to their FIRST Tourney ever, and had won the N.I.T the previous year. I went a bit too far with this, calling for the resignation of the A.D. at the school, and cued up and played some really (I thought obvious) phony actualities!!! Then I opened up the phones and played listener responses for the next 40 minutes in between songs and at stopsets. Needless to say, the phone lines were jammed, and I was diggin' it.....so much that I didn't see the HOTLINE ringing off the hook Well, when the station owners wife, who was also the sales manager came flying into the studio wearing SWEATS and a T shirt, I knew there was trouble!!!!!!!! It seems that not only the A.D. from USM, but the SID (sports info dir.) AND Coach Turk were avid listeners of mine!!!! After about a week of on air sucking up to the school, and a lot of FREE "PSA's" I was eventually allowed on campus again, which was a good thing, because Hattiesburg was hosting a regional TOURNEY for Baseball, and I was contracted for a decent ammount of scratch to STRING For three radio networks, and do play by play for one particular school whose p by p guy had recently been hospitalized.

Was it worth it???? HELL YES...the "did you hear what Charlie said this morning" campaign was a huge success!

RC, aka Charlie Darren

It'll get more popular with more broadband and always-on access being made available. Who wants to tie up their phone just to listen to the "radio"?

Of course, a reliable wireless internet service, with enough bandwidth, would really turn everything upside down...

> The
> "commercialization" of the internet has started to make people "cut the
> cord" now, leaving the net as they are sick of all the crooks, viruses,
> hackers and scammers.

I haven't heard of anyone totally quitting using the Net, although people might have cut back. The viruses you can avoid by not running unknown attachments and stuff, where as the "Make Money Fast" and "Get Viagra Free" hucksters can be ignored or filtered. The hackers/crackers/virus writers are like grafitti artists in town...an annoyance that will probably never go away entirely.

> I believe this has had a great impact on all the "dot
> com" failures...

Perhaps, although most of those companies had shaky business models, and spent cash on the wrong things (foosball tables and fancy furniture), rather than providing products and services.

Also the dotcoms wrongly thought that they could go on losing money for years until everyone "got with the program" and did most of their buying over the Internet. That didn't happen soon enough to save most of these companies.

> people are slammed with advertising every minute of the day
> and are REALLY getting sick of it. The internet is just more of the same.

I think 95% of people have just learned to tune it all out. Just like with the militia whackos and other so-called "activists" filling the news every night with calls to action for this and that. As long as people's lives are relatively

comfortable...there will be no jihads against anything in this society, whether it's "black helicopters" or ads above the urinals...

Why do you continue to play footsie with this guy? If the facts are as you say...the non-compete is "not enforceable" and he continues to use this as a means to keep you from working for a competitor...find a competent attorney and take appropriate legal action against your former employer. You'll likely get more $$$ from a legal settlement than you'll ever see working radio in Joplin, Missouri.

The NDD tower put up by NBC for WRC 980 Washington [in about 1936] has a top hat. It is said that tower height was limited by the nearby airport - which has long-since become housing. There are 2 shorter towers on the site that are also part of the night 5 kW DA - and the 3 of them are now used as a day DA with 50 kW, vs the old 5 kW day and night. I'm not sure what the 980 calls are this week. Probably different next week (honestly). Bob C.

>>

They're e-v-e-r-y-w-h-e-r-e .

Just look in the FCC data for stations with vertical radiators classified as Sect 1.

Sect 1 represents conventional (i.e. non-sectional) top-loaded radiators.

Examples near NYC ...

WFAN/660-WCBS/880 uses a top-loaded radiator.

WNEW/1130 used top-loaded radiators at its old site.

For sectionals ... Sect 2 ... it is possible to top load the top section (KNBR), the bottom section (KDKA), both sections (none known) or neither sections (most examples).

1597. Re: Who cares about call signs besides us?

Newsgroup: rec.radio.broadcasting
Date: 2001-04-01 23:23:58 UTC
From: Andrew Bayley <andjb@netspace.net.au>
Message-ID: <tcfe4e6jbq3bfb@corp.supernews.com>
Source record: 14859

In Australia, the use of official callsigns on-air has been diminishing for some time. Recently, the national Government-owned ABC (which runs a national TV network ABCTV, plus five national radio networks - Radio National, ABC Local Radio, ABC News Radio, ABC Classic FM and Triple J FM) removed all 'callsigns' from their network of local news-talk stations and replaced them with a generic "<frequency number> ABC <city>" title.. (eg. in Melbourne after 75 years on air, 3LO has now become "774 ABC Melbourne").

Regional FM stations, due to networking, are now taking on generic on-air titles such as "Star FM", "Hot FM", "Mix FM" and even "Easy Listening Australia".

In Melbourne Australia, the latest 'callsign' to disappear is low-rating commercial station 3AK which earlier this year moved frequency from 1503 kHz to 1116 kHz. It was reported today on http://www.theage.com.au that 3AK will become "Talk 1116" very soon.

>to
>get out do so in audio in a compelling way.
>

Actually some of the most heavily used sites like that of the NYTimes probably
can make money with advertising IF said advertising can be put in a form which
attracts the attention of the potential audience.

The real audio servers actually have an advantage, not only must a real IP
address be provided to get the content reliably, but checking whether the same
license is in use twice is also easy. I suspect for some providers, it will
work, but it's narrowcasting and only profitable if an awful lot of niches
actually exist. The other problem is that such narrowcasting needs to attract
the attention of a wide audience just to reach that niche, and I note that Real
Networks has yet to figure out how to get most of its customers to pay for the
player despite its popularity.

I'm not sure where we disagree either, but I do note that somebody has to pay
for content one way or another. The advertising model worked a whole lot
better when there were fewer outlets to advertise on, whether discussing
newspapers, radio or magazines. There are more magazines now for example
competing for the same basic set of advertisers, just as there are more radio
stations competing for the same basic set, and TV stations competing with
networks, local cable providers and national sources like Time-Warner/AOL.
That's one of the reasons that so far the advertising model hasn't worked on
the internet, advertising works best when repeated and it's attention getting.
Subscriptions have several strikes against them until the cost is reduced to
some nominal fee. If a game interesting to a fan, that fan might pay one tenth

of a US dollar to hear it, but probably won't pay $9.95 to hear 200 games in a month.

<johnnyneutron@juno.com> writes:

>The problem is people are SICK AND TIRED of ADVERTISEMENTS!!! Once something
>hot on the net COMMERCIALIZES or starts to charge a fee for access, users
>bail in droves.(read:napster) The notion that "ANYTHING will sell ads on
>the net" is idiotic. Most people don't even notice banner ads and such
>anymore... they just blend into the background.

You're incorrect. Advertising works rather well when done properly.
Supermarkets which sucessfully advertise have more customers than those who
don't, even if they have higher prices on most items. Walmart doesn't stay in
business by not advertising, and neither does Kmart or Sears. It's a good bet
if you drive, that you drive a vehicle which is advertised. Some advertising
doesn't work, but that's usually the fault of the advertiser.

People bail out once things are charged for because the fee charged probably
exceeds the value of the item to them. Gamblers might well pay to get a
college basketball sports package on the internet as might a few rabid alumni,
but it won't sell to most folks. The question thus becomes how much money can
a surcharge generate over what you can get advertising. Radio advertises in
part because it can't encrypt sucessfully, and I remind you of all the attempts
to get subscription television failed. Cable worked, and satellite might work
in part because people want the service provided and are willing to pay some
set fee per month.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

>>ALSO...does ANYONE know the occassions in American
>>History of a FLASH being sent over the UPI and AP broadcast
>>wire? I know of 3 on JFK, 1
>>for the Moon shot in '69, 1 for NIXON RESIGNS in '74.....does

I put a few pieces of UPI wire copy on this page:

http://members.aol.com/jeff560/upi.html

including two flashes on the moon landing (one for the actual landing and one when Armstrong set foot on the moon).

The UPI broadcast wire did carry a two-word flash when Nixon announced his resignation: FLASH NIXON RESIGNS

There have probably been quite a few flashes on the UPI broadcast wire, as I kept these:

When Pope John Paul II was chosen pope: FLASH POPE ELECTED

From 1968: FLASH MIAMI BEACH --- NIXON NOMINATED

And, related to the Nixon resignation, but about a week earlier:

FLASH COMMITTEE VOTES NIXON IMPEACHMENT

Hi Steve:

Boy I wish I had the equipment to play them. They are something I
really have an interest in. I guess I could go through my tapes and
come up with some halfway decent to poor cassettes of beautiful music
stations from the late 60 early seventy era. Regarding such stations
now there is KWXY which has a internet feed but they call it beautiful
music but its not the typical format and WMUU which is mostly
instrumental.

Best Wishes,

Tony

1605. Solar Flare Wipes Out AM Band

Newsgroup: rec.radio.broadcasting
Date: 2001-04-02 16:17:22 UTC
From: Brad Lovett <bluvit@yahoo.com>
Message-ID: <tch9gipraqved3@corp.supernews.com>
Source record: 14865

A major solar flare that exploded sometime 3/30 all
but blacked out skywave reception on the AM band
Saturday morning, 3/31. Only the locals were audible,
and some of those nearby but not in the immediate
area, which are normally wiped out by interference
were in the clear (from Dayton, OH: WMOH-1450,
Hamilton and WPTW-1570 Piqua, as well as WUCT-1270
Marysville and WCIN-1480, Cinn., were all weak but
interference free. On the Art Bell show it was
mentioned, as well as reports of Aurora Bourealis as
far south as Phoenix. (unfortunately a cloudy night
for me). A caller to the "Truckin' Bozo" show, which
originates at WLW-700 but is also heard on several
other high powered stations, reported he could hear
nothing but WBT-1110, Charlotte, NC from TN. One of
the only skywave stations I could get, KXEL-1540,
Waterloo, IA, was running a syndicated show, and
playing a country song about the "Aurora Bourealis".
Saturday evening the same conditions returned, not
even a KXEL or WLAC!I did hear a VERRY weak Marti' on
1180. By midnight things started returning to normal.
Y'all hear (or not hear) anything interesting?...Brad.

It is. Other distant memories of mine are of a guy named General David
Sarnoff who liked amplitude modulation so much that he frustrated
other modulation schemes for years.

If he hadn't perhaps pulse code modulation wouldn't be such a foreign
concept today.

Can someone confirm for that that a radio station must put a city grade
signal level in the city of license by itself and not through a booster?

I noticed that classic hits 1.160 has changed format. They are also on 1.170 also, and calling it the twin. Where is the 1.170 transmitter? Never ever heard of such, but anything can happen in radio theese days I guess.

Actually, one of the subscription outlets in LA (ON-TV or Select TV, I forgot which)
lasted quite a while, about 5 years or so. But as more neighborhoods got wired for cable, the over-the-air subscription services kind of faded away...

I think the original message was thinking about a structural tophat -
such as at 980 in DC, rather than a wire hat using some distance of the
top guys and maybe some more wires inteconnecting them. The 980 top-hat
is a steel structure which must be 30 feet in diameter.

Bob Carpenter

Two west coasters with top hats immediately come to mind, KWJJ (1080) Portland, OR, and KYUK (640), Bethel, AK.

There's a four tower array with nice beefy top hats just north of Charlottesville, VA, WCHV (1260).

Is it not possible that the top sections of the top guy wires could be
used as "stealth" top hats? It would be hard to detect this visually.

>Your representatives said in their testimony to the Senate committee
>that the 2 year term of my no-compete was "not enforceable".

Might I ask just how you managed to sign a contract which allowed an employer to terminate your employment and then determine where you could work after being terminated? I also wonder just how you discovered said contract would or could be enforced. A short albeit probably somewhat costly visit to a lawyer specializing in labor law probably should deal with any questions you have, rather than relying either on the word of an industry spokesman, or an employer who tried to slip in terms which were unenforceable.
